TroubleShooter

High-Speed Digital Cameras for Factory or Field Troubleshooting
The TroubleShooter offers outstanding image quality in a compact, point-and-shoot package. Priced to fit demanding budgets, the TroubleShooter high-speed camera saves time and money on the production line and simplifies slow-motion research... right out of the box. TroubleShooter helps manufacturers improve operational efficiency by reducing downtime and waste while university researchers are able to quickly and easily analyze human and animal movement.
See how TroubleShooter high-speed cameras meet your needs quickly, easily and for much less than you might expect!

TroubleShooter LE - Record For Hours . . . Save Only What You Need

Point & Shoot High-Speed Camera

TroubleShooter LE is a low-cost “Point & Shoot 1000 frame-per-second digital video camera with built-in display screen, USB 2.0 connection and CompactFlash download.
Capture thousands of images with the push of a button; review them on the built-in screen and save them to a Compact Flash card. No more heavy battery belts or power adapters with the LE’s convenient built-in battery pack. See What You’ve Been Missing!

InLine - Record For Hours . . . Save Only What You Need

Network-ready High-Speed Camera for Production Monitoring The InLine camera

is a network-ready high-speed camera for production line monitoring and machine vision failure analysis. Users can analyze and reduce jams, build a historical database of machine performance and correlate with machine vision systems to show exactly why items are rejected so that adjustments can be made to the production line. Using advanced software and triggering techniques, the InLine captures line stoppages and automatically downloads the images, via gigabit Ethernet, to a pre-selected computer on the network for analysis.

Fastec HiSpec **Innovative Low-Light High-Speed Camera**The HiSpec is an innovative low-light, high-speed video camera with Gigabit Ethernet compatibility. The unprecedented photo-sensitivity of the HiSpec enables high speed recordings at 1.3 megapixels under normal lighting conditions.A unique software-based auto-trigger and burst-trigger recording mode enable the user to capture hundreds of image sequences in the memory without downloading. Multiple events can easily be recorded over an extended period of time.
