Self regulating heating pad

Animal biologists performing surgical or physiological experiments on anesthetized animals prefer that the core temperature of the animal be maintained at ~37° C. This economical self regulating heating pad servo controls the temperature between the anesthetized animal and the surface of the heating blanket at a precalibrated level, so that the core temperature of the animal is kept at ~37° C. This unit has been designed to self regulate the interface temperature at 37.0° +/- 0.5° C under the following conditions: the animal is anesthetized (tail pinch and corneal reflexes absent), is unshaven, with an ambient room temperature of 21° C. Fine adjustments can be made by recalibrating the regulator box with the use of a small screwdriver.

The unit consists of the self regulating heating pad which is supplied with a 6 foot cord, which connects to the regulator box, which then leads to a low voltage 12 VDC wall adapter. FST can supply the required plug and voltage converters for most countries. These heating pads come in three sizes. They are safe, durable, pliable and easily cleaned. The small size (10 cm x 25 cm) will fit neatly into a rat stereotaxic frame.

Specifications:

Dimensions:
Small Pad: 10 cm x 25 cm
Large Pad: 22.5 cm x 50 cm
Mouse Pad: 8.5 cm x 11 cm
