NTS-4000-GPS-R

NTS-4000-GPS-R

A complete solution for synchronising the time across computer networks. The NTS-4000-GPS-R NTP Time Server combines a GPS receiver with an embedded solid state computer and offers straight forward configuration and management via a network interface.

Click here for a quote - Contact us now!

Key Features

- Ready-to-operate Secure Stratum 1 NTP Time Server
- Support for NTP and SNTP compatible clients
- Configured across network via a windows configuration utility
- Flash memory enables software to be upgraded
- RJ-45 Ethernet interfaces 10/100 MBit
- Front Panel display for Time and Satellite Status
- Digital wall clocks synchronised via network are optional
- Includes GPS active antenna
- Standard GPS antenna cable length up to 200m (600ft) with option to extend to 1,000m (3,000ft) if required
- SNTP and NTP support
- Syslog error reporting

The NTS-4000-GPS-R is a standalone "ready-to-run" NTP time server for TCP/IP networks, which comes with network based interface for management and configuration.

The IP address of the unit can be configured by using DHCP to assigning an IP address automatically or a fixed IP address can be used. A display shows run-time information for both the GPS subsystem and the NTP server.

The NTS-4000 can handle more than 300 NTP requests per second, making it the choice for providing accurate time information

Connects directly to Ethernet, fits in a standard 19" rack, incorporates a GPS Computer Clock, tracks up to 12 satellites, with remote GPS antenna that can be positioned up to 200m (600 ft) away as standard, or up to 1,000m (3,000ft) with optional antenna extension kit. With LCD signal strength display for easy installation, an integral time display and Ethernet CAT5 connection. Software driver for uni-cast,broadcast or multi-cast NTP time synchronization. Conforms to Network Time Protocol.
