506C System Interface

Product Resources »

[Brochures](#)

[User's Guides](#)

The Gilson 506C System Interface connects your computer to many Gilson instruments. It permits bi-directional communication by interconverting the RS-232 signal levels used by computers and the RS-422/485 signal levels required by the Gilson Serial Input/Output Channel (GSIOC).

- Provides four contact inputs and six contact outputs that allow your computer to control instruments not equipped for GSIOC operation
- The state of the contacts can be read or changed using appropriate software (such as Gilson control software)
- The system interface incorporates four analog data inputs that can be read by the computer via the GSIOC
- Using these data inputs, your computer can read the signal from any detector or monitor that provides a -100 mV to $+1.0\text{ V}$ analog input
- Includes a socket for installing the security key required to operate most Gilson software products
