DaVinci VIDEO

Ultra High Video Graphics PMC Module

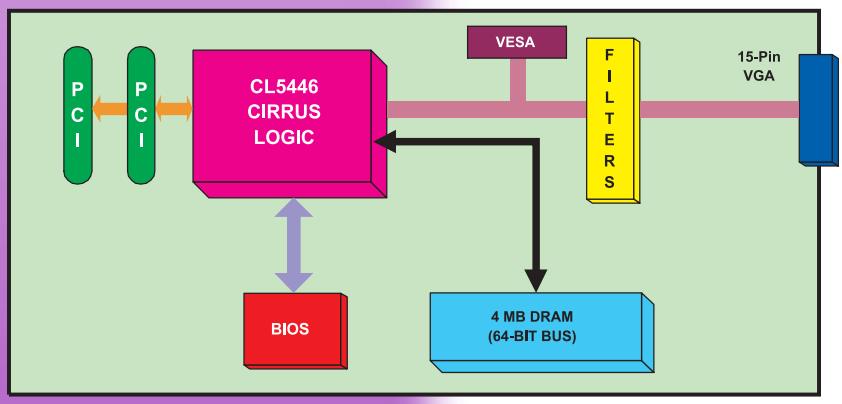

Key Features:

- Provides Ultra High Resolution Video Graphics on a Single PMC Module
- Support for 1280x1024 at 16 Million Colors
- 64-BitBLT Graphic Engine with 2/4MB of RAM
- Support for Windows NT®, VxWorks®, QNX® and Linux® Operating Systems
- Single +5V Operation
- Onboard Video BIOS

ISO 9001 REGISTERED

PROUDLY MADE IN THE USA GSA APPROVED

General DESCRIPTION

The GMS "DaVinci" PMC Video module, is a high-resolution video display and graphics module for embedded systems that are equipped with PMC (PCI Mezzanine Card) expansion slots. Supporting display resolutions of up to 1280 x 1024 with 16 million colors, the GMS PMC Video features a 64-bit BitBLT graphics engine equipped with either two or four Mbytes of RAM.

GMS PMC Video targets embedded industrial and military applications like factory automation, telecommunications, imaging, and pre-press that require a rugged high-resolution video display. GMS PMC Video can be installed on any baseboard that provides PMC expansion slots, including General Micro Systems' own family of VMEbus, or CompactPCI CPU boards.

GMS PMC Video provides an inexpensive means of adding high-resolution video to baseboards not so equipped. GMS PMC Video may also be used to add a second video port to baseboards already equipped with video. This option is ideal for applications like CAD, video editing and telemetry that require two monitors. In a CAD application, for example, designers typically use one monitor to work on their drawing, and one to display the CAD tool menus. Similarly, in a video editing application, one screen could be used to display the editing toolbox, with the other used to display the source footage and output.

GMS PMC Video features a 32-Bit PCI bus interface with bus master capability and meets all IEEE-P1386 specifications for single-slot operation. GMS PMC Video also provides a standard 15-pin DIN video connector, which eliminates the need for custom cable assemblies.

To simplify integration with the baseboard, the GMS PMC Video comes ready to run with an onboard video BIOS and is supported by Windows NT®, VxWorks®, QNX®, and Linux® operating systems. GMS PMC Video complies fully with the VESA standard for monitor timing and operates from a single +5V supply.

Application areas include:

❒ Industrial ❒ Military ❒ Telecommunications
❒ Pre-Press ❒ Aerospace ❒ Medical ❒ Imaging

GMS Profile:

Since its founding in 1979, General Micro Systems, Inc. (GMS) has been a leading supplier of high-performance, embedded, single-board computers for applications ranging from aerospace and defense, to imaging and telecommunications, and industrial control. Today, GMS offers a broad range of highly integrated VMEbus and CompactPCI single-board computers based on high-performance microprocessors such as the Pentium®, 68K, PowerPC®, ColdFire®, and SPARC®. The company also supports a variety of popular operating systems, including Windows NT, VxWorks, QNX, Solaris x86, and Linux.
