The DMS1000 changed the world of recorders when it was introduced. It was the first machine that allowed 32 or more channels...plus a wide format printer for real-time output...and allowed you to create any chart design you could imagine...and included a macro generator for complete system automation...and so much more. The DMS1000 - or "Mark 12" as it is commonly known - was an innovation then, and still remains unmatched among similar products. Now, for a limited time, quantities of this break-through product are available. If you already have a Mark 12 or two, and would like to augment your arsenal before there are none left, please contact us today. Time is running out, so please contact us today!!

Main Features

- Up to 48 channels per system!
- Standard M12-TR transient capture card and 512 kS of RAM for data capturing
- Includes special data search software - find captured data by slope, ampltitude, frequency, dv/dt...then view and/or export selected areas to other media
- Bandwidth (frequency response): Varies according to the input amp used
- Optional SCSI interface plus internal and external hard drives for massive data storage
- 200 kS/s sampling rate on all channels
- Standard video display and graphical user interface
- PCM-CIA slot and memory card is standard
- Windows control and data upload software included

Options & Upgrades

- M12-4E four-channel input card (see photo at right), 14-bit ADC's, on-board DSP, programmable zero suppression and filtering, selectable RMS recording mode, selectable anti-aliasing filtering
- M12-TCT time code card interface for NASA and IRIG time codes
- M12-SCSI interface for connecting one internal and many external SCSI drives
- M12-IH8000 8 GB internal SCSI HDD
- M12-EH8000 8 GB external SCSI HDD (daisy-chainable)
- M12-2M memory upgrade for transient capture - up to four modules can be installed for 8 MS of capture memory
- PZ-1000 chart paper

Input Versatility
The M12-4E input cards plug into the back of the Mark 12, providing up to 48 input channels per system. If your inputs are only digital, the Mark 12 can have 64 input channels. Each input channel also comes with an event marker and a line of alphanumeric text that can be placed anywhere on the chart (see below).

The most versatile chart ever
You can place any trace anywhere on the paper, and make it any size...how's that for versatility? Nothing else on the market equals this Mark 12 innovation. When you need the ability to set up the machine completely the way you want, there is only one choice! Convenient jog dial and buttons along the right side of the LCD display make setup and operation fast and easy.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
