ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

Powerful Products for Communications

V4F CPU Board

VME Board for Embedded Real-Time Applications

- 33 MHz MC68040 CISC processor for high-speed integer and floating point performance
- 8 or 16 Mbytes of 2-way interleaved DRAM
- Optimized VME64 interface for demanding multiprocessing applications
- Master/Slave VSB interface for efficient bus utilization
- Flexible Corebus expansion bus fits standard and custom modules
- Two front-panel serial interface ports for flexible I/O
- In-house support for VxWorks and OS-9 real-time operating systems and development environments
- Quality assured by more than 20 years of experience, ISO 9001 certification and exclusive Gauntlet testing

---

Heurikon's HK68/V4F CPU board is designed to be a platform for a wide range of embedded real-time applications, including simulation, image processing, printing, data acquisition and industrial control. The V4F's VSB interface complements the VME interface by providing a private data transfer bus for images and other data records.

Based on the industry standard Motorola MC68040 processor, the V4F offers excellent floating point and integer performance at a low cost. The V4F's Corebus mezzanine interface allows flexible expansion through standard or custom modules. The Corebus interface offers a full 32-bit data path operating synchronously with the system clock to allow the addition of high-performance I/O or coprocessors.

The V4F is ideally suited for applications requiring multiple processors in the VME backplane. Heurikon verifies the design of its CPU boards in a rigorous test suite called the Gauntlet. The Gauntlet consists of a series of tests for arbitration, interrupts, and data transfers, all executed in a fully-loaded 21-slot VMEbus backplane over an extend time period. Wind River Systems' VxWorks and Microware's OS-9 software provide users with powerful real-time operating systems and a rich set of development tools.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
