Overview

The PCI - 3346A is a product with 12 - bit DA conversion function conforming to the PCI bus.
The DA conversion settling time is 10 μs per channel. The number of output channels is 16 channels, and the output range of each output channel can be set to ± 5 V, ± 10 V, 0 V to +10 V for each channel.
In addition to software timing, DA conversion can be performed periodically by programmable timer.
