

ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

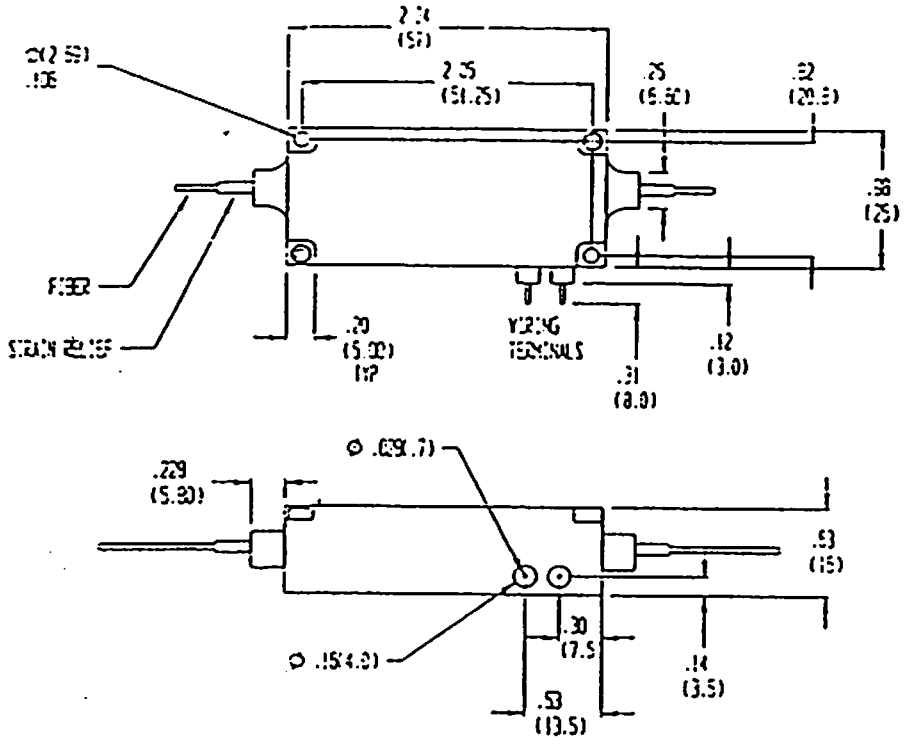

Expert team | Trust guarantee | 100% satisfaction

JDS Uniphase

TB 2500 Tunable Fabry-Perot Filter

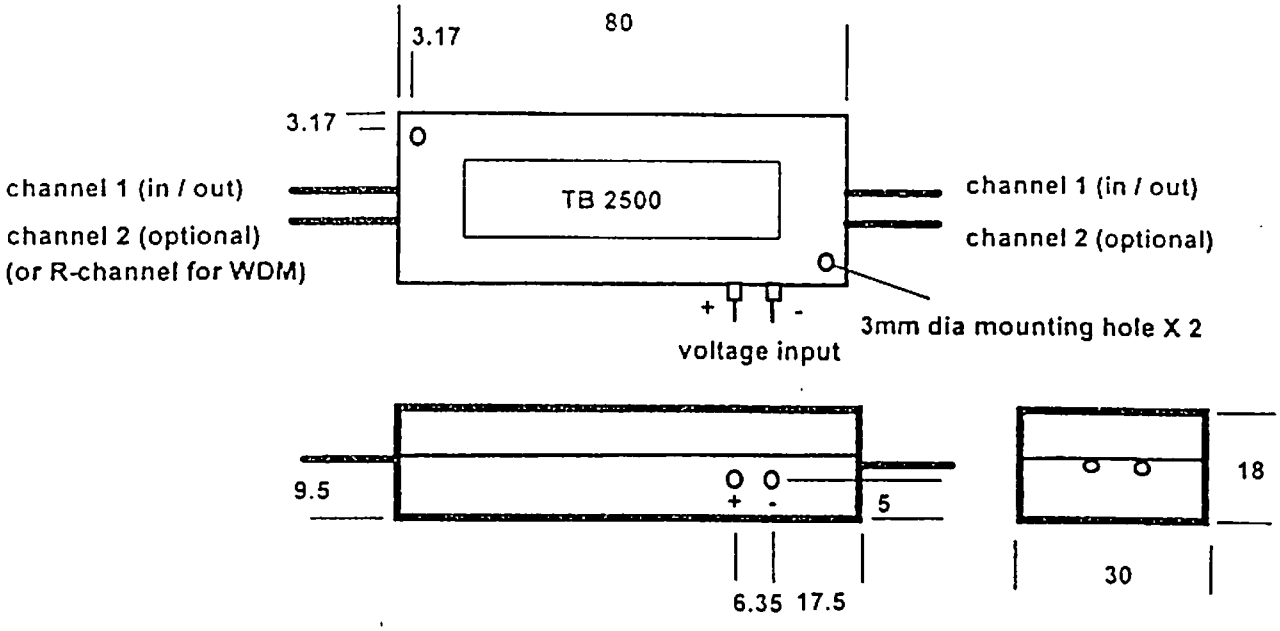

General Handling and Operating Instructions:

(1) Handling: Although the TB2500 Fabry-Perot Filter is a rugged component, severe mechanical shock (e.g. generated by dropping the device from a height) could cause permanent damage to the filter. Therefore, as with other optical components, the TB2500 filter should be handled with care during mounting and setup of the device.
(2) Voltage Polarity: Apply voltage of positive polarity to the input terminals only (red +, green –). DO NOT apply voltage of negative polarity as this may result in damage to the piezo actuator inside the package. Avoid sudden current surges, such as caused by shorting the terminals or connection to a high-current power supply.
(3) Input Voltage Range: Applying 0 to +30 volts to the input terminals of the Fabry-Perot filter will tune the device over 3 to 4 wavelength orders (or Free Spectral Ranges).
(4) Mounting: Two 3mm diameter mounting holes are provided for fixing the unit onto test jigs or printed circuit boards.
