AWC100 Air-to-Water recirculating cooler

JULABO's Air to Water recirculating cooler AWC100 is an extremely compact solution, designed to remove small heat loads from external systems such as from Peltier-elements. The highly competitively priced AWC100 features a compact footprint and is designed specifically for applications where cooling water can be above ambient and where temperature control is secondary.

The ventilator speed can be increased by changing the switch for booster cooling on the rear of the unit. Stage 0: normal cooling capacity, virtually noiseless. Stage 1: higher cooling capacity, higher ventilator speed.

Product features

- Hassle-free operation
- Connect, switch on and get started
- Small footprint
- Virtually noiseless
- Economical
