JUMO Etemp B

Screw-in RTD temperature probe with connection head form B for standard applications

- Temperature range from -50 to +400 °C
- With built-in measuring insert
- As single or double RTD temperature probes
- Terminal head form B or BUZ
- Available with transmitter

Basic type 902023/10

Brief description

Screw-in RTD temperature probes for standard applications are preferentially used for measuring temperatures in liquids and gases. A decisive selection criterion is the reliable sealing feature of this installation type with vacuum and with overpressure. The application areas are, among others, in the air conditioning technology and refrigeration engineering as well as the HVAC and apparatus engineering sector.

The connection head is suitable for ambient temperatures up to +100 °C. In addition to the standard connection head form B, design BUZ is also available.

The measuring insert is normally fitted with a Pt100 temperature sensor according to DIN EN 60751, Class B in 2-wire circuit; versions with Pt500 or Pt1000 temperature sensors can also be supplied, as well as 4-wire circuit connections. A transmitter can be optionally integrated into the connection head.
