

ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

Semiconductor test system switching for characterization and reliability

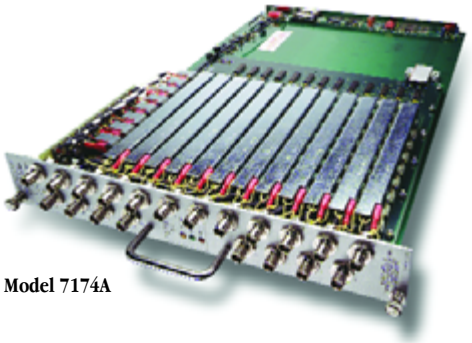

OUTSTANDING LOW CURRENT MATRIX CAPABILITY

Model 707A and 708A—large-scale matrix systems for world-class low current performance

The Model 707A and 708A provide outstanding low-current matrix capability and let you control up to 2880 channels or matrix crosspoints in real time. Their large matrix format makes them well suited for your large ATE system applications such as semiconductor device characterization, wafer level reliability, parallel test, and modeling. They are most often used in conjunction with Keithley's Model 4200-SCS semiconductor characterization system and Model 590 and 595 C-V analysis instrumentation.

Features:

- Fully configurable and controllable from the Model 4200-SCS characterization system front panel—for seamless integration in I-V and C-V applications.
- Easy integration with the Agilent 4155/56—gives industry wide compatibility.
- High capacity—with up to 6 cards linked via the Model 707A backplane you can build pin configurations of up to 8 rows × 72 columns per mainframe.
- Expandable—up to 5 mainframes can be connected through the master/slave feature and controlled from a single GPIB address.
- Fully interactive front panel with optional light pen control—for simple configuration in stand-alone applications.

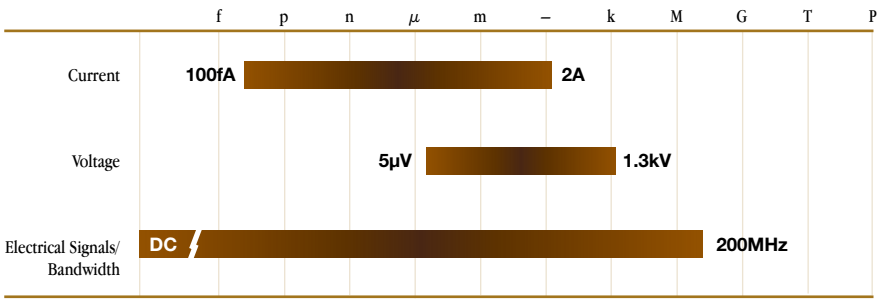

Model 7174A

Specifications of Model 707A/708A:

- Supports up to 576/96 channels, expandable to 2880/480 channels.
- Contains 6/1 card slot(s).
- Scans 200 channels/second.
- Contains 100 memory locations.
- Includes 16/8 digital inputs and 16/8 digital outputs.
- Fits into a 19 inch rack and is 14/3.5 inches high.

Switch/control cards for the Model 707A and 708A

A family of more than a dozen switch/control cards designed for semiconductor characterization applications can be used in the Model 707A and 708A. Some of the switch cards are general purpose like the Model 7071, while others have very unique capabilities, such as the Model 7174A card, which is an 8 × 12 configuration with 10fA typical offset current on all signal paths. The Model 7072 card combines low current and high frequency capability for C-V characterization to 1MHz.

Range of signals supported by the Model 707A and 708A switch/control cards

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
