OPTIONS 070/071

120/350 Strain Gauge/Bridge Completion Assemblies

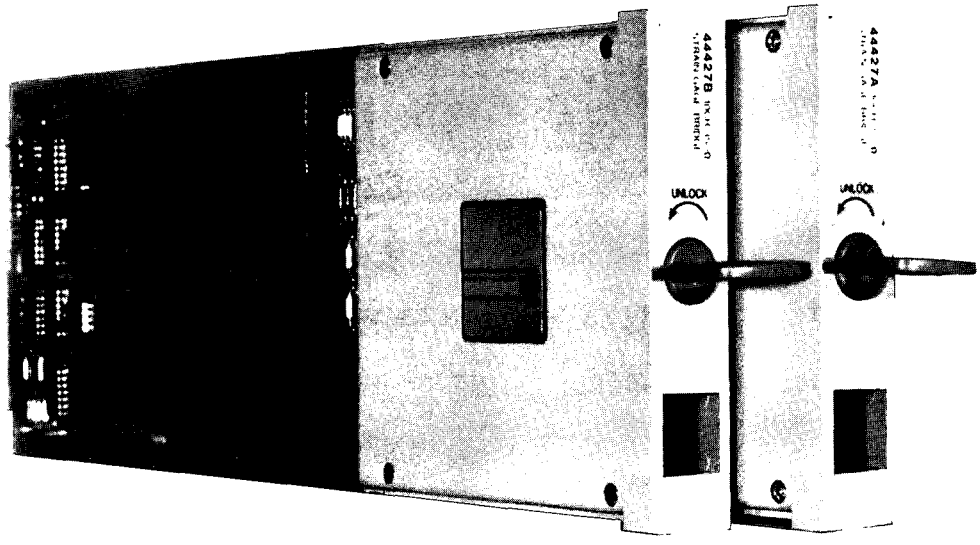

Description

The Strain Gauge/Bridge Completion assemblies provide bridge completion for strain gauges and other transducers, such as RTDs, pressure sensors and load cells. Each assembly can measure up to 10 bridges. You can measure up to 500 strain gauge channels or up to 166 three-element rosettes.

You can terminate any mixture of ¼, ½ or full-bridge circuits on the assembly. However, to compute strain, this assembly must be used with a controller.

Applications

Use the Option 070/071 assemblies to measure the outputs of strain gauges and three-element rosettes. Since these assemblies can be used in the same mainframe as other plug-in assemblies, you can mix strain measurements with other 3497A functions. For example, you can generate apparent strain curves by measuring temperature with one assembly and strain with another.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
