OPTION 110

Actuator/Digital Output Assembly

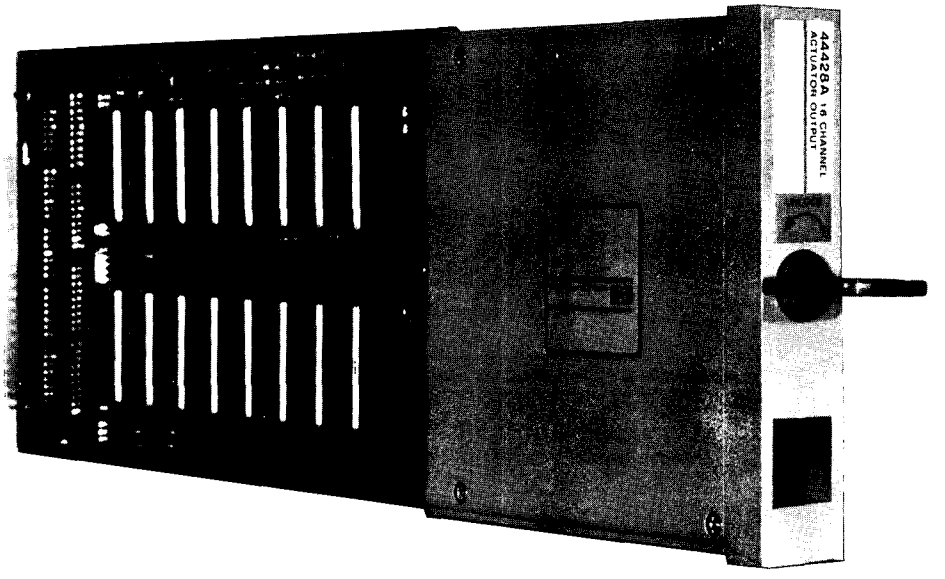

Description

The Option 110 assembly consists of 16 channels of single-pole, double-throw relays. The assembly has two different modes: actuator mode and digital output mode. In the actuator mode, each channel relay can be closed to switch power to (actuate) an external device. The relays can switch up to 1 Amp at 100 volts (peak).

In the digital output mode, each relay can be set open (logical 0) or closed (logical 1) to provide a 16-bit wide digital output.

Applications

Since the Option 110 assembly can switch one amp at 100 volts, it can be used to switch test fixture power or to actuate alarm bells. The assembly can be used with the 16 Channel Isolated Digital Input/Interrupt assembly (Option 050) to provide an independent digital input/output port.
