Printing History

New Editions of this manual incorporate all material updated since the previous edition. Update packages may be issued between editions and contain replacement and additional pages to be merged into the manual by the user.

The manual printing date and part number indicate its current edition. The printing date changes when a new edition is printed. (Minor corrections and updates which are incorporated at reprint do not cause the date to change.) The manual part number changes when extensive technical changes are incorporated.

January 1994 ... Edition 1

Electrostatic Discharge (ESD) Precautions

Electrostatic charges can damage the integrated circuits on printed circuit boards. To prevent such damage from occurring, observe the following precautions when unpacking and installing the board.

- Stand on a static–free mat.
- Wear a static strap to ensure that any accumulated electrostatic charge discharges from your body to ground.
- Connect all equipment together, including the static–free mat, static straps, routing nodes, and peripheral units.
- Keep uninstalled printed circuit boards in their protective antistatic bags.
- Once you have removed the printed circuit boards from their protective antistatic bags, handle them by their edges.

General Information

Product Overview

Features

Hewlett−Packard's Model 712 Workstation is based on a 7100LC central processing unit (CPU) it provides a variety of interfaces, graphics, and mass storage.

Table 1−1. Model 712 Features

Features	Functionality
Operating system	HP–UX 9.03 (or later)
CPU	PA–RISC PA7100–LC
	Model 712/60 / Model 712/80
Frequency	60 MHz / 80 MHz
Performance	
SPECint92	58.1 / 84.3
SPECfp92	79 / 122.3
X11Perf	≥12K / ≥17K
Cache	64 KB / 256 KB
Time source	Battery–backed Real–Time Clock
Memory	4 slots 16 MB minimum required Upgradeable to 128 MB
Built–in interfaces	HP Parallel, SCSI–2, AUI & TP LAN, PS/2 Ports for keyboard and mouse, RS–232C, Headset Out, Line & Microphone In, Video out
Graphics	Depending on the monitor selected: ■ 8–bit Color (with Color Recovery) ■ 1024 by 768 resolution standard ■ 1280 by 1024 resolution with VRAM card ■ 15 pin PC VGA style female connector
Internal Mass storage module(s)	Optional 3.5–in. Flexible disk drive and Hard Disk Drive ■ 260 MB, 525 MB, or 1 GB Hard Disk Drives ■ PC style 3.5–in. Flexible disk drive
70–Watt Power supply	Low power consumption design

Downloaded from www.Manualslib.com manuals search engine

Memory

Standard memory is 16 MB of 70ns Error Checking and Correcting (ECC) RAM boards. 16 MB is the minimum required for HP−UX operating system. Each workstation has four RAM slots. Options may add more factory installed memory. Memory must always be added in pairs. Memory upgrades include:

HP A2577A 8 MB RAM Upgrade, two 4 MB RAM boards.
HP A2578A 16 MB RAM Upgrade, two 8 MB RAM boards.
HP A2829A 32 MB RAM Upgrade, two 16 MB RAM boards.
HP A2827A 64 MB RAM Upgrade, two 32 MB RAM boards.

Mass Storage

Internal

The Model 712 workstation can have an optional hard disk drive and an optional flexible disk drive factory−installed. Mass storage devices include:

HP A4065A 260 MB Hard Disk Drive Upgrade.
HP A4066A 525 MB Hard Disk Drive Upgrade.
HP A4067A 1 GB Hard Disk Drive Upgrade.
HP A4068A 3.5−in. Flexible Disk Drive Upgrade.

External

There are external storage devices that have been especially designed for the Model 712 workstation, they are the following:

HP A2655A External CD ROM Drive.
HP A2657A External 1 GB Hard Disk Drive.
HP A2656A External 2 GB DDS Tape Drive.

System Graphics

System Board Graphics

The Model 712 workstation comes with 8−bit color, 1024 by 768 resolution graphics. With use of an optional video RAM (VRAM) daughter card (HP A4025A), the graphics resolution can be increased to 1280 by 1024. The external video port is 15 pin VGA style connection. Table 1−2 lists the monitors supported.

Table 1−2. Supported Monitors

Product No.	Type	Resolution	Refresh Rate
HP A2882A	11.8–inch Flat panel	1024 by 768	75 Hz
HP D1196A	15–inch Color	1024 by 768	70 Hz
HP A2287A	17–inch Color	1024 by 768	75 Hz
HP A4032A	17–inch Color	1280 by 1024	Multi–Mode
HP A2094A	19–inch Color	1280 by 1024	72 Hz

Downloaded from www.Manualslib.com manuals search engine

Built−In Interfaces

System Board Interfaces

The system board's built−in interfaces have ports on the connector panel.

PS/2 Keyboard and Mouse Interfaces

There are two PS/2 style serial ports: one PS/2 keyboard port and one PS/2 mouse port.

HP Parallel Interface

The parallel port is compatible with PS/2 standards, plus some additional features found in HP Series 700 workstations. The basic PS/2 supports a bi−directional register model interface in addition to printer only DMA. There is support for both of these features in addition to providing the additional printer DMA handshakes found on Series 700 workstations. The register model interface will be able to support the new "Bitronics" printer interface. The Series 700 Scanjet interface will not be supported.

RS−232 Serial Interface.

There will be one PS/2 type serial interface. This standard interface is based on a 9−pin D−sub connector and supports CTS/RTS hardware handshaking. This port is based on the National 16550 serial interface chip.

Small Computer Systems Interface (SCSI−2)

The built−in SCSI−2 port is implemented using an NCR710 macrocell inside the I/O ASIC chip. This 8−bit single ended implementation is compatible with the current 700 series products and supports 5 MB/sec data transfer rates.

The SCSI bus is terminated to 3.3 volts through 127kΩ on the CPU board. The terminator must be removed from the internal disk drive. If an external disc drive is used an active terminator must be used on the drive at the end of the cable.

Local Area Network Interface.

The IEEE 802.3 Ethernet Local Area Network (LAN) circuit provides both the AUI interface for conventional coaxial Ethernet and a direct interface to a twisted pair (TP) 10BASE−T network. Only one interface can be used at a time, the system auto−selects the correct port that is being used. Ethernet is a 10 Mbit/s packet−switched serial interface employing Carrier Sense Multiple Access/Collision Detection (CSMA/CD). Table 1−3 lists the supported LAN adapters and other network devices.

Table 1−3.Supported AUI LAN Adapters and Devices

LAN Adaptor	Network Devices
HP 28641B ThinLAN Transceiver HP 30241A 10Base4 ThickLAN MAU	HP 28692A ThinLAN Hub Plus HP 28673A 10:10 LAN Bridge HP 28683A Fiber Optic Transceiver

Downloaded from www.Manualslib.com manuals search engine

Audio Interface

The 712 workstation provides compact disk quality audio input and output in stereo with a 16−bit CODEC (coder−decoder) over a frequency range of 25−20000Hz. A small internal speaker and a stereo headphone mini−plug (118Ω impedance) are provided for output. A stereo line−in and mono microphone mini−plugs are provided for input.

Some of the audio features and specifications are listed below:

- Programmable rates of 8, 11.025, 16, 22.05, 32, 44.1, and 48KHz.,
- Programmable output attenuation of 0− 96db. (1.5dB. steps)
- Programmable input gain of 0−22.5dB. (1.5dB. steps)
- Input monitoring
- 16 bit linear, 8 bit μ −Law , or A−Law coding
- Signal to Noise of 61dB. for Headphone and Line In and 57dB. for Microphone
- Input sensitivity 2.0V_{pk} (47kΩ) Line−In and 22mV_{pp} (1kΩ) Microphone
- Headphone Max. output level of 2.75V_{pp} (50Ω)

A Digital Signal Processor (DSP) based option card is provided to enhance the audio subsystem by providing phone and modem functions. Other special DSP applications can also be down−loaded to this card.

Expansion Slot

The expansion I/O slot connects to the same signals on the General System Connect (GSC) as does the I/O ASIC. Arbitration signals are provided so that the expansion slot can be a bus master. On the Model 712 Workstation, the expansion slot will be used to provide an optional IEEE 802.5 (token ring) or a second IEEE 802.3 (ethernet) network connection, or other optional I/O interfaces that are covered in Chapter 3.

HP Teleshare Slot

The Teleshare slot will accommodate the HP Teleshare card that is composed of two complete telephone interfaces. One interface could be devoted to voice applications, and the other could be equipped with V.32bis and V.42bis data modem and fax. In addition to these features, Teleshare will include:

- Caller ID
- Call Waiting
- Conference Calling
- Data Rate conversion and mixing
- Call Recording and Voice Mail
- A multitude of DTMF–based applications

**Note: Some of the features listed such as Caller ID and DTMF−based applications might not be supported by all international phone systems.

Downloaded from www.Manualslib.com manuals search engine

Hardware Architecture

Most of the functionality is on one assembly, the system board. The system board has the interface controllers, CPU circuits, memory controller, and graphics/video circuits. RAM boards plug into sockets on the system board.

Operating System

HP–UX

HP−UX 9.03 (or later) is supported on the Model 712 workstation. It is booted from an internal hard disk drive factory installed with Instant Ignition. HP−UX may also be installed from external DDS or CD−ROM drives. If the workstation is a client on LAN, HP−UX can be booted over the LAN.

Table 1−4 lists the HP−UX operating systems and languages for the workstation.

Table 1−4. HP–UX Operating Systems and Languages

Operating system:	HP–UX 9.03 or later. HP–UX complies with the UNIX® System V Interface Definition X/Open and POSIX Specifications and will be fully compliant with Operating Systems Foundation (OSF)
Languages	C/ANSI C FORTRAN 9000 Pascal HP C++ C++ Developer
User Interface and Graphics Libraries	HP GKS X11R5 Motif 1.2 VUE 3.0 Architect 2.0

Downloaded from www.Manualslib.com manuals search engine

Product Identification

On the back of the Model 712 workstation, a label lists the product's serial number. The information can be interpreted as shown below for an example serial number 6247A00001:

Environmental Specifications

With Internal Mass Storage

Temperature

Operating: 5 to 40deg. C; 20deg. C/hr rate of change maximum
Non−operating: −40 to 60deg. C

Altitude

Operating: 3050m (10,000 ft)
Non–operating: 4600m (15,000 ft)

Shock

Operating: 30 in/sec − approx. 60 G peak < 3.0 msec half sine wave or 5 G < 11.0 msec half sine waveform. (This is less severe than class C1).
Survival (non−operating): 292 in/sec − approx. 30 G peak < 25 msec trapezoidal waveform
Packaged (non−operating): 30” freefall, 10 impacts (6 faces, 4 bottom corners).

Vibration

Operating Random: 0.21 G rm
Survival Random: 2.09 G rms
Survival Sine: 0.5G peak, 5−500 Hz

Noise Output

Less than 4.4 Bels Sound Power Level at 5−30deg. C ambient temperature.
Less than 5.2 Bels Sound Power Level at 30−40 deg. C ambient temperature.

Reliability

The estimated Annualized Failure Rate (AFR) is based on parts count and the failure rates of those parts in similar products. The AFR is estimated from the sum of the failure rates of the components assemblies. A key assumption is that AFR is constant beyond the early life of the product and before long−term wear out.. Mean Time Between Failures (MTBF) is the reciprocal of the AFR.

Projected Failure Rate is the mature AFR, estimated from the failure rates of the components of the product. The ‘Estimated Long−Term Annualized Failure Rate’ is a future projection of

Downloaded from www.Manualslib.com manuals search engine

an average realistic failure rate beyond the typical infant failure period which occurs in the first few months of use and before long−term wear out which occurs after many years of use. This product assumes an 8000 hour usage year, which is 91% duty. Actual customer experience may vary slightly.

Table 1−7. ATF and MTBF

Product	Configuration	AFR	MTBF
Model 712	16 MB, no mass storage	9.30%	10.75 years
Model 712	16 MB, with mass storage	13.3%	7.5 years

Air Flow

The Model 712 workstation is cooled by forced convection. One dual−speed 80mm DC fan provides the airflow across the entire operating temperature range. Airflow is primarily front to back. The total airflow through the box is approximately 12 CFM, with about 3.6 CFM of that air going to the power supply. At 30C ambient temperature, the fan switches to its faster speed for more efficient cooling.

In order to cool the bottom side of the system board, there are holes in the sheet metal chassis along the bottom edge to allow a small amount of air to travel under the processor. The PCX−L processor requires a heatsink. The heatsink is an extruded aluminum cross−cut design to maximize the heat dissipation.

Technical Drawings and Schematics

These drawings are available by request through your Hewlett−Packard Sales Representative. Ask for the drawings you need by referencing them by Name and Drawing Number.

Table 1−8. Mechanical Drawings and Schematics

System Board

Functional Information

Diagnostics

Self−Test and Extended Self−Test

Self−Test is provided by the BOOT ROM and is executed as soon as the workstation is powered on. After power−on and boot, the front panel LED will flash, three quick flashes pause and repete if there is something wrong with the graphics subsystem. If the LED flashes in a three quarter of a second pattern the CPU is defective. Your system will run a series of diagnostic tests to check the hardware configuration. Figure 2−1 illustrates what you will see.

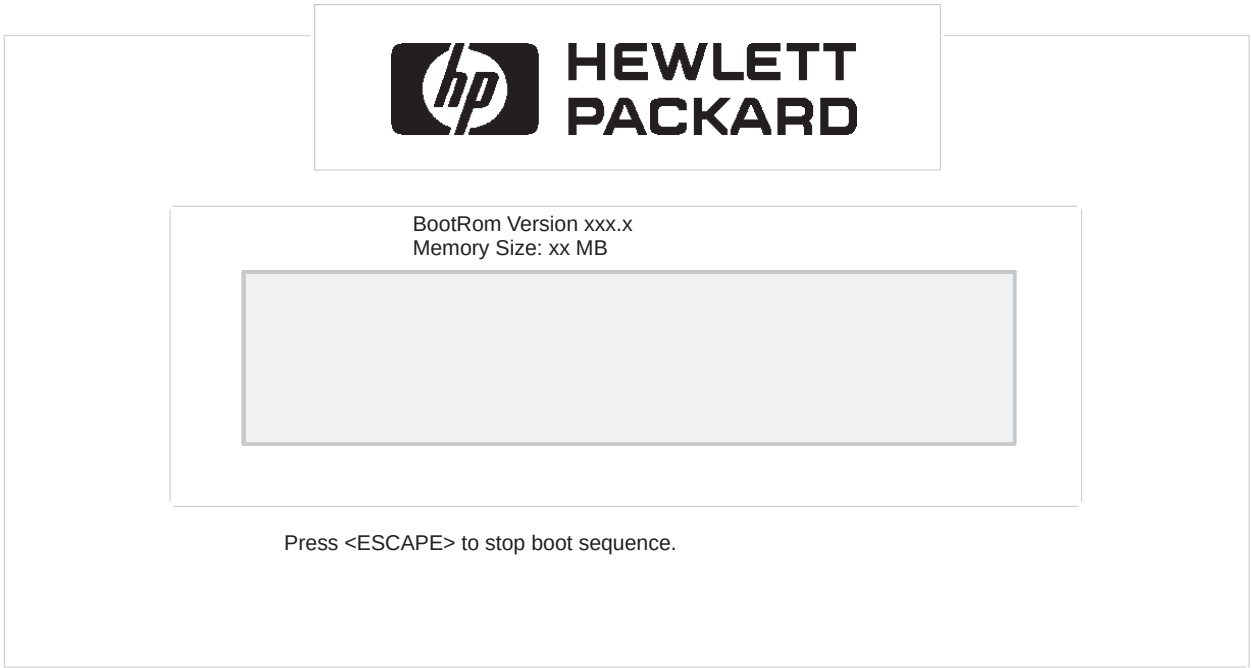

Figure 2−1. I/O Test During Self−Test

If an error occurs during the self test, you will see a second screen depicting an overview of the system unit components, as shown in Figure 2−2.

Downloaded from www.Manualslib.com manuals search engine

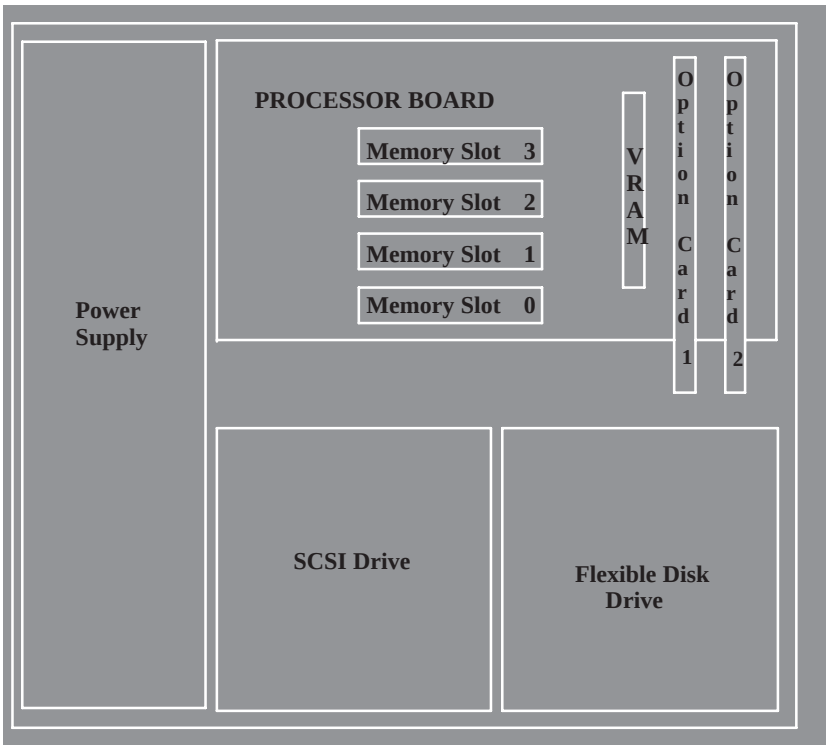

Figure 2−2. Self−Test Error Display

The defective component is highlighted on the screen. To the right or below the diagram, the self test calls out the defective component.

SupportWave Diagnostics

HP−UX uses a diagnostics product called SupportWave. SupportWave contains the Support Tools Manager so that you can verify your system operation.

As a superuser (logged in as **root**), you can access the Support Tools Manager while in a terminal window. If you are using HP VUE as your interface, you can also access the Support Tools Manager through the **sys_admin** directory.

Three interfaces are available with the Support Tools Manager: a command line interface (accessed through the **cstm** command), a menu−driven interface (accessed through the **mstm** command), and the graphical user interface (accessed trough the **xstm** command).

For more information on SupportWave user interfaces, see the online man pages by entering the following at a command line prompt:

man cstm
man mstm
man xstm

Downloaded from www.Manualslib.com manuals search engine

Interface Specifications

LAN−AUI and LAN−TP

IEEE−802.3 is an industry standard network used to connect HP and other vendor's systems together. Besides the built−in Twisted Pair (TP) and AUI connections, the system board provides connections to several alternatives via an AUI connector. Through this connector, the customer chooses the MAU (Media Access Unit) adaptor or transceiver necessary to meet the site requirements. Only one interface can be used at a time, the system auto−selects the correct port that is being used. Supported MAUs are listed in Table 2−1.

Table 2−1. Supported AUI LAN Adapters and Devices

LAN Adaptor	Network Devices
HP 28641B ThinLAN Transceiver HP 30241A 10Base4 ThickLAN MAU	HP 28692A ThinLAN Hub Plus HP 28673A 10:10 LAN Bridge HP 28683A Fiber Optic Transceiver

Below is a summary of the LAN interface on the system board:

- Intel 82596CA LAN Controller functionality.
- IEEE 802.3/Ethernet 1.0.
- Boot ROM source support for diskless.

The LAN interface technical information is listed in Table 2−2.

Table 2−2. LAN Interface Technical Information

Function	Data
Type:	IEEE 802.3, Ethernet 1.0
Data rate:	10 Mbits/second
Connector types:	AUI LAN – 15–pin Twisted Pair – 8–pin

Downloaded from www.Manualslib.com manuals search engine

Video

A proprietary graphics controller chip is the basis for system board graphics. The Graphics ASIC outputs the standard HP workstation video signal. This signal consists of three analog channels of color Red, Green, and Blue. The analog output of each channel conforms to the RS343A specifications when driving a doubly terminated 75 Ohm line. Video cable length should not exceed 30 feet, due to signal degradation. The system provides HPs' Color Recovery.
The graphics subsystem supports the following:

- 1024 by 768 by 8 bit color at 60 Hz to 75 Hz.
- 1280 by 1024 by 8 bit color at 60 Hz to 72 Hz (with optional VRAM Card).
- 15 pin VGA style connection.
- NGLE compatible.
- Support of the following VESA timings:
  1280 by 1024 at 75 Hz.
  1024 by 768 at 75 Hz.
  800 by 600 at 75 Hz.
  640 by 480 at 75 Hz.

RS−232

The RS−232 port is full modem control with RTS hardware flow control. The port is implemented using a 9−pin male D−sub connector. Some devices which are supported on RS−232C include modems, plotters, printers, terminals, digitizers, and other input devices.

Table 2−3 lists technical information for the RS−232 interface.

Table 2−3. RS−232 Technical Information

Function	Data
Type:	RS–232C
Baud rate:	50 to 454k Up to 227k input w/handshaking
Word size:	5 to 8 bits
Parity	Odd, even, one, zero, none
Device Type:	1 per interface connector
Connector Type:	9–pin male D–sub connector

Downloaded from www.Manualslib.com manuals search engine

HP Parallel

The Parallel Interface is an 8 bit parallel, synchronous interface commonly used for printers. The hardware implementation has bidirectional capabilities compatible with PS/2 standards, also know as Centronics R interface. The hardware is also capable of interfacing to BiTronics type printers which transmit status information back to the workstation. The HP Scanjet parallel port interface is NOT supported on this workstation, even through software handshaking.
Technical information for the HP Parallel interface is listed in Table 2−4.

Table 2−4. HP Parallel Interface Information

Function	Data
Type:	Centronics, NACK and BUSY handshakes
Data rate:	>400 Kbytes/second with DMA 250 Kbytes/second sustained
Device Limit:	1
Connector Type:	25–pin female DB25 connector; IBM PS/2

PS/2

The keyboard and mouse interfaces are implemented by simple serial ports conforming to the de−facto industry standard PS/2 specification. Both the keyboard and mouse have a dedicated serial port of its own. The interface ports rely on the software to provide all of their intelligence; therefore, they do not interpret the characters passing through them in either direction. The interface to the host processor is through 6 one−byte registers for each port. The keyboard and mouse are connected to the system via standard PC−style, miniature DIN connectors. The keyboard is a PC compatible 101 and 102 key layout PS/2−style with a cable length of 7.5 feet. The 3−button mouse (A2839A) comes with a 9 foot cable, the mouse can be ordered separately. It is not recommended to extend the keyboard or mouse cables beyond 15 feet, due to signal degradation.

Audio

The heart of the audio system is the CODEC (coder−decoder). The CODEC combines CD and DAT quality stereo A/D converters for microphone and line input levels, as well as D/A converters for driving headset and the speaker. The input sampling rate and format are programmable, as are the input gain control (used for software control of recording levels) and output attenuation. There will be a single output jack provided with this product that provides headset output. Although this output is capable of driving 8 Ohms, it can also be used for higher impedance devices with little or no additional distortion, thus a line level input can be driven by the headset output. The following describes the input and output specifications:

- 16 bit resolution.
- Sampling rate up to 48 KHz.
- 1/8–in. connectors for the mono microphone, stereo line in, and stereo headset out.

Downloaded from www.Manualslib.com manuals search engine

SCSI−2

The primary function of the SCSI−2 interface circuit is to take data from the CPU bus, translate it to SCSI format, and transmit it down the SCSI bus to a mass storage device, and vice versa. A secondary function is to keep track of the status of the SCSI bus and inform the CPU of the status. SCSI circuits must have terminating resistors installed on them. When using the external SCSI configuration, you must use an active SCSI terminator at the last external device on the SCSI bus. All other devices, external or internal, must not be terminated. If your workstation contains the external cable but you have no external devices, the terminator need not be installed in the rear−panel SCSI connector. Use only HP K2291 terminators to ensure reliable system operation. Recommended SCSI−2 mass storage device bus addresses are listed in Table 2−5., and SCSI interface technical information is listed in Table 2−6.

Table 2−5. Recommended SCSI−2 Bus Addresses

Application	Unit or Mass Storage Device	Recommended Bus Address
High Use/Priority	CPU Root Hard Disk Drive Most Used Hard Disk Drive Least Used Hard Disk Drive	7 6 5 4
Other devices Medium Use/Priority Optional Use Low Use/Priority	DDS Tape Drives CD ROM Disk Drives (the 712 will not support a SCSI Floppy)	3 2 1 0

Table 2−6. SCSI−2 Interface Technical Information

Function	Data
Type:	SCSI–II (ANSI X3.131–1986), single–ended
Data rate:	Synchronous – 5 MBs/second
Device limits:	7 internal and/or external peripherals
Connector type:	SCSI–II, ALT–1 50–pin high–density thumb-screw
Maximum external cable length:	4 meters (13.1 feet)

Downloaded from www.Manualslib.com manuals search engine

Expansion Slot

The Expansion Slot is one of eight master capable devices on the GSC. The other seven are: CPU, SCSI, LAN, Parallel, Audio, Interrupts, and floppy. All devices serviced by the arbitration controller are given equal priority. The CPU is the only device that will be granted the bus without having requested it. The Expansion Slot is connected to the GSC with the same signals as does the I/O ASIC.

The slot currently supports the following cards:

HP A4011A IBM Token Ring Card
HP A4013A 2nd Serial Card
HP A4014A 2nd LAN/Serial Card
HP A4015A X.25/Serial Card
HP A2878A 2nd Monitor Card

HP Teleshare Slot

The Teleshare Slot is a non−industry standard I/O option slot. Currently this slot only supports the A4012A Teleshare card. System connections are made through the I/O ASIC. The ASIC has circuitry that implements two standard TTY interfaces. These TTY interfaces use the standard TTY driver. They connect directly (not through RS−232 hardware) to the Teleshare hardware. Serial control bits are implemented allowing for ”normal” RTS/CTS hardware handshake. The workstation digital audio signals to the built−in CODEC flow through the Teleshare hardware so that telephone audio may be mixed in. The existing audio connections (headphones and microphone) are used for the user interface. The I/O panel of the Teleshare card has twin RJ−14 jacks for connecting directly to the PSTN. RJ−14 jacks support two phone lines as opposed to RJ−11 which supports only one. The second RJ−14 jack can be used to connect a second line to the PSTN or connect to a user provided one or two line phoneset or fax to the Model 712 workstation platform. The international version of this card has two 15 pin, custom jacks for connections of external (localized) DAA modules.

Parts List

New Parts

New parts that have been assigned a part number are available direct from:

Support Materials Organization
Hewlett−Packard Company
8050 Foothills Boulevard
Roseville, California 95678 USA
Telephone: (916) 786−8000

Parts Center Europe
Hewlett−Packard GmbH
Wolf−Hirth Strasse 33
D−7030 Bobligen, Germany
Telephone: +41 7031 14−2253

Exchange Parts

Exchange parts are available for some items at a reduced cost. When an exchange part is ordered, your account will be charged for a new part.

Place failed exchange parts in anti−static bags and package them securely in a sturdy container. It's a good idea to save the containers and static−free bags you receive parts in and use them to ship parts in. Please return failed exchange parts to your exchange parts source as soon as possible. Customers have 15 days to return the failed part to receive credit for the difference between a new and exchange part.
Exchange only parts are available direct from:

Support Materials Organization
Hewlett−Packard Company
8050 Foothills Boulevard
Roseville, California 95678 USA
Telephone: (916) 786−8000

Support Material & Services Europe
Hewlett−Packard Ltd.
Filton Road − Stoke Gifford
Bristol BS12 6QZ United Kingdom
Telephone: +44 272 799910

Phone number for ordering new or exchange parts **1−800−227−8164.**

Expansion Slot Cards

Card Specifications

HP A4011A HP Token Ring/9000 Card

Description

The HP A4011A HP Token Ring/9000 Card (ITR) is a industry–standard IEEE 802.5.

Features

- Compatible with IEEE 802.5 (IBM) Protocols
- 4−16 Mbps data rate

Physical Specifications

Length:	193 mm (7.6 in)
Height:	64 mm (2.5 in)

Environmental Specifications

Temperature:	5 to 40 deg. C (41 to 104 deg. F)
Relative Humidity:	80% RH max at 40 deg. C (104 deg. F)
Altitude:	3,048 meters (10,000 feet)

Power Consumption (Max.)

4.4 Watts

Ordering Information

The HP A4011A HP Token Ring/9000 Card includes:
A2615−90614 Documentation
212100 Media Filter (included with card)
#AAH Device Driver on DDS tape.

Downloaded from www.Manualslib.com manuals search engine

HP A4012A Teleshare Card

Description

The HP A4012A Teleshare Card is composed of two independent Public Switched Telephone Network (PSTN) network connections. Either of these lines may be used in voice or data mode. When both lines are being used for voice, they may be ”conferenced” together.

Features

- Caller ID
- Call Waiting
- Call Forwarding
- Conference Calling
- Data Rate conversion and mixing
- Call Recording and Voice Mail
- Industry Standard ”AT” command set for modem communications
- V.32bis Modem (14,400 baud) with V.42bis and MNP5
- Class II Fax Modem
- Dual Tone Multi−Frequency (DTMF) based applications
- Supports Two Voice Lines or One Voice Line and One Data Line

**Note: Some of the features listed such as Caller ID and DTMF–based applications might not be supported by all international phone systems.

Detailed Information

The Teleshare Card plugs into a non−industry standard I/O option slot built into the Model 712 workstation. System connections are made through the I/O ASIC. The ASIC has circuitry that implements two standard TTY interfaces. These TTY interfaces use the standard TTY driver. They connect directly (not through RS−232 hardware) to the Teleshare hardware. Serial control bits are implemented allowing for ”normal” RTS/CTS hardware handshake. The workstation digital audio signals to the built−in CODEC flow through the Teleshare hardware so that telephone audio may be mixed in. The existing audio connections (headphones and microphone) are used for the user interface. The I/O panel of the Teleshare card has twin RJ−14 jacks for connecting directly to the PSTN. RJ−14 jacks support two phone lines as opposed to RJ−11 which supports only one. The second RJ−14 jack can be used to connect a second line to the PSTN or connect to a user provided one or two line phoneset or fax to the Model 712 workstation platform. The international version of this card has two 15 pin, custom jacks for connections of external (localized) DAA modules.

Physical Specifications

Length:	193 mm (7.6 in)
Height:	64 mm (2.5 in)

HP A4013A Serial Card

Description

The HP A4013A Serial Card adds a second RS−232−C interface to the Model 712 Workstation. The functionality is the same as the internal serial interface.

Features

- EIA RS−232−C (CCITT V.28/V.24 460.8 Kbps with CTS/RTS) compatibility
- Modem control
- Supports data transfer rates up to 454k baud
- Software selectable parity configuration
- Software selectable baud rate
- Interrupt capability through status or modem signal lines
- 9−pin male D−sub connector

Physical Specifications

Length:	193 mm (7.6 in)
Height:	64 mm (2.5 in)

Environmental Specifications

Temperature:	5 to 40 deg. C (41 to 104 deg. F)
Relative Humidity:	80% RH max at 40 deg. C (104 deg. F)
Altitude:	3,050 meters (10,000 feet)

Power Consumption (Max.)

5.0 Watts

Pin and Signal Assignment

Table 3−1. RS−232 Connector Pinouts

Pin No.	Signal	Pin No.	Signal	Pin No.	Signal
1	DCD	4	DTR	7	RTS
2	RXD	5	Ground	8	CTS
3	TXD	6	DSR	9	RI

Ordering Information

The HP A4013A Serial Card includes:
A2615−90610 Documentation

Downloaded from www.Manualslib.com manuals search engine

Recommended Cables:

Cables must be ordered from HP's Direct Marketing Division (DMK).

HP 24542G 9−pin F/25−pin M serial printer/plotter cable 3.0 meter (9.9 ft).
For use with the LaserJets, PaintJets, terminals, and Pen Plotters, except the HP 7550B Pen Plotter.
HP 24542H 9−pin F/25−pin F serial plotter cable, 3 meter (9.9 ft).
For use with the HP 7550B Pen Plotter.

Downloaded from www.Manualslib.com manuals search engine

HP A4014A LAN/Serial Card

Description

The HP A4014A LAN/Serial Card, provides a second AUI LAN connection and RS−232 serial connection to the Model 712 workstation. A single 26−pin connector is used on the card with all necessary signals for both RS232 and LAN−AUI. A "two−headed" external cable will allow simultaneous use of both functions.

Features

LAN–AUI

- IEEE 802.3/Ethernet 1.0.
- Intel 82596CA LAN Controller.
- 10 Mbits/second data rate.

Table 3−2. LAN−AUI Connector Pinouts

Pin No.	Signal	Pin No.	Signal	Pin No.	Signal
1	CI–S	7	CO–A	13	VP
2	CI–A	8	CO–S	14	VS
3	DO–A	9	CI–B	15	CO–B
4	DI–S	10	DO–B	16	Ground
5	DI–A	11	DO–S	17	Ground
6	VC	12	DI–B		

Serial

- EIA RS−232−C (CCITT V.28/V.24 460.8 Kbps with CTS/RTS) compatibility
- Modem control
- Supports data transfer rates up to 454k baud
- Software selectable parity configuration
- Software selectable baud rate
- Interrupt capability through status or modem signal lines
- 9–pin male D–sub connector

Table 3−3. RS−232 Connector Pinouts

Pin No.	Signal	Pin No.	Signal	Pin No.	Signal
1	DCD	4	DTR	7	RTS
2	RXD	5	Ground	8	CTS
3	TXD	6	DSR	9	RI

Physical Specifications

Length: 193 mm (7.6 in)
Height: 64 mm (2.5 in)

Downloaded from www.Manualslib.com manuals search engine

Environmental Specifications

Temperature:	5 to 40 deg. C (41 to 104 deg. F)
Relative Humidity:	80% RH max at 40 deg. C (104 deg. F)
Altitude:	3,050 meters (10,000 feet)

Power Consumption (Max.)

5.0 Watts

Ordering Information

The HP A4014A LAN/Serial Card includes:
A2615−90610 Documentation
A2263−62045 Two−headed cable

Recommended Cables:

Cables must be ordered from HP's Direct Marketing Division (DMK).

HP 24542G 9−pin F/25−pin M serial printer/plotter cable 3.0 meter (9.9 ft).
For use with the LaserJets, PaintJets, terminals, and Pen Plotters, except the HP 7550B Pen Plotter.
HP 24542H 9−pin F/25−pin F serial plotter cable, 3 meter (9.9 ft).
For use with the HP 7550B Pen Plotter.

Downloaded from www.Manualslib.com manuals search engine

HP A4015A X.25/Serial Card

Description

The HP A4015A X.25/Serial Card, provides a X.25 connection and a second RS−232 serial connection to the Model 712 workstation. A single 26−pin connector is used on the card with all necessary signals for both X.25 and RS−232. A ”two−headed” external cable will allow simultaneous use of both functions.

Features

X.25

- X.25 supports 1.2 to 19kbs.
- X.25 supports implementation of the LAP–B data–link protocol

Table 3−4. X.25 Connector Pinouts

Pin No.	Signal	Pin No.	Signal	Pin No.	Signal
1	Prot. Ground	10	Not Connected	18	Not Connected
2	TXD	11	Not Connected	19	Not Connected
3	RXD	12	Not Connected	20	DTR
4	RTS	13	Not Connected	21	Not Connected
5	CTS	14	Not Connected	22	Not Connected
6	DSR	15	TCLK	23	Not Connected
7	Signal Ground	16	Not Connected	24	TTE
8	DCD	17	RCLK	25	Not Connected
9	Not Connected				

Serial

- EIA RS–232–C (CCITT V.28/V.24 460.8 Kbps with CTS/RTS) compatibility
- Modem control
- Supports data transfer rates up to 454k baud
- Software selectable parity configuration
- Software selectable baud rate
- Interrupt capability through status or modem signal lines
- 9–pin male D–sub connector

Table 3−5. RS−232 Connector Pinouts

Pin No.	Signal	Pin No.	Signal	Pin No.	Signal
1	DCD	4	DTR	7	RTS
2	RXD	5	Ground	8	CTS
3	TXD	6	DSR	9	RI

Physical Specifications

HP A2878A 2nd Monitor Card

Description

The HP A2878A 2nd Monitor Card, provides a second monitor connection to the Model 712 workstation. The card supports the same displays that the built−in video interface supports. The analog output of each channel conforms to the RS343A specifications when driving a doubly terminated 75 Ohm line. The monitor connected to this card is not supported as the boot console.

Features

- 1024 by 768 by 8 bit color at 60 Hz. to 75 Hz.
- 1280 by 1024 by 8 bit color at 60 Hz. to 72 Hz.
- 15 pin VGA style connection
- NGLE compatible.
- Support of the following VESA timings:
  1280 by 1024 at 75 Hz.
  1024 by 768 at 75 Hz.
  800 by 600 at 75 Hz.
  640 by 480 at 75 Hz.
- X Window support.

Table 3−6. Supported Monitors for the Model 712

Product No.	Type	Resolution	Refresh Rate
HP A2882A	11.8–inch Flat panel	1024 by 768	75Hz.
HP D1196A	15–inch Color	1024 by 768	70Hz.
HP A2287A	17–inch Color	1024 by 768	75Hz.
HP A4032A	17–inch Color	1280 by 1024	Multi–Mode
HP A2094A	19–inch Color	1280 by 1024	72Hz.

Table 3−7. Video Connector Pinouts

Pin No.	Signal	Pin No.	Signal	Pin No.	Signal

4

Internal Mass Storage

SCSI Bus

Recommended SCSI mass storage device bus addresses are listed in Table 4−1. Mass storage device upgrades have these addresses factory set.

Table 4−1. Recommended SCSI Addresses

Application	Unit or Mass Storage Device	Recommended Bus Address
High Use/Priority	CPU Root Hard Disk Drive Most Used Hard Disk Drive Least Used Hard Disk Drive	7 6 5 4
Other devices Medium Use/Priority Optional Use Low Use/Priority	DDS Tape Drives CD ROM Disk Drives (the 712 will not support a SCSI Floppy)	3 2 1 0

SCSI circuits must have terminating resistors installed on them. Here is how the two configurations are terminated

- When using the external SCSI configuration, you must use an active SCSI terminator at the last external device on the SCSI bus.
- All other devices, external or internal, must not be terminated.
- If your workstation contains the external cable but you have no external devices, the terminator need not be installed in the rear–panel SCSI connector. Use only HP K2291 terminators to ensure reliable system operation.

Hewlett−Packard only supports SCSI devices that were designed for the Model 712 workstation. Even though disk drives that are supported on previous 700 workstations are similar, there are no plans to support these devices. Third−party SCSI drives are not supported, but if they meet SCSI−II specifications, they should work on the Model 712 workstation. These third−party devices may not perform as well as supported drives, due to special firmware (such as write caching) in the Model 712 SCSI drives that optimizes I/O performance. Refer to page 1−7 to find SCSI device driver guides that will assist in driver development.

Downloaded from www.Manualslib.com manuals search engine

Mass Storage Devices

The environmental specifications for the internal mass storage devices are for the standalone mechanisms. These specifications are not to be used for the Model 712 workstation. Please refer to pages 1−7 and 1−8 for the Model 712 workstation environmental specifications.

External Mass Storage

SCSI Bus

Recommended SCSI mass storage device bus addresses are listed in Table 5−1. Mass storage device upgrades have these addresses factory set.

Table 5−1. Recommended SCSI Addresses

Application	Unit or Mass Storage Device	Recommended Bus Address
High Use/Priority	CPU	7
	Root Hard Disk Drive	6
	Most Used Hard Disk Drive	5
	Least Used Hard Disk Drive	4
Other devices	DDS Tape Drives	3
Medium Use/Priority	CD ROM Disk Drives	2
Optional Use	(the 712 will not support a	1
Low Use/Priority	SCSI Floppy)	0

SCSI circuits must have terminating resistors installed on them. Here is how the two configurations are terminated:

When using the external SCSI configuration, you must use an active SCSI terminator at the last external device on the SCSI bus. All other devices, external or internal, must not be terminated.

If you workstation contains the external cable but you have no external devices, the terminator must be installed in the rear−panel SCSI connector. Use only HP K2291 terminators to ensure reliable system operation.

Hewlett−Packard only supports SCSI devices that were designed for the Model 712 workstation. Even though disk drives that are supported on previous 700 workstations are similar, there are no plans to support these devices. Third−party SCSI drives are not supported, but if they meet SCSI−II specifications, they should work on the Model 712 workstation. These third−party devices may not perform as well as supported drives, due to special firmware (such as write caching) in the Model 712 SCSI drives that optimizes I/O performance. Refer to page 1−6 to find SCSI device driver guides that will assist in driver development.

HP A2655A CD ROM Disk Drive

Capacity

Data Format Capacity:	650 MB min.
Audio Format Capacity:	74 minutes max.
Blocks per Disc:	Approx. 300,000 Blocks
Data Block Size:	Mode−1: 2048, Mode−2: 2336 Blocks
Data Buffer Capacity:	64 Kbytes
Applicable Discs:	Red Book, Yellow Book, CDROM−XA, CD−Graphics, Photo deg. CD Multisession, CD−Bridge, and CD−I Ready

Performance

Burst Data Transfer Rate	
Asyn:	1.5 MB/s
Syn:	4.2 MB/s
Sustained Block Transfer Rate	
1X:	75 Blocks/s
2X:	150 Blocks/s
Sustained Data Transfer Rate	
1X, Mode−1:	150 KB/s
2X, Mode−1:	300 KB/s
1X, Mode−2:	171 KB/s
2X, Mode−2:	342 KB/s
Random Average Access Time	
1X:	325 msec., typ.; 350 msec., max.
2X:	250 msec., typ.; 300 msec., max.
Full Stroke Average Access Time	
1X:	480 msec., typ.; 660 msec., max.
2X:	350 msec., typ.; 550 msec., max.
Average Disc Spin Up Time:	1.2 sec., typ; 1.5 sec., max.
Disc Rotational Speed	
1X:	Approx. 200 − 530 rpm
2X:	Approx. 400 − 1060 rpm

Environmental Requirements

Temperature		
	Operating:	5 to 50 deg. C (41 to 122 deg. F) 11 deg. C/hr (52 deg. F/hr gradient)
	Non−operating:	−10 deg. C to 65 deg. C (14 deg. F to 149 deg. F) 20 deg. C/hr (68 deg. F/hr gradient)
Altitude		
	Operating:	0 to 4600 meters (0 to 15,000 feet)
	Non−operating:	0 to 15,300 meters (0 to 50,000 feet)
Relative Humidity		
	Operating:	8% to 80% non deg. Condensing
	Non−operating:	5% to 95% non deg. Condensing
	Max wetbulb temperature	27 deg. C (81 deg. F)
Shock		
	Operating:	Less than 5 G peak, 11 ms, 1/2 sinewave
	Non−operating:	Less than 50 G peak, 11 ms, 1/2 sinewave
Vibration		
	Operating: Swept Sine:	0.5 G peak, 5 − 400 Hz, 20 min.
	Random:	0.25 G peak, 5 − 400 Hz, 10 min.
	Non−operating:	
	Swept Sine:	0.5 G, 5 − 400 Hz, 20 min.
	Random:	2.09 G, 5 − 400 Hz, 10 min.

Reliability and Life Data

Soft Read Error Rate:	Less than 1 in 10^9 bits read
Hard Read Error Rate:	Mode−1: Less than 1 in 10^{12} bits read Mode−2: Less than 1 in 10^9 bits read
Seek Error Rate:	Less than 1 in 10^8 seeks
MTBF:	50,000 POH @ 20% duty cycle
MTTR:	30 minutes
Caddy Load/Unload:	10,0000 times minimum
Interface Connector:	500 connections

Shipping Carton

Box Specifications

Type: 275 PSI, Double wall corrugated, regular slotted carton.
Color: KRAFT
Dimensions:
L − 21.375−in, W − 20.5−in, .D − 11.75−in.
Closure: Inner tuck, glued seam
Markings: Print with ink to match
GCMI No. 31 BLUE
Print per Photomasters:

5955−6667	HP company Logotype 6.5−in.
5955−6696	ISO Symbol
5955−6673	Environmental Statement
016691	Open Me First
A1630−84023−2	Install. Instruction Enclosure
A1658−84023−2	Disk Drive Warning
A1658−84021−2	CE Mark (no year indicated) (sized to match ISO symbols)
A1658−84030−11	AW Recycle foam (US only)

Note: Film positive artworks will be supplied by Hewlett−Packard.
Box part number printed next to certification stamp.
Refer to Figure 6−2 for graphics layout and 6−3 for carton layout.

Power Supply

Functional Information

The power supply is a semi−custom design. It is a 100KHz single−FET forward convertor with +5V and +12V as the two main outputs. Both of the main ouputs are sensed and fed back to provide an average regulation for the two outputs. The total continuous output power shall not exceed 70 Watts The power supply has a universal ac input to automaticlly sense line input voltage. An ”Easy Power Off” feature is included in the power supply in order to allow the user to turn the system off without first doing a shutdown −h, which is usually required on Unix machines. With the ”Easy Power Off” feature, when a user turns the On/Off switch off, a START_PWR_DOWN_L signal is coupled through an opto−coupler to the CPU chip, which causes the required shutdown routines to be initiated. When these routines have been completed, the I/O ASIC causes the POWER_UP_L signal to go high. This signal is coupled through another opto−coupler to the power supply, which then shuts down. The power supply will be customer removable with a screw driver after removing the top case of the computer.

Power Supply Specifications

Table 7−1. Power supply Output Specifications

Voltage	Current
+5.1 V dc	11.5 A
+12.0 V dc	1.0 A
+3.3 V dc	1.0 A
+5.0 V dc (SCSI)	0.5 A

Table 7−2. Power Supply Input Specifications

Input Power	**110 W Max Input**
Input Voltage (115V range)	90–132VAC
Input Current (115V range)	2.7A RMS max.
Input Voltage (230V range)	198–264 VAC
Input Current (230V range)	1.2A RMS max.
Line Frequency	47 – 66 Hz

Keyboard Layouts

Dimensions

The Model 712 workstation supports 13 different language keyboards. Each keyboard comes with a 7.5 foot mini–DIN style cable. The physical characteristics are as follows:

Length:	467 mm (18.4 in)
Width:	184 mm (7.25 in)
Height:	48 mm (1.9 in)
Weight:	1.09 kg (2.4 lb)

Japanese version:

Length:	455.7 mm (17.95 in)
Width:	164.51 mm (6.48 in)
Height:	38.07 mm (1.50 in)

Keyboard Layout

Tables 9−1 through 9−13 located on pages 9−2 through 9−14 show the 13 keyboard key layouts available for the model 712 Workstations.
