Agilent HFBR-5602/HFCT-5612 Gigabit Interface Converters (GBIC) for Fibre Channel

Data Sheet

Description

The HFBR-56xx/HFCT-56xx family of interface converters meet the Gigabit Interface Converter specification Rev. 5.4. The family provides a uniform form factor for a wide variety of standard connections to transmission media. The converters can be inserted or removed from a host chassis without removing power from the host system.

The converters are suitable for interconnections in the Fibre Channel mass storage and data transfer environment. The design of these converters is also practical for other high performance, point-to-point communication requiring gigabit interconnections. Since the converters are hot-pluggable, they allow system configuration changes or maintenance simply by plugging in a different type of converter.

The mechanical and electrical interfaces of these converters to the host system are identical for all implementations of the converter regardless of external media type. A 20-pin connector is used to connect the converter to the host system. Surge currents are eliminated by using pin sequencing at this connector and a slow-start circuit. Two ground tabs at this connector also make contact before any other pins, discharging possible component-damaging static electricity. In addition, the connector itself performs a two-stage contact sequence. Operational signals and power supply ground make contact in stage 1 while power makes contact in stage 2.

The HFBR-5602 has been developed with 850 nm short wavelength VCSEL technology while the HFCT-5612 is based on 1300 nm long wavelength Fabry Perot laser technology.

Features

- **Compliant with Gigabit Interface Converter specification Rev. 5.4 (1)**
- **HFBR-5602 is compliant with ANSI X3.297-1996 Fibre Channel Physical Interface FC-PH-2 Revision 7.4 proposed specifications**
- **HFCT-5612 is compliant with ANSI 100-SM-LC-L Revision 2 enhancement to X3.297-1996 FC-PH-2 Revision 7.4**
- **Performance:**
  HFBR-5602:
  300 m over 62.5/125 µm MMF
  500 m over 50/125 µm MMF
  HFCT-5612:
  500 m with 50/125 µm MMF
  500 m with 62.5/125 µm MMF
  10 km with 9/125 µm SMF
- **Horizontal or vertical installation**
- **AEL Laser Class 1 eye safe per IEC 60825-1**
- **AEL Laser Class I eye safe per US 21 CFR**
- **Hot-Pluggable**

Applications

- **Mass storage system I/O**
- **Computer system I/O**
- **High-speed peripheral interface**
- **High-speed switching systems**
- **Host adapter I/O**
- **RAID cabinets**

Related Products

- **850 nm 1 x 9 VCSEL transceiver for Fibre Channel applications (HFBR-53D3)**
- **1300 nm, 1 x 9 laser transceiver for Fibre Channel applications (HFCT-53D3)**
- **Physical layer ICs available for optical or copper interface (HDMP-1536A/46A)**
- **Versions of both 1 x 9 and GBIC transceiver module for Gigabit Ethernet**

Agilent Technologies
Innovating the HP Way

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

The HFBR-5602 complies with Annex E of the GBIC specification Revision 5.4. In the Fibre Channel environment, the HFBR-5602 achieves 300 m transmission distance with 62.5 µm and 50 µm multimode fibre.

The HFCT-5612 complies with Annex C of the GBIC specification Revision 5.4 and reaches 10 km with 9/125 µm single mode fiber. Both the HFBR-5602 and the HFCT-5612 are Class 1 Eye Safe laser devices.

Serial Identification
The HFBR-56xx and HFCT-5612 family complies with Annex D (Module Definition 4) of the GBIC specification Revision 5.4, which defines the Serial Identification Protocol.

Definition 4 specifies a serial definition protocol. For this definition, upon power up, MOD_DEF(1:2) (Pins 5 and 6 on the 20-pin connector) appear as NC. Pin 4 is TTL ground. When the host system detects this condition, it activates the public domain serial protocol. The protocol uses the 2-wire serial CMOS E^2PROM protocol of the ATMEL AT24C01A or similar.

The data transfer protocol and the details of the mandatory and vendor specific data structures are defined in Annex D of the GBIC specification Revision 5.4.

Regulatory Compliance
See the Regulatory Compliance Table for the targeted typical and measured performance for these transceivers.

The overall equipment design will determine the level it is able to be certified to. These transceiver performance targets are offered as a figure of merit to assist the designer in considering their use in equipment designs.

Electrostatic Discharge (ESD)
There are two design cases in which immunity to ESD damage is important.

The first case is during handling of the transceiver prior to inserting it into the host system. It is important to use normal ESD handling precautions for ESD sensitive devices. These precautions include using grounded wrist straps, work benches, and floor mats in ESD controlled areas.

The second case to consider is static discharges during insertion of the GBIC into the host system. There are two guide tabs integrated into the 20-pin connector on the GBIC. These guide tabs are connected to circuit ground. When the GBIC is inserted into the host system, these tabs shall engage before any of the connector pins. The mating connector in the host system should have its tabs connected to circuit ground. This discharges any stray static charges and establishes a reference for the power supplies that are sequenced later.

Electromagnetic Interference (EMI)
Most equipment designs utilizing these high-speed transceivers from Agilent will be required to meet the requirements of FCC in the United States, CENELEC EN55022 (CISPR 22) in Europe and VCCI in Japan.

Immunity
Equipment utilizing these transceivers will be subject to radio-frequency electromagnetic fields in some environments. These transceivers have good immunity to such fields due to their shielded design.

Eye Safety
Laser-based GBIC transceivers provide Class 1 (IEC 60825-1) and Class I (US 21 CFR[J]) laser eye safety by design. Agilent has tested the current transceiver design for compliance with the requirements listed below under normal operating conditions and for compliance under single fault conditions.

Outline Drawing
An outline drawing is shown in Figure 1. More detailed drawings are shown in Gigabit Interface Converter specification Rev. 5.4.

CAUTION:
There are no user serviceable parts nor any maintenance required for the HFBR-56xx and HFCT-56xx product family. All adjustments are made at the factory before shipment to our customers. Tampering with or modifying the performance of any Agilent GBIC unit will result in voided product warranty. It may also result in improper operation of the circuitry, and possible overstress of the semiconductor components. Device degradation or product failure may result.

Connection of either the HFBR-5602 or the HFCT-5612 to a non-approved optical source, operating above the recommended absolute maximum conditions, or operating in a manner inconsistent with unit design and function, may result in hazardous radiation exposure and may be considered an act of modifying or manufacturing a laser product. The person(s) performing such an act is required by law to recertify the laser product under the provisions of US 21 CFR (Subchapter J).

Regulatory Compliance

Feature	Test Method	Targeted Performance
Electrostatic Discharge (ESD) to the Electrical Pins	MIL-STD-883C Method 3015.4	Class 1 (>2000 V)
Electrostatic Discharge (ESD) to the Duplex SC Receptacle	Variation of IEC 801-2	Typically withstand at least 15 kV without damage when port is contacted by a Human Body Model probe.
Electromagnetic Interference (EMI)	FCC Class B CENELEC EN55022 Class B (CISPR 22A) VCCI Class 1	Margins are dependent on customer board and chassis design.
Immunity	Variation of IEC 801-3	Typically show no measurable effect from a 10 V/m field swept from 27 to 1000 MHz applied to the transceiver without a chassis enclosure
Laser Eye Safety	US 21 CFR, Subchapter J per paragraphs 1002.10 and 1002.12 EN 60825-1: 1994+A11 EN 60825-2: 1994 EN 60950: 1992+A1+A2+A3	AEL Class I, FDA/CDRH HFBR-5602 Accession No. 9720151-04 HFCT-5612 Accession No. 9521220-16 AEL Class 1, TUV Rheinland of North America HFBR-5602 Certificate No. R9771018-7 HFCT-5612 Certificate No. 933/51083 Protection Class III

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Short Wavelength GBIC: HFBR-5602 Transmitter Section

The transmitter section consists of an 850 nm VCSEL in an optical subassembly (OSA), which mates to the fiber cable. The VCSEL OSA is driven by a custom, silicon bipolar IC which converts differential logic signals into an analog Laser Diode drive current.

Receiver Section

The receiver includes a silicon PIN photodiode mounted together with a custom, silicon bipolar transimpedance preamplifier IC, in an OSA. This OSA interfaces to a custom silicon bipolar circuit that provides post-amplification and quantization. The post-amplifier includes a Signal Detect circuit that provides TTL compatible logic-low output in response to the detection of a usable input optical signal.

Eye Safety Design

The laser driver is designed to be Class 1 eye safe (CDRH21 CFR(J), IEC 60825-1) under a single fault condition. To be eye safe, only one of two results can occur in the event of a single fault, the transmitter must either maintain normal eye safe operation or the transmitter should be disabled. There are three key elements to the safety circuitry: a monitor diode, a window detector circuit, and direct control of the laser bias. The window detection circuit monitors the average optical power using the monitor diode. If a fault occurs such that the dc regulation circuit cannot maintain the preset bias conditions within ±20%, the transmitter will automatically be disabled. Once this has occurred, an electrical power reset will allow an attempted turn-on of the transmitter. TX_FAULT can also be cleared by cycling TX_DISABLE high for a time interval ≥10 µs.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause catastrophic damage to the device. Limits apply to each parameter in isolation, all other parameters having values within the recommended operating conditions. It should not be assumed that limiting values of more than one parameter can be applied to the product at the same time. Exposure to the absolute maximum ratings for extended periods can adversely affect device reliability.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Storage Temperature	T_S	-40		+85	°C	
Supply Voltage	$V_{DD}T$ $V_{DD}R$	-0.5		6.0	V	
Data Input Voltage	TX_DAT	-0.5		$V_{DD}T$	V	1
Transmitter Differential Input Voltage	±TX_DAT			2000	mV p-p	
Relative Humidity	RH	5		95	%	

Recommended Operating Conditions

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Ambient Operating Temperature	T_A	0		+60	°C	
Case Temperature	T_{CASE}			+75	°C	2
Supply Voltage	$V_{DD}T$ $V_{DD}R$	4.75	5.0	5.25	V	
Supply Current	$I_{TX} + I_{RX}$		200	300	mA	3

Transceiver Electrical Characteristics

(T_A = 0°C to +60°C, V_{CC} = 4.75 V to 5.25 V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Surge Current	I_{SURGE}			+30	mA	4
Power Dissipation	P_{DISS}		1.00	1.58	W	5

Notes:

1. Up to applied $V_{DD}T$.
2. See Figure 1 for measurement point.
3. Maximum current is specified at V_{CC} = maximum @ maximum operating temperature and end of life.
4. Hot plug above actual steady state current.
5. Total $T_X + R_X$.

Long Wavelength GBIC: HFCT-5612

Transmitter Section

The transmitter section consists of a 1300 nm MQW Fabry Perot Laser in an optical subassembly (OSA), which mates to the fiber optic cable. The Laser OSA is driven by a custom, silicon bipolar IC which converts differential PECL logic signals (ECL referenced to a +5 V supply) into an analog drive current to the laser.

The laser driver IC incorporates temperature compensation and feedback from the OSA to maintain constant output power and extinction ratio over the operating temperature range.

Receiver Section

The receiver includes a PIN photodiode mounted together with a custom, silicon bipolar transimpedance preamplifier IC, in an OSA. The OSA interfaces to a custom silicon bipolar circuit that provides post-amplification and quantization. The post-amplifier includes a Signal Detect circuit that provides TTL compatible logic-low output in response to the detection of a usable input optical signal.

Eye Safety Design

The laser driver is designed to be Class 1 eye safe (CDRH21 CFR(J), IEC 60825-1) under a single fault condition.

There are three key elements to the safety circuitry: a monitor diode, a window detector circuit, and direct control of the laser bias. The window detection circuit monitors the average optical power using the photo diode in the laser OSA. If a fault occurs such that the dc bias circuit cannot maintain the preset conditions within ±20%, TX_FAULT (Pin 10) will be asserted (high).

Note: Under any single fault, the laser optical output power will remain within Class 1 eye safe limits.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause catastrophic damage to the device. Limits apply to each parameter in isolation, all other parameters having values within the recommended operating conditions. It should not be assumed that limiting values of more than one parameter can be applied to the product at the same time. Exposure to the absolute maximum ratings for extended periods can adversely affect device reliability.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Storage Temperature	T_S	-40		+85	°C	
Supply Voltage	$V_{DD}T$ $V_{DD}R$	-0.5		6.0	V	
Data Input Voltage	TX_DAT	-0.5		$V_{DD}T$	V	
Transmitter Differential Input Voltage	±TX_DAT			2000	mV p-p	
Relative Humidity	RH	5		95	%	

Recommended Operating Conditions

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Ambient Operating Temperature	T_A	0		+60	°C	
Case Temperature	T_{CASE}			+75	°C	1
Supply Voltage	$V_{DD}T$ $V_{DD}R$	4.75	5.0	5.25	V	
Supply Current	$I_{TX} + I_{RX}$		200	300	mA	2

Transceiver Electrical Characteristics

(T_A = 0°C to +70°C, V_{CC} = 4.75 V to 5.25 V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Surge Current	I_{SURGE}			+30	mA	3
Power Dissipation	P_{DISS}		1.00	1.58	W	4

Notes:

1. See Figure 1 for measurement point.
2. Maximum current is specified at V_{CC} = maximum @ maximum operating temperature and end of life.
3. Hot plug above actual steady state current.
4. Total $T_X + R_X$.

Transmitter Electrical Characteristics

(T_A = 0°C to +60°C, V_{CC} = 4.75 V to 5.25 V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Transmitter Differential Input Voltage	±TX_DAT	650		2000	mV p-p	
Transmit Fault Load	TX_FAULT_{Load}	4.7		10	kΩ	1
Transmit Fault Output - Low	TX_FAULT_L	0.0		0.5	V	
Transmit Fault Output - High	TX_FAULT_H	V_{CC} -0.5		V_{CC} +0.3	V	2
TX_DISABLE Assert Time	t_off		3	10	µsec	3
TX_DISABLE Negate Time	t_on		0.5	1	msec	4
Time to initialize, includes reset of TX_FAULT	t_init		30	300	msec	5
TX_FAULT from fault to assertion	t_fault		20	100	µsec	6
TX_DISABLE time to start reset	t_reset	10			µsec	7

Receiver Electrical Characteristics

(T_A = 0°C to +60°C, V_{CC} = 4.75 V to 5.25 V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Receiver Differential Output Voltage	±RX_DAT	370		2000	mV p-p	
Receiver Output Rise Time	t_{rRX_DAT}			0.35	ns	8
Receiver Output Fall Time	t_{fRX_DAT}			0.35	ns	8
Receiver Loss of Light Load	RX_LOS_{Load}	4.7		10	kΩ	1
Receiver Loss of Signal Output Voltage - Low	RX_LOS_L	0.0		0.5	V	
Receiver Loss of Signal Output Voltage - High	RX_LOS_H	V_{CC} -0.5		V_{CC} +0.3	V	2
Receiver Loss of Signal Assert Time (off to on)	t_{A,RX_LOS}			100	µs	
Receiver Loss of Signal Deassert Time (on to off)	t_{D,RX_LOS}			100	µs	

Notes:

1. Open collector TTL compatible.
2. 4 k7 to 10 k pull-up on host to V_{CC}.
3. Rising edge of TX_DISABLE to fall of output signal below 10% of nominal.
4. Falling edge of TX_DISABLE to rise of output signal above 90% of nominal.
5. From power on or hot plug after $V_{DD}T$ >4.75 V or From negation of TX_DISABLE during reset of TX_FAULT.
6. From occurrence of fault (output safety violation or $V_{DD}T$ <4.5 V).
7. TX_DISABLE HIGH before TX_DISABLE set LOW.
8. 20% to 80% response time.

Transmitter Optical Characteristics

(T_A = 0°C to +60°C, V_{CC} = 4.75 V to 5.25 V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Output Optical Power						
9/125 µm SMF	P_O	-9.5	-7	-3	dBm	
62.5/125 µm MMF		-11.5		-3	dBm	
50/125 µm MMF		-11.5		-3	dBm	
Optical Extinction Ratio		9			dB	
Center Wavelength	λ_C	1285	1310	1343	nm	
Spectral Width - rms				2.8	nm rms	
Optical Rise/Fall Time	t_r / t_f			0.320	ns	1, 2 and Figure 2
RIN_{12}				-116	dB/Hz	
Deterministic Jitter	DJ			188	ps_{p-p}	
Max. Pout TX_DISABLE Asserted	P_{OFF}			-35	dBm	

Receiver Optical Characteristics

(T_A = 0°C to +60°C, V_{CC} = 4.75 V to 5.25 V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Notes
Input Optical Power	P_{IN}	-20	-25	-3	dBm avg.	
Operating Center Wavelength	λ_C	1270		1355	nm	
Return Loss		12			dB	
Receiver Loss of Signal - TTL Low	$P_{RX_LOS\ A}$		-28	-20	dBm avg.	
Receiver Loss of Signal - TTL High	$P_{RX_LOS\ D}$	-31			dBm avg.	

Notes:

1. 20% to 80% response time.
2. Laser transmitter pulse response characteristics are specified by an eye diagram (Figure 2).

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.

Learn more!

Visit us at **artisantg.com** for more info on price quotes, drivers, technical specifications, manuals, and documentation.

Artisan Scientific Corporation dba Artisan Technology Group is not an affiliate, representative, or authorized distributor for any manufacturer listed herein.

We're here to make your life easier. How can we help you today?
