3900 Type A-1 Crate Controller

The Model 3900 is a double-width crate controller providing the interface between a standard CAMAC Parallel Branch Highway and the CAMAC Dataway. This controller compiles with IEEE Standard 596, Type A-1. *A 3952 Enhanced Serial Crate Controller (with associated Enhanced Serial Highway Driver) is recommended for new designs.*

3920 General Purpose Crate Controller

The Model 3920 is a double-width general-purpose crate controller that communicates via a 50-wire flat ribbon cable. It can be interfaced to the host computer by a dedicated interface card (such as the 2920 Interface for Q-bus). *The 3922 Parallel Bus Crate Controller is recommended for new designs.*

3938 Bit-serial, Fiber Optic U-Port Adapter

The Model 3938 is a single-width U-Port adapter providing an isolated bit-serial highway path when used with a Type L-2 serial crate controller (SCC) such as the Model 3952 or with a serial driver (SD) such as the Model 3992 or 3994. *Higher-performance byte-serial fiber optic highways and the 3939 U-Port Adapter are recommended for new design*.

3953 Auxiliary Controller Adapter

The Model 3953 is a double-width CAMAC module which occupies the main crate controller slots and allows auxiliary controllers to be used in stand-alone systems without a main crate controller. *Data sheet available upon request.*
