Modular Computers

VVGA

Super VGA Board For Industrial Applications

Recent trends in the industrial sector have led to the development of graphical user interfaces specifically designed to cater for harsh environments.

PEP's VVGA (VMEbus Video Graphics Adapter) equipped with the Western Digital WD90C24A graphics controller, supports not only the PC-world standard VGA graphics interface but also a colourful palette of video displays.

PEP offers not only compatible VMEbus hardware, but also a variety of software packages designed to meet individual customer configuration requirements. This versatility is further enhanced by a simple cable interface allowing for example, in the case of flat panel displays, software controlled contrast regulation.

The software currently available is able to initialize and control standard (VGA and SVGA) CRTs and flat panel displays like:

- Monochrome EL displays such as Finlux EL640.400 providing 16 shades of gray
- Monochrome, single panel LCD displays (320x240) such as Sharp LM32010 providing 64 shades of gray
- Monochrome, single panel LCD displays (640x480) such as Sharp LM64P80 providing 64 shades of gray
- Color, single panel TFT LCD displays (640x480) such as Sharp LQ10DH11 providing 256 colors

In addition to the graphical interface, other interfaces are provided for a mouse or track ball, keyboard and touch screen.

XWindow server software or the MGR integrate the physical interfaces to produce graphical user interfaces for both client/server and embedded hardware architectures.

For more details on this product, a data sheet is available under the Reference Number 12665 DS to info@pep-kaufbeuren.de.
