M28

Design Features

- Compact and Sturdy construction
- Profile ground worm threads
- High Torque capacity
- Versatility in mounting and usage
- All metric design

Single Reduction Units (Worm)

The M28 design is based on a single light weight die cast aluminium case and can be supplied with a variety of bolt on feet to enable mounting in the underdriven, overdriven and vertical positions. The unit can be supplied in either motorised or reducer versions and are available with either hollow output bore and single or double output shafts.

M28 gives a choice of 11 standard ratios from 5:1 to 60:1 which provide high efficiency and load carrying capacities combined with long life and reliability.

All units are lubricated for life to reduce maintenance to a minimum.

Double Reduction Units (Worm/Worm)

These units consist of two single reduction units mounted together. The range extends the ratios available up to 3600:1 making them ideal for fitting to slow moving machinery.

As with the single reduction units they are available with a variety of feet for underdriven, overdriven and vertical mounting positions and are available with single output shafts. All units are lubricated for life

Motorised Units

The M28 range can be supplied with motor adaptors to suit IEC standard motors in various frame sizes. Units are also available to accept standard dimension NEMA motors.
