Preprocessor for ARM-ETM HSSTP (LA-7988)

The HSSTP (High Speed Serial Trace Port) is different to the common parallel trace ports as ETM use. The Preprocessor for ARM-ETM HSSTP opens the way to receive trace data on a serial way at higher data rates.

The target hardware has to be equipped with a 40 pin ERM8 connector in order to connect this preprocessor for ARM-ETM HSSTP. For dimensions and target connector pinout of the preprocessor see the chapter **Technical Data**.

Outdated version

The outdated version is no longer available, but still supported.

All trace signals are connected after plugging the preprocessor into the target´s trace connector.

In case of no separate JTAG connector on the target, the debug cable can be conneted with the preprocessors JTAG connector on the back side.

PowerTrace Serial 4 GigaByte for ARM-ETM HSSTP and PCIe

Please refer to **“PowerTrace Serial User’s Guide”** (serialtrace_user.pdf).

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment
