Molded IEEE-488 Cable, 1.0m

These unique cable assemblies allow one connector to exit in the reverse direction than standard cables. This feature is sometimes desirable and necessary to avoid nearby obstructions or when extending existing cable assembly lengths. Wiring is the same as standard GPIB cables, only connector orientation is reversed. Featuring an outer braid plus foil shield, these cables provide for enhanced protection against EMI (electromagnetic interference). A unique stamped steel internal enclosure provides 100% shielding and a robust strain relief. Molded back-shells contribute to a long life expectancy and resist breakage at the point where the cable enters the back-shell. This combination of features ensures a highly reliable cable that will pass stringent emissions testing while providing years of trouble free service. Custom modifications are available with modest minimum requirements.

Features for this IEEE-488 GPIB product

- Reverse entry allows cables to exit in the opposite direction
- Cable meets IEEE-488 standards for connecting peripherals where EMI is an issue
- 30 micro-inch gold contact plating provides reliable connections with repeated mating cycles
- Custom stamped steel internal enclosure provides 100% shielding and a robust strain relief
- Color: light gray

Details for this IEEE-488 GPIB product

L-com Item #	CIMB24-1M
Manufacturer	L-com
Connector Orientation	Normal / Reverse

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
