SCS1 Soft Contact Acrylate Stripper

Features

- Effortlessly strips 250µm dual acrylate from 125µm glass cladding
- Strips any dual acrylate (including 80/175, 140/250, 230/400 fiber sizes)
- High strip count
- Easy and safe to use with no fiber damage
- Blades do not clog up
- Replacement blades available
- Ideal for window and end stripping

Enhanced Compatibility

This finely machined aluminum hand held fiber optic stripping tool meets very high pull test standards and will effortlessly and cleanly remove any length of dual acrylate coating from the glass cladding. This tool features high strip count and replaceable soft contact blades.

Fiber Types

The fiber must be dual acrylate (by far the most common buffer type).

The soft blades work by forming a hole in the blades around the glass. There are no grooves in new blades. The grooves are formed during stripping. The same blades can therefore not only strip 250µm acrylate from 125µm glass cladding (the most common) but any dual acrylate (including 80/175, 140/250, 125/250, 230/400 fiber sizes). However, it is recommended that one pair of blades be used for only one fiber size.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
