Low-Profile Tilt Stage

- Fine-threaded thumbscrew drives
- Both drives conveniently located on one side
- Low-profile design

This very compact stage provides tilt about two orthogonal axes parallel to a 25 × 25-mm mounting platform. Adjustment is provided by two stainless steel, 0.35-mm-pitch (73-TPI) thumbscrews conveniently located on one side of the stage. The tilt-adjustment range is ±2.5 degrees in each axis. The stage, which is 10-mm high, is made of black-anodized aluminum. This stage can be used as a low-profile tilt stage or as a narrow-profile mirror mount. When used as a tilt stage, its base is attached to other stages or bases with one M2 screw and one M4 screw. When the stage is used as a narrow-profile mirror mount, the three M2-threaded holes along one edge are used for mounting.

07 TMT 501 low-profile tilt stage

Prism assembly with low-profile tilt stage

Tilt stage may be mounted vertically or horizontally.
