FORENSIC LABORATORY PRODUCTS

Downflow Workstation

Open Design, Compact Size

The Downflow Workstation is a stand alone, ductless unit that protects workers from powders or fumes.

Applications:

- Fingerprinting with powders
- Histology
- Powder weighing
- Microscopy

The unit's open design allows for close inspection of samples while maintaining a high level of operator protection. Particles or fumes are drawn downward through the stainless steel work surface and contaminants are removed by a series of filters. After the fumes or powders are filtered, the clean air is returned to the room.

Design features include a durable aluminum frame with a powder-coated exterior for corrosion resistance. The work surface is stainless steel and is removable for easy cleaning. A pressure switch for indicating when filters need replacement is standard in addition to an internal fluorescent light.

HEPA filters are available if your application includes powders or particles. If you are working with chemicals, we offer a variety of carbon filter options. Please consult with Misonix for assistance in choosing the correct filter for your application.

Airflow Diagram

Specifications:

Dimensions	28" wide x 24" deep x 32" high
Electrical	110V/60Hz
Lighting	One 15 watt fluorescent bulb
Fan	Centrifugal and sparkless
Construction	Frame: Powder coated steel Work Surface: 316 Stainless steel

Ordering Information:

Part #	FE-WS6 Downflow Workstation
	FE-1013 Package of (10) Pre-filters
	Please call for main filter options
