

ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Micrometer Heads

CATALOG No. E1006

A common measuring, feeding, and positioning device to be mounted on measuring instruments and precise machines

Mitutoyo

MICROMETER HEAD

Mitutoyo was established in 1934 as a pioneer in the manufacture of micrometer in Japan. With over 70 years of dedication in the precision measurement of reliable and high-quality products Mitutoyo is now the name recognized worldwide.
The micrometer head production started from the initial commencement of the company and the factories specialized in its production were built in 1977 and 1979. The micrometer head become a common measuring, feeding and positioning device to be mounted on a measuring instrument and precise machine.
According to the recent technology development, the micrometer head becomes widely utilized in the precise feeding device, cross-travel stage of laser instrument and manipulator, not to mention measurement of jigs. In parallel with the application expansion, the customer's need is varied. To meet these customer's demands Mitutoyo provides the standard micrometer heads with different measuring range, stem type and body size. Furthermore, high-performance types of Digimatic Micrometer Head, 0.25mm spindle pitch model (standard 0.5mm), etc. are available for the new applications.
Mitutoyo also provides customization service for the customer special application. The micrometer head with customized spindle tip and precision lead screw produced with customer specifications can be offered even from 1 pc. onwards

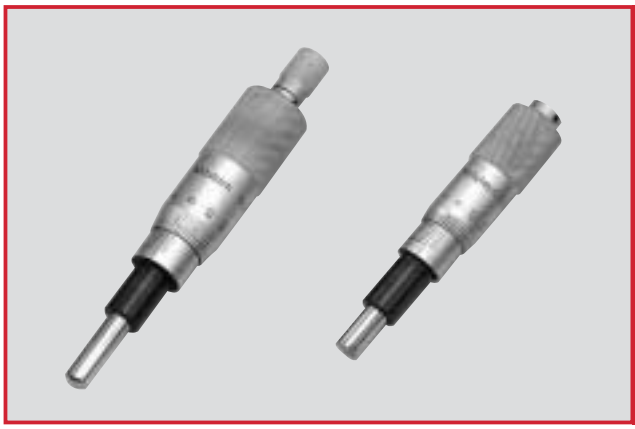

Shiwa Plant

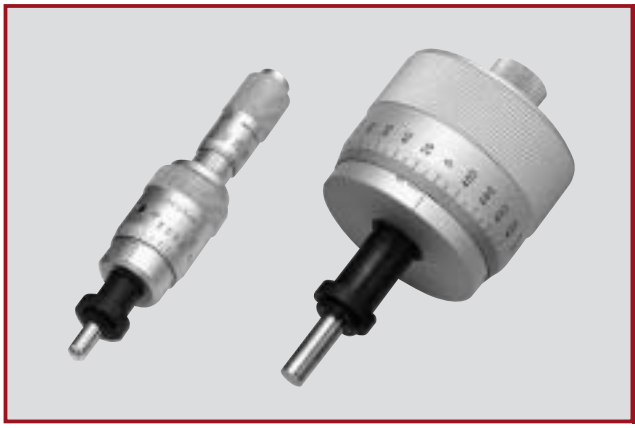

Onomi Plant

Mitutoyo micrometer head is manufactured in the two main factories in Japan, Onomi Plant established in 1977 and Shiwa Plant established in 1979. With state-of-the-art production in technology and equipment, Mitutoyo micrometer head is renowned in the world for its finest quality.

05 page Standard type

These are micrometer heads which have a specification mentioned on the JIS standard. Various micrometer heads with different measuring range, stem type and body size are available for wider application. You can choose the best model for your machine design.

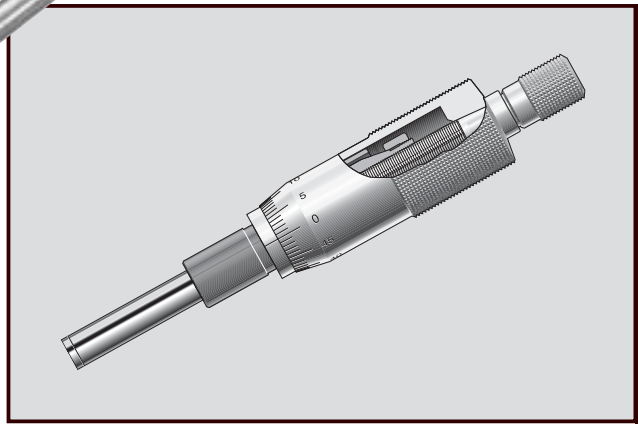

14 page High-performance type

Various high-performance types of non-rotating spindle, digital display, 1mm and 0.25mm spindle pitches, etc. are available for your sophisticated application.

30 page "Made-to-order" item

Special micrometer heads with customized spindle tip and thimble graduation and customer logotype marking are available from order of 1 pc. The precision lead screws specially produced by your specifications are also available.

38 page Selection guide, etc.

- Selection guide
- Mitutoyo traceability system

Series 148

Ultra-small size

Range: 5mm/.2"
Graduation: 0.02mm/.001"
Accuracy: ±0.005mm
Spindle face: SKS3(material)
More than HRC60
Lapped surface
Scale surface: Hard-Chrome plating

Unit: mm

ø6mm thimble and 4g weight, ultra-small size micrometer head for limited space applications.

Order No. (metric)

		Spherical face	Rev. reading

Series 110

Fine feed

Spindle face: Carbide tip/SK$3*
More than HRC90/60*
Lapped surface
Scale surface: Hard-Chrome plating
Fixture thickness: 6mm/11.5mm*
*110-502, 110-504

Ultra-fine feed micrometer head.

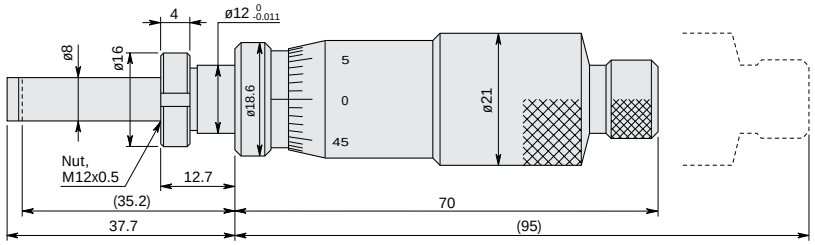

The differential movement of spindle threads and nuts allows ultra-fine feeding (1/20 resolution of standard type.)

Unit: mm

Stem with clamp nut

110-101, 110-111
With vernier: 110-102, 110-112

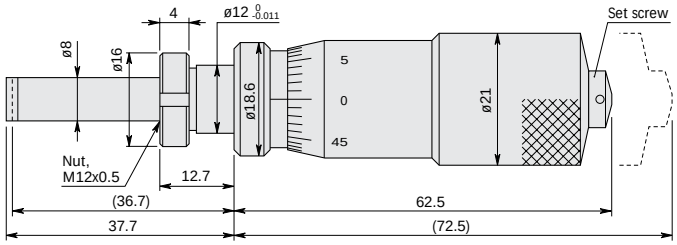

Mass (g): 150

- The differential movement mechanism with double-spindle achieves ultra-fine feeding of 0.05mm/rotation.
- Non-rotating spindle.

Stem with clamp nut

110-105, 110-115
With vernier: 110-106, 110-116

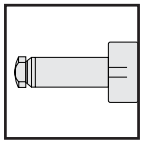

Mass (g): 150

Spherical face:

110-107, 110-117

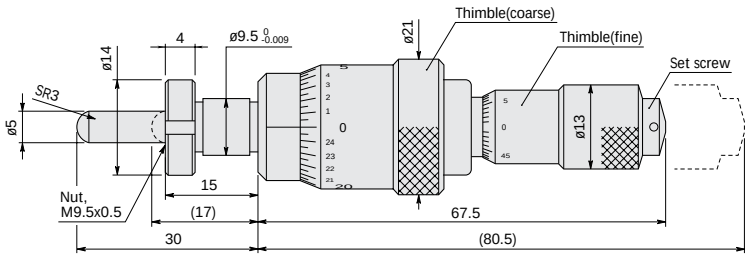

Spherical face, With vernier:

110-108, 110-118

Stem with clamp nut

110-502, 110-504

Mass (g): 95

- The dual-thimble mechanism allows independent operations of fine and coarse feeding.
- Fine feeding (0.025mm/rotation), coarse feeding (0.5mm/rotation).

( ): When retracting the spindle until its stroke end.

Series 152

Large thimble

Spindle face: Carbide tip
More than HRC90
Lapped surface
Scale surface: Hard-Chrome plating
Fixture thickness: 22.5mm

Micrometer head with large thimble.

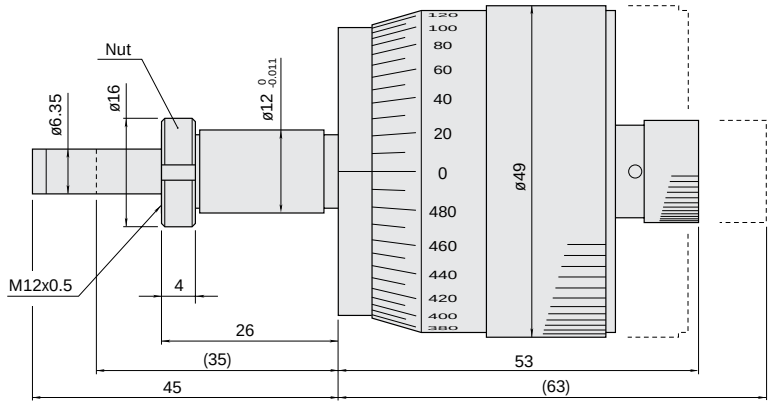

The large thimble employment allows high resolution (1/5 of standard type) and very light of rotation. The spindle pitch is 0.5mm.

Unit: mm

Stem with clamp nut

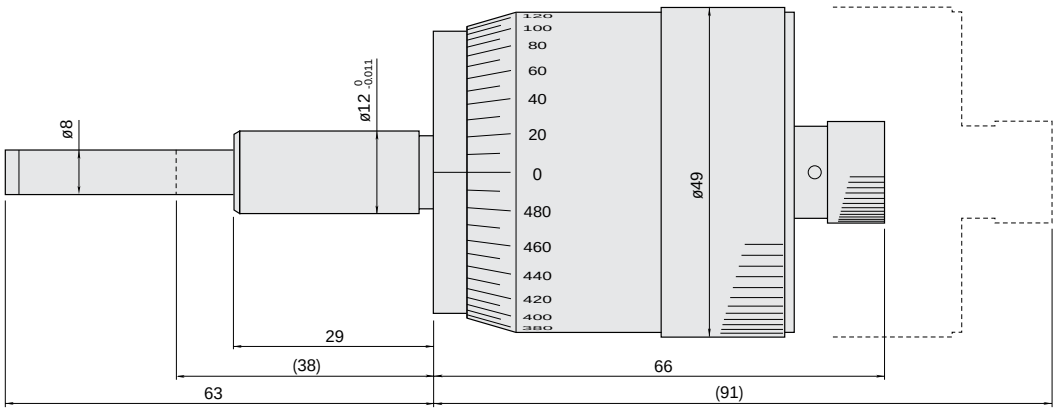

152-283

Mass (g): 190

Plain stem

152-332
Bidirectional graduation: 152-348, 152-372

Mass (g): 310

( ): When retracting the spindle until its stroke end.

Series 152

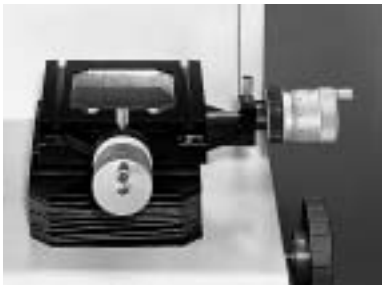

Large thimble 1mm (.025") pitch For XY stage

Spindle face: Carbide tip/SKS3*
More than HRC90/60*
Lapped surface
Scale surface: Hard-Chrome plating
Fixture thickness: 22.5mm

*152-389, 152-390, 152-391, 152-392

Unit: mm

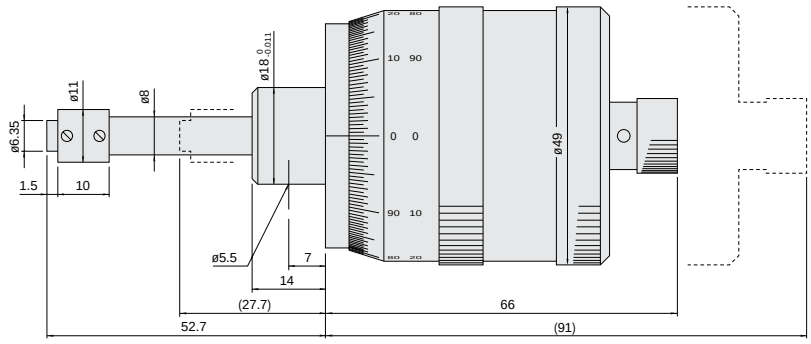

Micrometer head specially designed for cross-travel stage.

1mm spindle pitch allows quick feeding and positioning. Large thimble provides clear reading of thimble graduation and increases measurement efficiency. The thimble figures of Y-axis model are marked in the same direction of spindle feeding for easy reading.

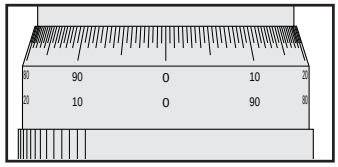

Plain stem

152-390, 152-392

Mass (g): 270

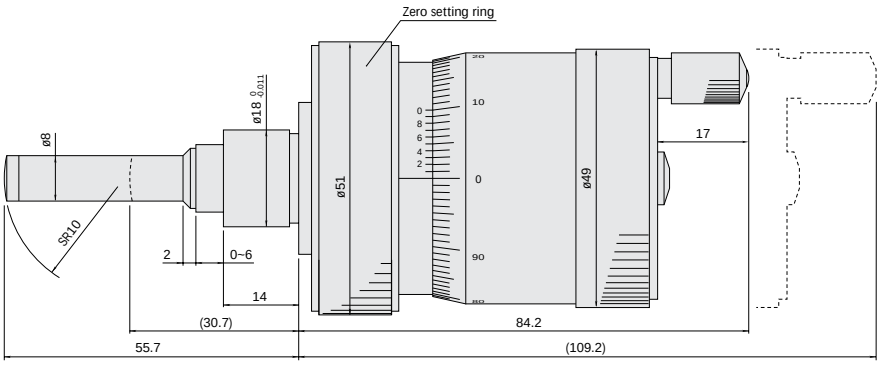

152-389, 152-391

•The thimble can be rotated to the better reading position by maintaining the spindle position.

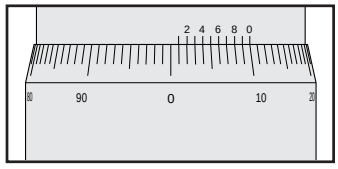

Plain stem

152-402

Mass (g): 460

152-401

•The zero setting ring allows spindle movement without thimble position change for easy zero setting.

( ): When retracting the spindle until its stroke end.

Series 197

Large thimble 1mm (.025") pitch Non-rotating spindle

Spindle face: Carbide tip
More than HRC90
Lapped surface
Scale surface: Hard-Chrome plating
Fixture thickness: 22.5mm

Non-rotating spindle micrometer head with large thimble.

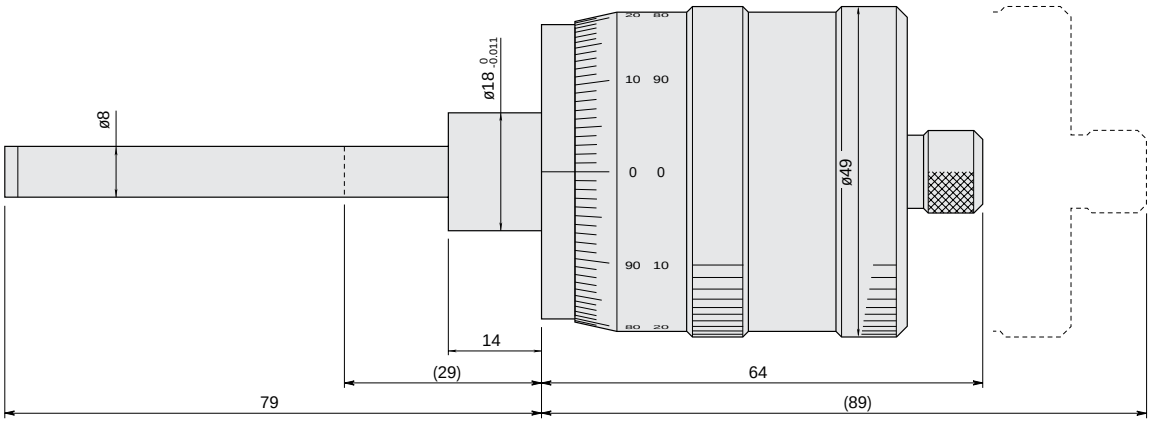

1mm spindle pitch allows quick feeding and positioning. Large thimble provides clear reading of thimble graduation and increases measurement efficiency. Non-rotating spindle avoids workpiece rotation for torsion-free feeding and reduces workpiece deformation and wear.

Unit: mm

Plain stem

197-101, 197-201

Mass (g): 300

•The thimble can be rotated to the better reading position by maintaining the spindle position.

Mass (g): 125

Functions

- Origin Setup function (ABS measuring system)
  Stores the minimum value in the measuring range as the origin. An origin value can be set up according to each size of micrometer heads.
- Zero-set function (INC measuring system)
  Can clear (zero-set) a display value at any position, allowing comparison measurement with ease. Even after zero-setting an absolute value from the origin (ABS measuring system) can be restored.
- Hold function
  Can hold a display value. Resetting this function restores the most recent zero-set position or measured value from the origin. The function is convenient to perform measurement at a position where a display value is hard to read.
- Measurement Data Output function
  Allows the configuration of a statistical process control system or an instrumentation system with the measurement data output terminal. In this case the optional connecting cable is separately necessary. Optional connecting cable for coolant proof type: 05CZA662 (1m/40") or 05CZA663 (2m/80"), for standard type: 937387 (1m/40") or 965013 (2m/80")
- Auto-power ON/OFF function
  Turns off the LCD if the micrometer head is not in use for about 20 minutes. The origin (preset value) in the ABS measuring system still remains in memory and the display is recovered by rotating the spindle again.
- Error Alarm function
  Displays an error message on the LCD and stops the measuring function if an overflow or calculation error occurs. No measurement can be continued while the error message is displayed. The function also lights the B mark to indicate that the battery is used up when its voltage becomes low before disabling measurement.

Specifications

- IP65 protection level:

Category	Level	Definition
Protection against human contact and foreign matters	6: Hermetically sealed from dust and dirt	Protects the head from incoming of dust and dirt and absolutely protects it from human contact.
Protection against water	5: Splash-proof type	There should be no harmful effect even if the head is subject to direct water splash *1 from any direction.

*1: Description of direct water splash
Water with a pressure of 30kPa and a flow rate of 12.5 L/min is splashed onto the external surface of 1 m^2 for a total of 3 minutes or more using a nozzle of I.D. 6.3mm.

- Power supply: SR44 (1 pc.)
- Battery life: Approximately 8 months in normal use
- Quantizing error: ±1 count

( ): When retracting the spindle until its stroke end.

Digimatic data processor

Mitutoyo Digimatic data processors are able to collect data from Digimatic micrometer head and print out statistical information, control charts and histograms using built-in printer.

DP-1VR

Series 164

Digimatic micrometer head

Spindle face: Carbide tip
More than HRC90
Lapped surface
Body material: Plastic (Black)

Digimatic micrometer with LCD display for digital readout

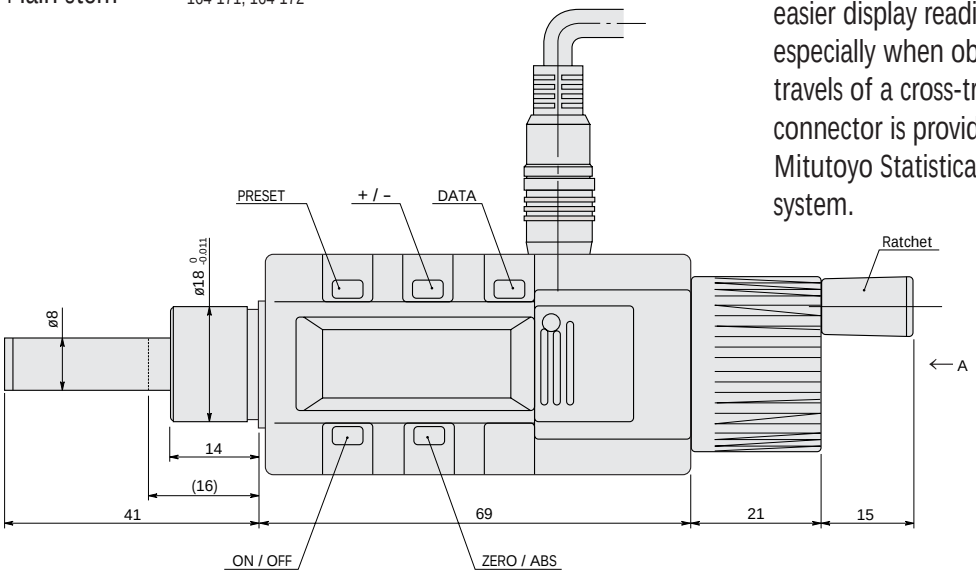

- 25mm/1" type with non-rotating spindle
  Thanks to the compact body design, this Digimatic micrometer head is able to be installed into small size microscopes and precision instruments. One data output connector is provided to be linked to the Mitutoyo Statistical Process Control (M-SPC) system.
- 50mm/2" type with non-rotating spindle
  The LCD panel can be rotated within 330° for easier display reading. This is very convenient especially when obtaining X- and Y-axis linear travels of a cross-travel stage. One data output connector is provided to be linked to the Mitutoyo Statistical Process Control (M-SPC) system.

Unit: mm

Plain stem

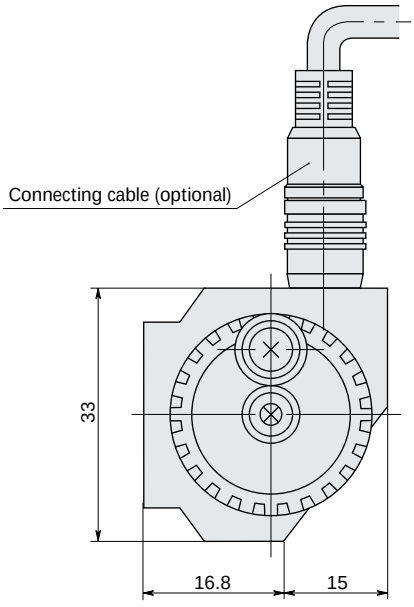

164-171, 164-172

Mass (g): 750

Functions

- PRESET button (origin point setting)
  Any value from +999.999 to -999.999 can be set as an origin point in ABS mode.
- ZERO/ABS button
  The measurement mode is changed from ABS to INC mode and the display indication is set to zero by clicking on the button.
  The measurement mode is changed from INC to ABS mode and the display indication is restored to the current spindle position in ABS mode by holding down the button.
- +/- button
  The counting direction can be changed.
- Data output function
  One data output connector is provided to be linked to the Mitutoyo Statistical Process Control (M-SPC) system as well as remote display counter SD-D1/D2. Optional connecting cable: 937387 (1m/40"), 965013(2m/80")

Made-to-order micrometers

Mitutoyo micrometer heads are used in various application fields. Although various ready-made micrometer heads are provided to meet various customer demands, customization is still required to meet more suitable specification.
Mitutoyo offers such “made-to-order” micrometer head even from one piece production onwards.

1. Spindle

Long spindle is also available.

- Standard (flat)

- Spherical

- Point

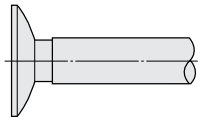

- Spline

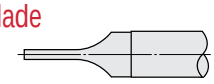

- Internal screw thread

- Flange

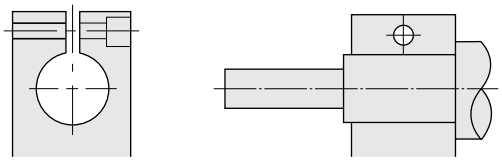

- Blade

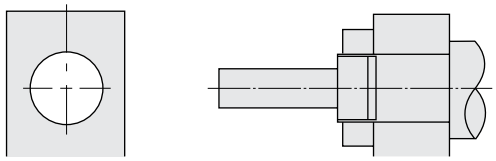

2. Stem

Various stem types are available according to your fixing specification.

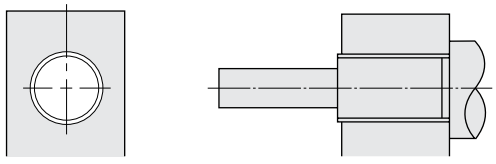

- Plain

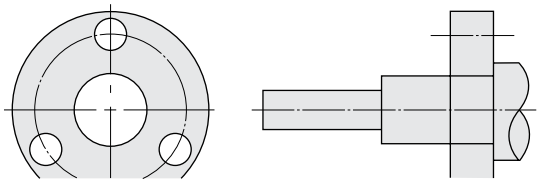

- With clamp nut

- Whole screw thread

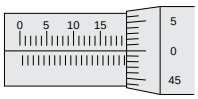

- Flange

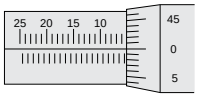

3. Graduation

Reverse graduation, vertical graduation, etc. are available. The color of figure and graduation on the thimble can be changed from normal black to red.

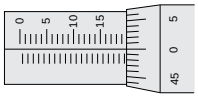

- Standard

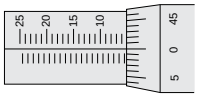

- Reverse

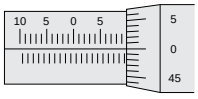

- Vertical

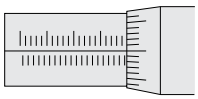

- Vertical & reverse

- Specified zero point

- Graduation only

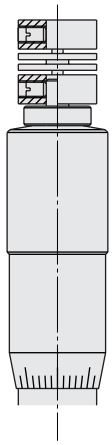

4. Special logotype

Your company logotype can be marked on the thimble.

5. Thimble attachment for motor drive operation

Several thimble attachments for motor drive operation by gear, round-belt, flat-belt, timing-belt, etc. are available. Solid-constructed thimble and attachment is available.

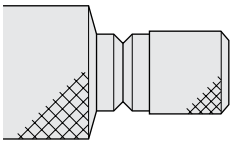

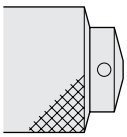

6. Thimble setting

Ratchet, set screw and hex-socket head screw are available for thimble setting.

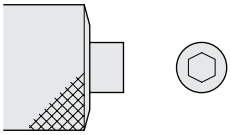

•Ratchet

•Set screw

•Hex-socket head

7. Spindle pitch

The standard spindle pitch is 0.5mm. 1mm pitch for quick feeding and 0.25mm pitch for fine feeding are available. Inch pitch is also available.

8. Screw lubricant

Screw lubricant can be specified for your application.

9. All-stainless steel model

All-stainless steel micrometer head is available.

10. Simple packing

Simplified packing is available for large quantity like an OEM purpose.

11. Precision lead screw

Precision lead screw (lead screw and nut) is available for your application.
Refer to page 32 and 33.

12. Accuracy inspection certificate

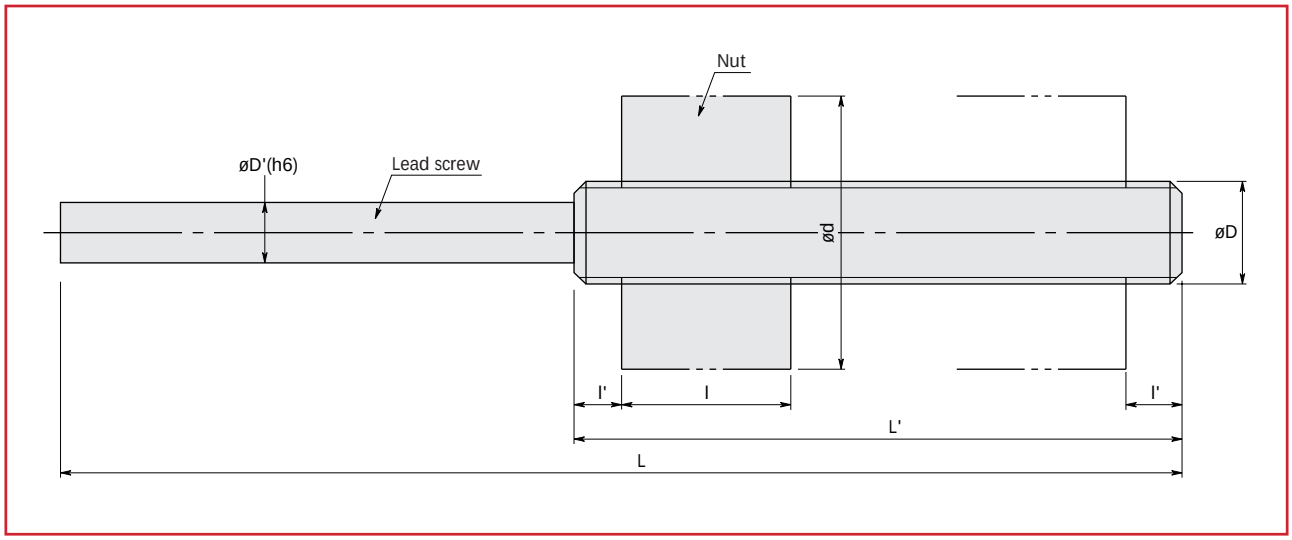

Mitutoyo is able to supply a micrometer head together with its accuracy inspection certification, at a nominal rate.

Precision lead screw

Mitutoyo offers “made-to-order” precision lead screw which is produced according to your specification under precise and accurate screw machining technology backed by long experience in micrometer production.

Type A

l’=P (pitch) x 5 (mm)
E.g.: If P is 0.5mm, must design “l’ = 2.5mm” and “Stroke ≤ L’ - (l + 2l’)”

Material

•Lead screw: SKS3 or equivalence (harder than HRC60.5)
•Nut: Easy-cutting steel (Brass is available.)

Accuracy

•Feeding accuracy: 0.002mm
•Screw/nut clearance: 0.005mm
•Feeding deflection (lead screw): Less than 0.003mm
•Feeding deflection (nut mounting surface): Less than 0.005mm

Remarks for order

•Lead screw
1. Specify øD, øD’, L, L’ and P dimensions.
2. Specify both end machining whether there is a need or not and the shape of each end if it is necessary.

•Nut
1. Specify external shape, length and mounting specification.
2. Specify a material to be used

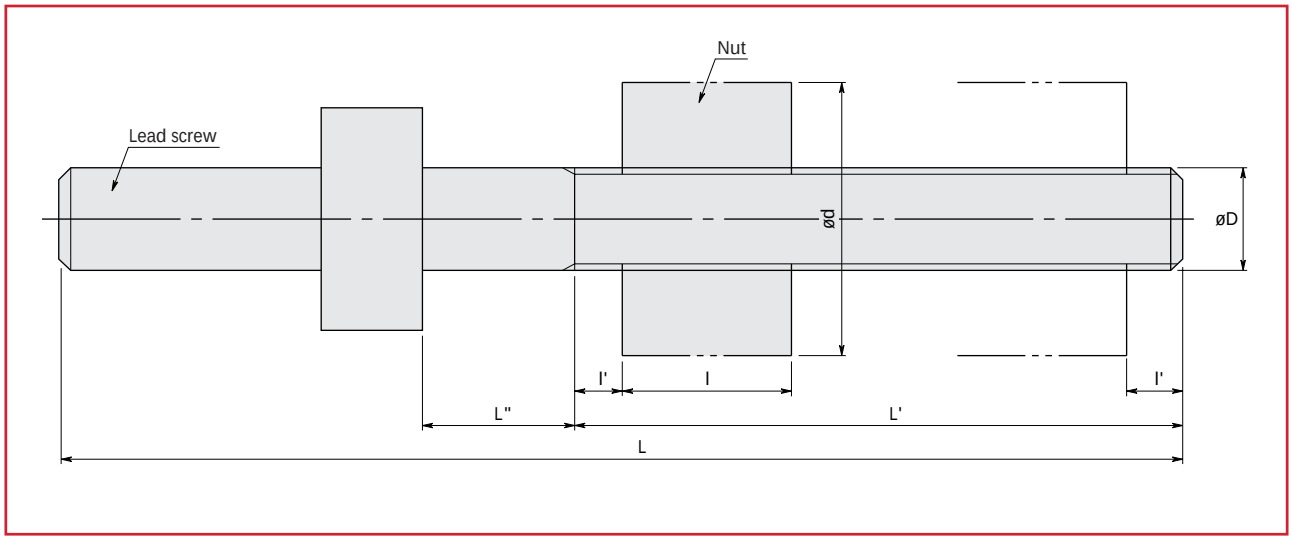

Specifications

(Unit: mm)

Screw dia. øD	Screw pitch P		Stem dia. øD’(max.)		Screw length L (max.)	Thread portion length L’ (max.)	Nut dia. øD (min.)
3	0.5		2		30	20	4.3
4.5	0.5		3.5		35	20	6.5

Micrometer head fixtures

Do you spend money on troublesome production of micrometer head fixture? Mitutoyo offers various fixtures which are well designed for customer convenience. All fixtures are made of cast iron (FC45 with nickel plating).

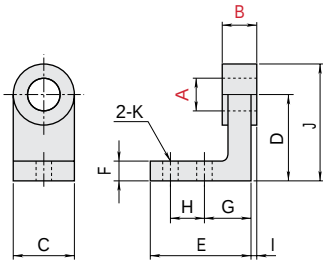

Micrometer head / Fixture reference table

Micrometer head	Fixture	Applicable stem specifications
Series 148 (Page 8, 16)	303560, 303562, 303564, 303566	ø9.5 X 9.5mm plain stem
	303559, 303561, 303563, 303565	ø9.5 X 9.5mm stem with clamp nut
Series 149 (Page 9)	303569, 303571, 303573, 303575	ø9.5 X 15mm plain stem
	303568, 303570, 303572, 303574	ø9.5 X 15mm stem with clamp nut
Series 150 (Page 10, 11)	303579, 303581, 303583, 303585	ø10 X 15mm plain stem
	303578, 303580, 303582, 303584	ø10 X 15mm stem with clamp nut

Fixture self-production guide

When mounting the micrometer head, it is fixed with its stem. Therefore the secured stem clamping method without affecting inside mechanism must be chosen for accuracy. Although the most popular three clamping methods are introduced below, Mitutoyo recommends the use of “Clamp nut” or “Slotted fixture” method.

Fixing method	Using clamping unt	Using slotted fixture	Using set screw
			
Mounting hole fitting tolerance value (mm)	ø9.5, ø10mm stem: G7 (+0.005 to +0.020) ø12, ø18mm stem: G7 (+0.006 to +0.024)	ø9.5, ø10mm stem: G7 (+0.005 to +0.020) ø12, ø18mm stem: G7 (+0.006 to +0.024)	ø9.5, ø10mm stem: H5 (+0.000 to +0.006) ø12, ø18mm stem: H5 (+0.000 to +0.008)
Remarks	•Take care the perpendicularity of the plane A against the setting hole. •Tolerance of perpendicularity: Less than 0.16/6.5 (same as that of grade 2 screw center tolerance value)	•Remove carefully burr on the slot.	•Suitable set screw size: M3X0.5 or M4X0.7 •Countersink on the stem: Less than 90°X0.5 When countersinking, take care not to cause stem deformation.

Maximum load of micrometer head

The maximum loading capacity of micrometer head cannot be quantified since it varies according to the clamping method, type of the load applied (statistic load or active load) and operating conditions (used as a feeding device or stopper). Mitutoyo recommended loading limit value is as follows when the micrometer head is used as a measuring instrument within its accuracy guaranteed stroke (within 1 million manual rotations). The static load test result carried out by using a small size micrometer head is also mentioned below.

1. Maximum loading capacity

	Micrometer head	Maximum load
Standard type:	0.5mm spindle pitch models	Up to 4kg/2kg*
Other types:	0.25mm spindle pitch models	Up to 1kg
	0.5mm spindle pitch models	Up to 4kg
	1.0mm spindle pitch models	Up to 6kg
	Ultra-small/Small size models	Up to 2kg
	Non-rotating spindle models	Up to 2kg
	Fine feed models	Up to 2kg

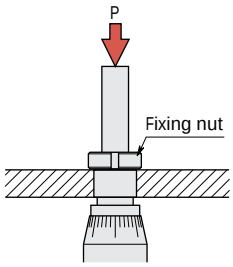

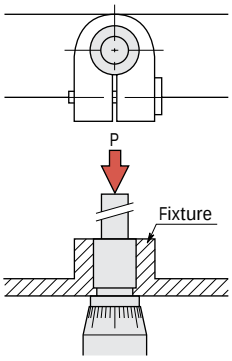

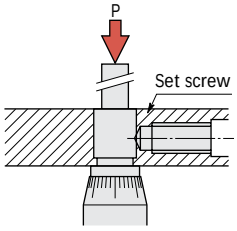

*Ulta-small and small size models

2. Static loading tast

(148-104, 148-103 used)

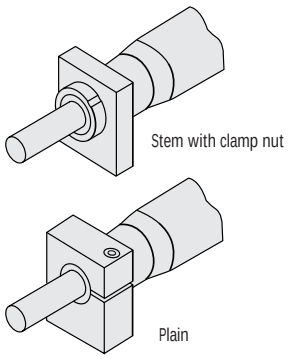

Test conditions

After setting each micrometer head as shown below, apply the test load from "P" direction by using a material testing machine. In increasing the test load, measure the test load at the time when the mirometer is borken or dropped out from the fixture.

		
Using clamp nut	Using slotted fixture	Using set screw
The micrometer heads are broken at 880kg to 1000kg load.	The micrometer heads are dropped from the fixture at 70kg to 100kg load.	The set screw are broken at 70kg to 110kg load.

Micrometer head selection guide

The measuring range, spindle face, stem type, graduation, thimble diameter, etc. must be considered for the selection of the most suitable micrometer head for your application. Mitutoyo provides "Micrometer Head Selection Guide" for your reference as below.

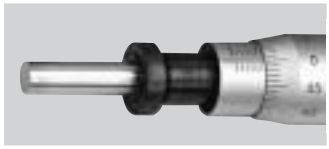

Stem

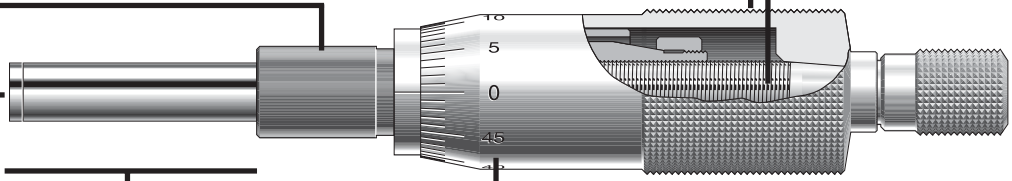

Plain stem

Stem with clamp nut

- The stem is a part to be used for micrometer head clamping. It is classified into "Plain stem" or "Stem with clamp nut". The stem diameter is designed according to the size of the micrometer head itself. The upper and lower tolerance limit values are mentioned on the catalog with h6 specification.
- The micrometer head with clamp nut can be fixed to the stage easily and firmly. While additional preparation of slotting or adhesive bonding is necessary for the plain stem type. However, the plain stem type has a wider applicable range and allows stem position tuning in forward/backward direction.
- Mitutoyo offers various optional fixtures for general use. Refer to page 34.

Spindle face

Flat spindle

Spherical spindle

Non-rotating spindle

- The micrometer head with a flat spindle is generally used for a measuring instrument.
- The micrometer head with a spherical spindle is suitable for a feeding device since the feeding error caused by the inclined installation can be minimized. (Fig A) The combination of a carbide ball and flat spindle (Fig B) provides the same effect as Fig A.
- Mitutoyo recommends the use of the non-rotating spindle type micrometer head when it is used for the delicate or high-accuracy application. (Fig C)
- The flat spindle and flat contact surface combination is recommended for high-durable applications.

Figure A

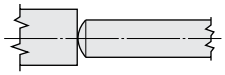

Figure B

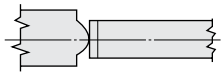

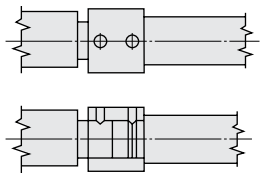

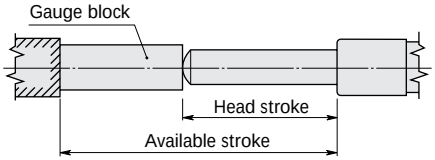

Figure C

Measuring range (spindle stroke)

- Six measuring ranges from 5 to 50mm are available for standard type micrometer head. Choose the suitable range by considering some allowance for spindle movement.
- Even though the required measuring range is 2 or 3mm, choice of 25mm range model is more economical if there is enough space for installation.
- The measuring range can be extended by using a gauge block. (Fig D)
- The broken line on each micrometer head drawing shows the thimble position at the stroke end. Carefully consider this point for your jig design.

Spindle lock

When using the micrometer head as a stopper, Mitutoyo recommends to use a micrometer head with spindle clamp to avoid problem due to a loose spindle. Special clamping mechanism is employed to eliminate spindle displacement at clamping.

Non-rotating spindle

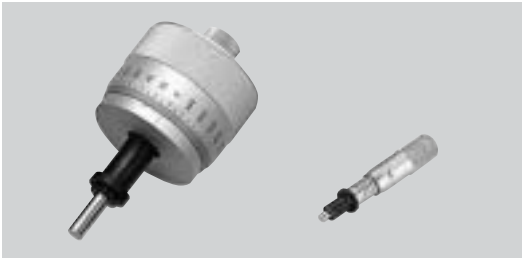

The spindle is fed straight without rotation. This avoids workpiece rotation for torsion-free feeding and reduces workpiece deformation and wear.

Ultra-fine feed

Ultra-fine feed micrometer heads employ the differential movement mechanism which are available for the applications requiring ultra-fine feeding like a manipulator.

Thimble diameter

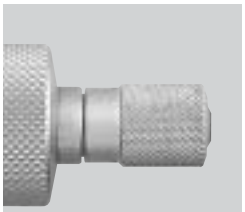

Thimble diameter is closely related with thimble graduation and operation efficiency. Small thimble allows quick positioning, while large thimble allows fine graduation. The large thimble type with a feeding knob provides both advantages.

Spindle pitch

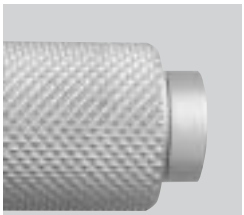

1mm spindle pitch

- 0.5mm: Standard
- 1mm (.25”): 1mm/rotation spindle allows quick feeding and positioning and high-loading capacity. This eliminates misreading of 0.5mm graduation on the sleeve.
- 0.25mm: 0.25mm/rotation spindle allows fine feeding and precise positoning.

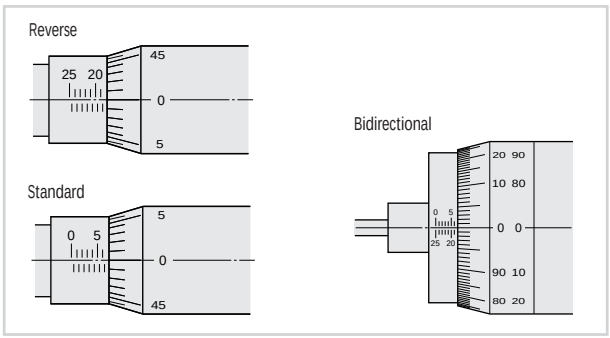

With constant force device (ratchet)

Without constant force device

Constant force device

- Mitutoyo recommends to choose a micrometer head with a constant force device (ratchet) when it is used as a measuring tool.
- Micrometer head without constant force device is suitable for a stopper and space priority applications.

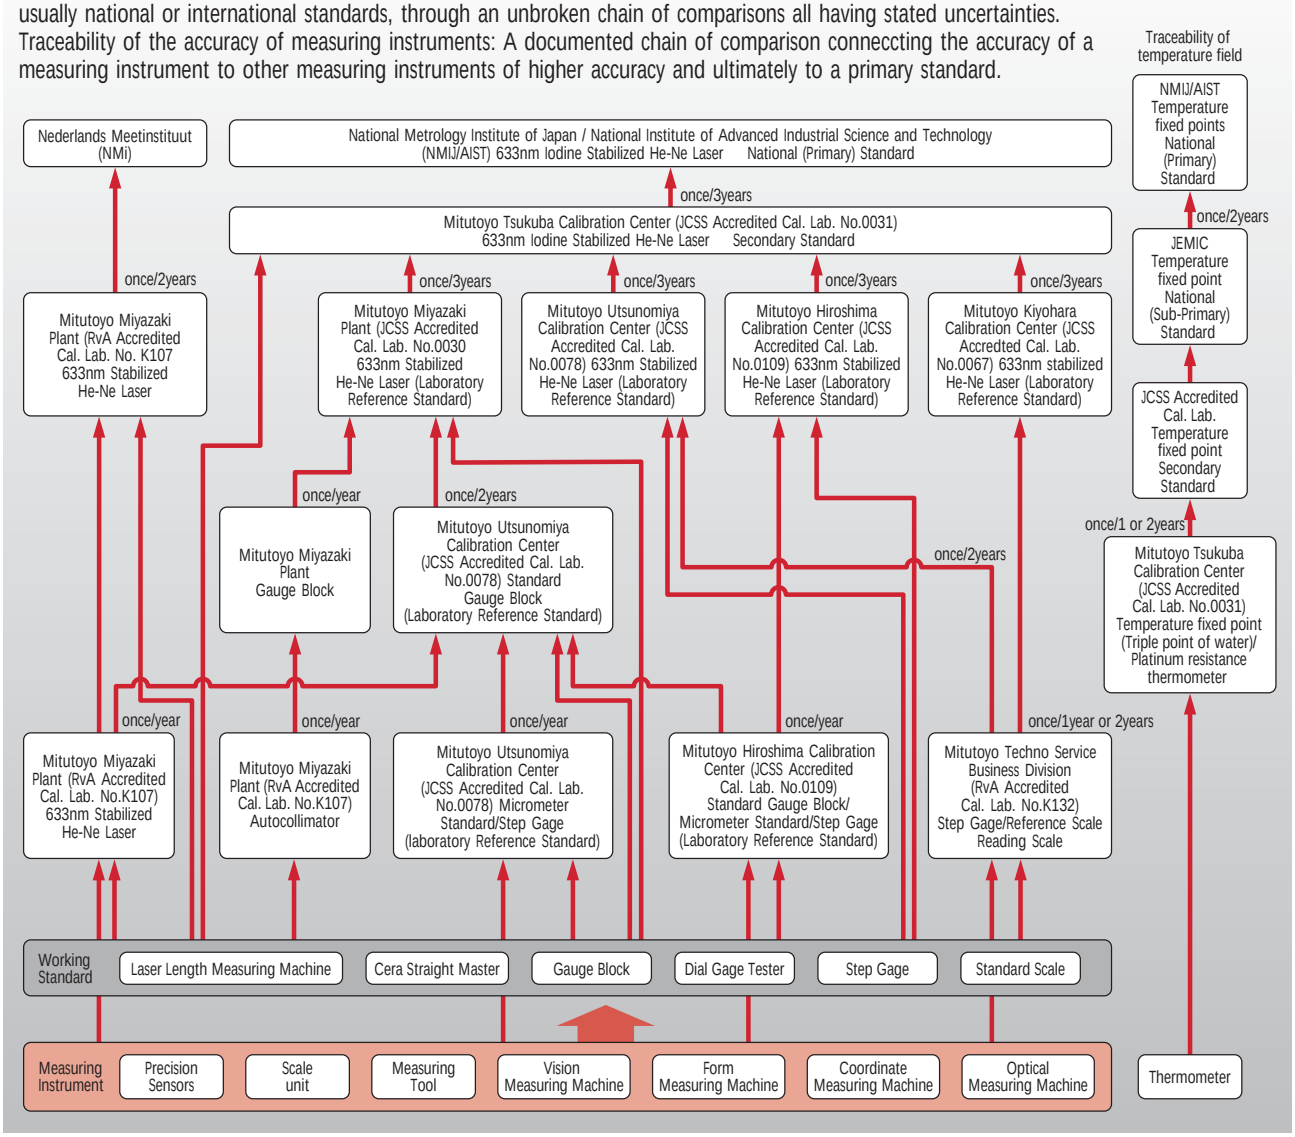

Graduation

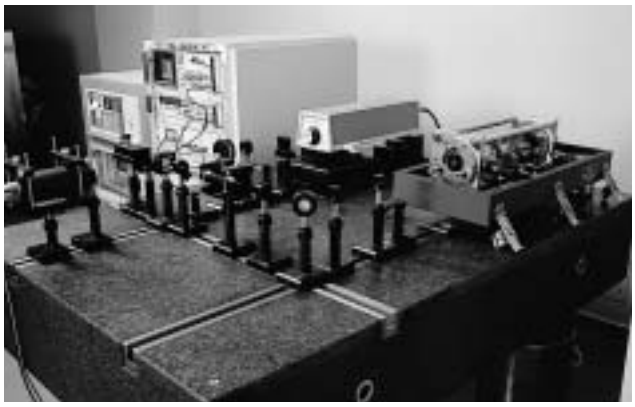

- If you want to obtain (read) the spindle displacement, pay attention to the specifications of the thimble/sleeve graduation.
- ”Standard” graduation is the same graduation as an outside micrometer. When retracting the spindle, positive counting is provided.
- ”Reverse” graduation provides positive counting when projecting the spindle.
- ”Bidirectional” graduation provides both positive and negative counting. The figures on thimble and sleeve are specified by color (black and red) for clear reading.
- Digimatic and electronic micrometer heads which have an internal or external display counter are available for direct reading. These micrometer heads can be linked to the Mitutoyo Statistical Process Control (M-SPC) system.

Traceability System to National Standard

Traceability system of length standard

Traceability: Property of the result of a measurement or the value of a standard whereby it can be related to stated reference, usually national or international standards, through an unbroken chain of comparisons all having stated uncertainties.
Traceability of the accuracy of measuring instruments: A documented chain of comparison connecting the accuracy of a measuring instrument to other measuring instruments of higher accuracy and ultimately to a primary standard.

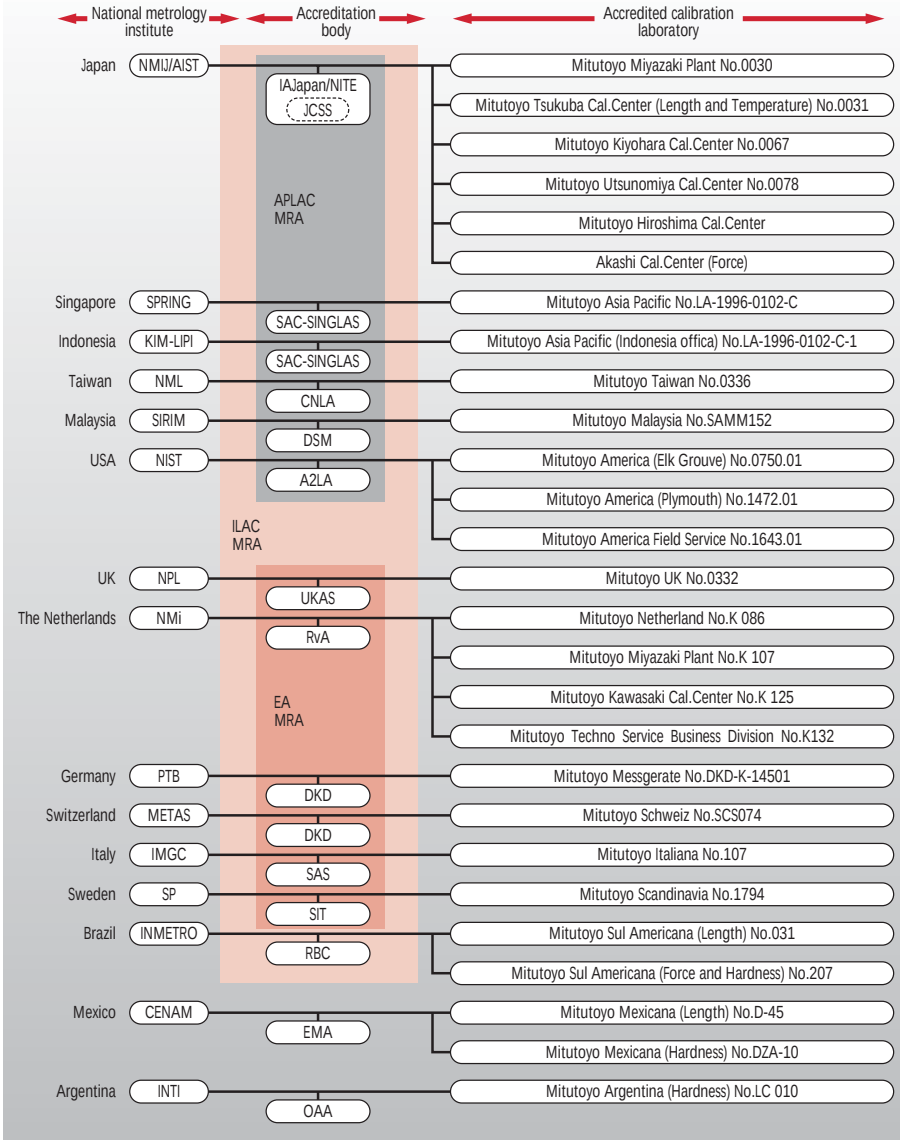

Iodine Absorption Stabilized He-Ne Laser as the standard for length measurement (At Tsukuba Calibration Center)

Interferometer as the standard for Gauge Blockcalibration (At Miyazaki Plant)

Mitutoyo Group Accredited Calibration Laboratories

Interferometer as the standard for Linear Scalecalibration (At Kiyohara Plant)

Mitutoyo comprises 24 accredited calibration laboratories posted worldwide as illustrated schematically above, where each of the labs has established and implemented traceability of their reference standards through calibration to nationally or internationally recognized standards. It is with such a traceability system implemented within Mitutoyo that it can contribute to industries worldwide in helping customers implement the base for their quality management and quality assurance program.
