MiniDigi 1A Properties

Published 11/09/2010 11:53 AM | Updated 04/01/2011 12:26 AM | Answer # 17395

I have just received a **MiniDigi 1A** with my order of pCLAMP. Do I need it to run my acquisition?

The **MiniDigi 1A** is a small hardware device that is shipped with pCLAMP with orders of pCLAMP 10 except orders that are upgrades from pCLAMP 9 since these customers already received the **MiniDigi 1A** when they purchased pCLAMP 9. It is not sold separately.
The **MiniDigi 1A** is a small digitizer that is designed to acquire up to 2 input signals but has no outputs. Each of the two channels records data up to 1 kHz frequency. The **MiniDigi 1A** can only be detected using AxoScope 9 or AxoScope 10. It complements the use of Clampex during acquisition. Clampex acquires data through the Digidata, whereas AxoScope simultaneously acquires data using the **MiniDigi**. The acquisition can be accomplished using a single computer with AxoScope and Clampex running concurrently. The basic premise is to provide our customers an alternative to using paper chart recorders. AxoScope can be used as a substitute through the **MiniDigi** to acquire data continuously.

The bottom line is that the **MiniDigi 1A** is not required for acquisition, but it can be a useful tool if you need to acquire data in a chart recorder-like fashion when you are using Clampex for other purposes.
