NI ENET-232/4

4-Port Ethernet Interface for RS232

- NI-SDS driver software for Windows 7(32-bit)/Vista/XP(32-bit)/2000/NT
- Handles RTS/CTS hardware handshake lines
- RS232 ports appear on screen as standard PC serial ports
- Works with Linux and Solaris through NI-VISA
- 10/100BaseT Ethernet input
- NI LabVIEW Real-Time compatibility for deterministic control

Overview

The National Instruments Ethernet serial interfaces provide additional RS232, RS422, and RS485 ports to your computer through standard Ethernet networks. The Ethernet serial interfaces connect to either 100BaseTX (100 MB/s) or 10BaseT (10 Mbit/s) Ethernet networks and provide asynchronous serial ports. The NI-SDS driver software detects and installs the Ethernet serial interfaces, making the Ethernet layer completely transparent; the additional serial ports are accessible and programmed exactly as the native serial ports on your computer. You can choose from 2- and 4-port versions of the Ethernet serial interfaces. The NI ENET-232/4 is a 4-port, RS232 serial interface. All National Instruments serial interfaces are shipped with NI-SDS driver software, which provides high-level functions for rapid application development. You can install and use the NI Ethernet serial interfaces as standard serial ports for your existing applications or with applications written with NI-VISA.
