ENET-485/2 *2-Port Ethernet Interface for RS485/RS422*

- **Not recommended for new designs.**
- 10/100BaseT Ethernet input
- Ports appear on screen as standard PC serial ports
- Handles RTS/CTS hardware handshake lines
- Works with Linux® and Solaris through NI-VISA
- LabVIEW Real-Time compatibility for deterministic control

NI Ethernet serial interfaces provide additional RS232, RS422, and RS485 ports to your computer through standard Ethernet networks. They connect to either 100BaseTX (100 MB/s) or 10BaseT (10 Mb/s) Ethernet networks and provide asynchronous serial ports. The NI-SDS driver software detects and installs the Ethernet serial interfaces, making the Ethernet layer completely transparent; the additional serial ports are accessible and programmed exactly as the native serial ports on your computer. You can choose from 2- and 4-port versions of the Ethernet serial interfaces. The ENET-485/2 is a 2-port, RS485 serial interface.

All NI serial interfaces are shipped with NI-SDS driver software, which provides high-level functions for rapid application development.

You can install and use the NI Ethernet serial interfaces as standard serial ports for your existing applications or with applications written with NI-VISA.

Linux® is the registered trademark of Linus Torvalds in the U.S. and other countries.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
