Overview | Pricing | Resources

The National Instruments LFH160 cable provides connectivity to the NI PXI-2576 multibank multiplexer switch module. The cable terminates in four separate 50-pin D-Sub connectors. You can connect these to the NI TBX-50 screw-terminal block, which exposes each channel of the switch module to screw terminals.

The LFH160 cable simplifies the connectivity in complex switch systems while adding ruggedness and stability to your test system.
