NI 9269

4 AO, ±10 V, ±40 V Stacked, 16 Bit, 100 kS/s/ch Simultaneous

- Screw-terminal connectivity
- 250 Vrms, CAT II, channel-to-channel isolation

The NI 9269 is a four-channel, 100 kS/s per channel, channel-to-channel isolated module for any NI CompactRIO and NI CompactDAQ chassis. Similar to the NI 9263 module, the NI 9269 adds channel-to-channel isolation for increased safety, improved signal quality, and the ability to stack channels to output up to 40 V. NI CompactDAQ support has been added as of NI-DAQmx Version 9.1 Channel-to-channel isolation is commonly needed for applications that have multiple electrical systems, such as automotive test, or industrial applications that are subjected to increased noise and often contain multiple ground planes.

Circuitry

The analog output channels are floating with respect to earth ground and each other. Each channel has a digital-to-analog converter (DAC) that produces a voltage signal. Each channel

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

provides an independent signal path, enabling you to update all four channels simultaneously. Each channel also has overvoltage and short-circuit protection.

NI 9269 Specifications

The following specifications are typical for the range -40 °C to 70 °C unless otherwise noted. All voltages are relative to the AO- signal on each channel unless otherwise noted.

Caution Do not operate the NI 9269 in a manner not specified in this document. Product misuse can result in a hazard. You can compromise the safety protection built into the product if the product is damaged in any way. If the product is damaged, return it to NI for repair.
