PXI ARINC 429 Interface Module

Provides PXI bus interfaces for ARINC 429 protocols.

The PXI ARINC 429 Interface Module offers onboard processors that automatically handle all protocol-related activity including transmit scheduling and receive buffering. It supports periodic and asynchronous messages and sequential monitoring and timestamping. Each ARINC 429 channel supports programmable bit rate frequency. Some models also offer parametric waveform capability, which provides control over transmit amplitude, offset and null voltages, common-mode bias, rise time, and fall time. Module applications include test, simulation, and operational uses of avionics data buses. With extensive error detection and generation capability, the interface is well suited for product development, production, and system test.

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.
