INGAAS 125-MHZ PHOTORECEIVER MODEL 1811-FC

The near-IR Model 1811 offers a well-balanced combination of gain, bandwidth, and low noise over the DC-125-MHz frequency range. Because of their high transimpedance gain and low noise-equivalent power (NEP), they offer the best in sensitivity for signals with rise and fall times as short as 3 ns. This high sensitivity, combined with their high-level output, reduces the effects of downstream noise sources. Wavelength range for the Model 1811 is 900-1700 nm.
