ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

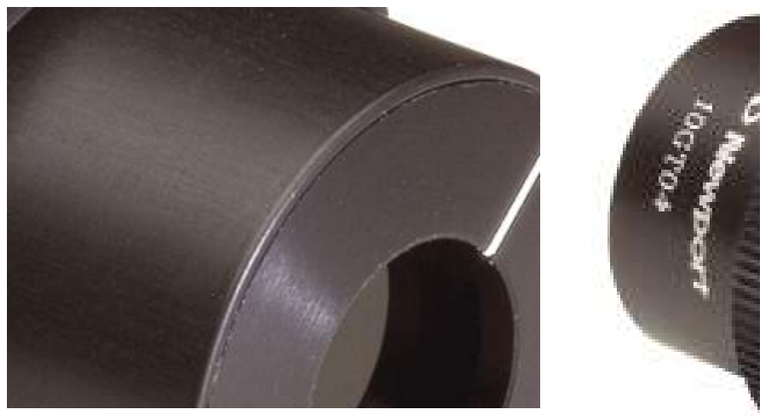

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

Overview

The 10GT04 Glan-Thompson Calcite Polarizer provides high purity linear polarization for broadband sources or multiple laser wavelengths. The large acceptance angle of this polarizer allows it to be used in highly converging or diverging beams. S-polarization is transmitted with Ts >90%, while p-polarization is reflected and absorbed into the housing. Our Glan-Thompson polarizers are fabricated from select-grade calcite prism pairs, cemented together and assembled into a black anodized aluminum housing. The cemented surface limits their use to lower power applications. The output polarization axis is clearly marked on the housing. The housing has been designed to mount into our standard 25.4 mm optic holders, rotary stages, and precision positioning components. This polarizer is uncoated.

**Calcite polarizers are made with natural crystals, and even in the best grade of calcite, there are embedded flaws which can not be corrected. The laser damage threshold value below was given for reference only and can not be guaranteed. **

Product Series Overview

Glan-Thompson Calcite Polarizers (/f/glan-thompson-calcite-polarizers)

Technical Specs

Diameter	25.4 mm	**Diameter Tolerance**	±0.25 mm
Wavelength Range	350-2300 nm	**Transmitted Beam Deviation**	<3 arc min
Material	Optical Grade Calcite	**Transmission**	35-40% at 350nm, 65-70% at 400 nm, 80-88% at 500 nm and longer wavelengths
Extinction Ratio	100,000:1	**Acceptance Angle**	14°–16°, full angle
Damage Threshold	1 W/cm² CW, 0.1 µJ/cm² with 10 nsec pulses, typical	**Wavefront Distortion**	≤λ/4 at 632.8 nm over the full aperture
Surface Quality	20-10 scratch-dig	**Maximum Temperature**	90°C
Clear Aperture	10.0 mm
