Order example: PTS-FOPM-SL0265

Dual-channel Fiber Optic Power Meter Module with Silicon detector, operating in the 400–1100 nm wavelength range, and SC/PC connector input.

The PTS-FOPM Series Fiber Optic Power Meters accept a direct fiber input to acquire power measurements in the 400–1800 nm wavelength range. Both single and dual-channel versions are offered, with five different input connector options to select from.

The low-noise 300 µm diameter detector and eight gain ranges, enable continuous power measurements from a low -100 dBm up to 3 dBm (2 mW).

Each module is individually calibrated to NIST-traceable standards using Newport's in-house calibration facility. Calibration data is taken in 10 nm increments, and electronically stored inside the module, resulting in accurate power measurements over the entire wavelength band.

A certificate of calibration as well as the actual calibration curves recorded are shipped with each module. Annual re-calibration is recommended to assure measurement accuracy.
