National Instruments considers the following baud rates to be standard. NI serial hardware supports these rates up to the maximum rate specified. Your device may also support additional baud rates not listed below:

300	2400	14400	57600	460800
600	4800	19200	115200	
1200	9600	38400	230400	

To set the baud rate, set the VISA Baud attribute or use the Windows SetCommState function and pass the actual value of the baud rate in the **BaudRate** field of the **DCB** structure.

Refer to *Hardware Specifications* for supported baud rates on each board.

Hardware Specifications

NI 9870 RS-232 C-Series Module

C-Series modules are for use with the NI CompactRIO platform. For complete module and system specifications, refer to the *NI 9870 Operating Instructions and Specifications*.

Specifications

The following specifications are typical for the range –40 to 70 °C unless otherwise noted.

Maximum baud rate ..... 921.6 kbps

The NI 9870 supports arbitrary baud rates according to the following equation:

*BaudRate = 3.6864 Mbps / (Prescaler * Divider)*

Prescaler can be {4, ..., 65535}.

Divider can be 1 or 4.

As long as the actual baud rate is within 2% of the desired baud rate, communication errors should not happen.

Maximum cable length .....250 pF equivalent

Note Cable capacitance greater than 250 pF may adversely affect the maximum baud rate and thermal dissipation.

Maximum RS232 Receive signal
(RXD, CTS, DSR, DCD, RI)
Continuous Voltage .....±8 V

Note Continuous RS232 input voltages in excess of ±8 V may cause excessive thermal dissipation.

Data line ESD protection
(human body model).....±15 kV

MTBF .....448,008 hours at 25 °C; Bellcore Issue 6, Method 1, Case 3, Limited Part Stress Method

Note Contact NI for Bellcore MTBF specifications at other temperatures or for MIL-HDBK-217F specifications.

Power Requirements

Power consumption from chassis

- Active mode.....0.5 W max
- Sleep mode .....50 µW max

Thermal dissipation (at 70 °C)

- Active mode.....1.5 W max
- Sleep mode .....0.5 W max

Required external supply
voltage range (V_{SUP}).....+8 to +28 VDC

Power supply consumption from external supply V_{SUP}

Typical ..... 0.5 W

Maximum ..... 2 W

Physical Characteristics

If you need to clean the module, wipe it with a dry towel.

Weight ..... Approx. 154 g (5.4 oz)

Safety

Maximum Voltage[1]

Connect only voltages that are within these limits.

RS232 Receive Signal-to-COM
(RXD, CTS, DSR, DCD, RI) ..... ±25 V max,
Measurement Category I

RS232 Transmit Signal-to-COM
(TX, RTS, DTR) ..... ±13.2 V max,
Measurement Category I

V_{SUP}-to-COM ..... ±28 V max,
Measurement Category I

Measurement Category I is for measurements performed on circuits not directly connected to the electrical distribution system referred to as *MAINS* voltage. MAINS is a hazardous live electrical supply system that powers equipment. This category is for measurements of voltages from specially protected secondary circuits. Such voltage measurements include signal levels, special equipment, limited-energy parts of equipment, circuits powered by regulated low-voltage sources, and electronics.

Caution Do *not* connect to signals or use for measurements within Measurement Categories II, III, or IV.

Isolation Voltages

Port-to-earth ground

Withstand ..... 1000 V_{rms}, verified by a 5 s dielectric withstand test

Continuous ..... 60 VDC,
Measurement Category I

[1] The maximum voltage that can be applied or output without creating a safety hazard.

Shock and Vibration

To meet these specifications, you must panel mount the CompactRIO system.

Operating vibration,
random (IEC 60068-2-64) .....5 g_{rms}, 10 to 500 Hz

Operating shock
(IEC 60068-2-27) .....30 g, 11 ms half sine,
50 g, 3 ms half sine,
18 shocks at 6 orientations

Operating vibration,
sinusoidal (IEC 60068-2-6) .....5 g, 10 to 500 Hz

Environmental

CompactRIO modules are intended for indoor use only. For outdoor use, mount the CompactRIO system in a suitably rated enclosure. Refer to the installation instructions for the chassis you are using for more information about meeting these specifications.

Operating temperature .....–40 to 70 °C

Storage temperature .....–40 to 85 °C

Ingress protection .....IP 40

Operating humidity.....10 to 90% RH, noncondensing

Storage humidity.....5 to 95% RH, noncondensing

The NI 9871 supports arbitrary baud rates according to the following equation:

*BaudRate = 3.6864 Mbps / (Prescaler * Divider)*

Prescaler can be (4..65535).

Divider can be 1 or 4.

As long as the actual baud rate is within 2% of the desired baud rate, communication errors should not happen.
