NI TB-2627

Front-Mounting Terminal Block for the NI PXI-2527 Switch

- Signal connectivity for the NI PXI-2527 multiplexer switch module
- Signal connections through screw terminals
- Cold-junction compensation sensor for thermocouple measurements
- HV6 connector available for simple digital multimeter (DMM) connectivity

Overview

The National Instruments TB-2627 terminal block is used to make signal connections to the NI PXI-2527 multiplexer switch. With screw terminals available to accommodate any configuration of the switch, the NI TB-2627 offers an easy way to quickly connect signals for prototyping applications or system deployment. Additionally, you can simplify connectivity with a digital multimeter (DMM) through the use of the HV6-BAN4 cable, which connects the banana jack inputs of a DMM to the COMs of each multiplexer bank. The TB-2627 includes a cold-junction compensation sensor for more accurate thermocouple measurements.
