ARTISAN®
TECHNOLOGY GROUP

Your **definitive** source for quality pre-owned equipment.

Artisan Technology Group
(217) 352-9330 | sales@artisantg.com | artisantg.com

Full-service, independent repair center
with experienced engineers and technicians on staff.

We buy your excess, underutilized, and idle equipment
along with credit for buybacks and trade-ins.

Custom engineering
so your equipment works exactly as you specify.

- Critical and expedited services
- In stock / Ready-to-ship
- Leasing / Rentals / Demos
- ITAR-certified secure asset solutions

Expert team | Trust guarantee | 100% satisfaction

All trademarks, brand names, and brands appearing herein are the property of their respective owners.

U.S. Meridian 1 Product Catalog

Changes Since Publication

Please refer to the following website for current product delivery information: (http://www.nortelnetworks.com/partnercenter) or (http://www.nortelnetworks.com/partnercentre). Once there, partners should be able to access the site using their NIC login/password. Nortel Networks has provided a link in the page for any difficulties encountered or click on "feedback".

Please note the following changes to the U.S. Meridian 1 product catalog that occurred after the distribution of the April 17, 2000, product catalog.

- **Please note the following announcement:**
  - NTHU21AC - Option 81C Call Processor PII from XN/XT/71 (QCA55/108 Cabinets) Module Upgrade Package AC, and HTHU21DC - Option 81C Call Processor PII from XN/XT/71 (QCA55/108 Cabinets) Module Upgrade Package DC, have been removed as a recommended upgrade path. NTHU29 package is recommended.

- **Vintage change:**

Old Vintage	New Vintage	Description	Discount Category	Price
NTLH01AA	NTLH01AB	CD-ROM, X11 Release 25	No change	No change

Paper Copy Distribution Eliminated

The CSP will be sent by email only, providing product catalog information that has changed since publication of the last CSP or catalog. The Product Offer Communications group looks forward to providing you an enhanced level of service through the email CSP notification.

Please keep us informed of any changes in your email address to ensure our ability to provide you with timely updates of the CSP bulletins. Send your email address, along with your name, company name, and street address to **mbsgprs@nortelnetworks.com** or notify your District Sales Manager of the email address.

Option 11C Software Feature Set Upgrade

(Adding additional software features by exchanging Feature Set for higher level)

The Option 11C software delivery mechanism enables software feature packages to be activated via keycodes. This capability allows for much quicker and less expensive addition of optional software features since no cartridge will be required, a site specific keycode will activate the desired feature sets. The keycodes will be controlled via a security device which is system specific.

The following codes are used to change software features set on an existing Option 11C system. Additional features are added by purchasing a higher level feature code set. Refer to Appendix for detailed information on feature complements in each feature set. No credit is allowed for moving to a lower level.

Documentation is not included and must be ordered separately. Serial Number must be included with order.

Order one of these packages to upgrade to a new feature package within Option 11C.

Meridian 1 System Software
Options 51C-81C

The Meridian 1/SL-1 software pricing structure varies depending on system type and software generic and release. The following groups of Meridian 1/SL-1 software exist:

- X11 Release 22, 23, and 24 software (for use with Options 51C/61C/81/81C)
- X11 Release 21 software (for use with STE, RT, NT, XT and Option 81C)
- X11 Release 19-21 software (for use with STE, RT, NT, XT and Options 21E-81)
- X11 Release 15-17 software (for use with STE, RT, NT, XT and Options 21-71)

System/Software Compatibility

Because these software groups typically include multiple generics and releases, be sure to check the compatibility of a feature to ensure it can be added to your particular system. In some cases, only software updates are required to add a feature. In other cases, a system upgrade may be required. To assist you in making the right selections for your system, refer to the following:

- For system compatibility, see Reference Section (Book 2)
- For software release information, see "Meridian 1 Hardware/Software Status" in the General Section (Book 1)
- For further assistance, contact your Nortel Santa Clara Customer Response Center Representative

Capacity Requirements

The usage capacity of your system is determined by the Terminal Numbers (TNs) purchased. (TN is the software designation of a logical termination point, either physical or virtual, defined in Meridian 1 software.) Usually a single physical connection, such as a single basic telephone line, corresponds to one TN. However, some physical connections require more than one termination point. Lines designated as Consoles and Digital Voice/Data lines each use two TNs. DTI/PRI lines require 24 TNs. Although not physical terminations, the software requires one TN each for Meridian Mail and Digitone Receiver ports.

Base software pricing, as well as pricing for Base optional features, new releases, upgrades, and capacity changes for Meridian 1 system users is based on system port (TN) levels. Therefore, you should understand your TN

Status	Order Code	Description	CLP	Distr. Disc.

requirements well if you wish to optimize your cost. Ordering policies and procedures are found in the General Section.

Usage levels, based on the number of users in each case, serve as multipliers to determine the total price for adding features or expanding software capacity on the system. Optional system TN-based software features have maximum charge levels of 1000 TNs. For systems with more than 1000 ports, you need only purchase Meridian 1 Base software when expanding your system.

Charges for ACD, Meridian Link, ISDN BRI, RAN Broadcast, and Music Broadcast features are independently based on their unique usage.

Option 11C Software

Option 11C system software uses high-level software packaging and a graduated pricing structure based on usage capacity. Maximum charge levels do not apply to Option 11C software. There are four software packages available to Option 11C customers.

Software Updates/Replacements

When purchasing additional features and releases, issue updates, or replacing a damaged cartridge a new software cartridge will be sent to replace the current software. If additional feature packages are added to the same release of software, a new keycode is issued rather than new software media. Appropriate credits are issued when the replaced/damaged software cartridges are returned.

With the introduction of keycodes on the Option 11C, software package codes remain the same from release to release. For customers who want to upgrade to the current release, a new Software Upgrade code has been added. For example, an Option 11C customer who currently uses Release 22 General Business Package can order the Software Upgrade code (NTSF8712) to upgrade to Release 23 General Business Package.

Capacity Expansion

Each software cartridge is equipped with 200 system ports or TNs. For increased system port capacity, additional software can be purchased in increments of 100 TNs. Add-on cost is quoted in the price list per hundred TNs. Please refer to the Option 11C Reference and Pricing Reference sections for detailed information regarding purchasing additional system port capacity.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

X11 Software for Large Systems

X11 Large System Software uses a graduated pricing structure based on feature usage. Base software pricing, as well as pricing for optional Base features, new releases, upgrades, and capacity changes for Meridian 1 system users are based on system port (TN) levels.

ISDN BRI feature prices are based on the number of Digital Subscriber Loops (DSLs) needed for ISDN Base Rate Interface (BRI) features.

All ACD/Call Center and Message Processing features prices are based on the number of ACD Agents in the systems.

Meridian Link Module Software prices are based on the number of telephone sets that are to be controlled or monitored by a computer application connected to Meridian 1 via Meridian Link.

Base Features

Base software is priced in increments of 100 up to 1000, and in increments of 500 thereafter, as shown below:

Status	Order Code	Description	CLP	Distr. Disc.

Broadcast Features

The following features are introduced as of Release 23.

- Recorded Announcement Broadcast
- Music Broadcast

These features are priced independently of the overall system TN count and in increments of one connection with a system maximum of 9,999 connections. When provisioning Recorded Announcement Broadcast (RAN Broadcast) or Music Broadcast, the number of software "connections" ordered should be equal to the maximum number of people who can listen to the recorded announcement/music at any one time.

S ➤	SW0150A	Recorded Announcement Broadcast. Provides one software connection from a RAN source to incoming callers. Up to 48 callers can be connected to a single RAN source through 1 trunk port.	400.00	I
S ➤	SW0155A	Music Broadcast. Provides a software connection from a music source to incoming callers. Up to 64 callers can be connected to a single music source through 1 trunk port.	140.00	I

RAN Broadcast

RAN Broadcast Connections allow multiple callers to simultaneously listen to recorded announcements through a single trunk port via software. Each unit of SW0150A provides one RAN connection. Multiple RAN Connections are purchased by ordering multiple units of SW0150A. One RAN "connection" provides RAN services to one caller/listener.

RAN Broadcast pricing table

Number of Recorded Announcement Listeners	Number of RAN connection purchased
1	1
2	2
3	3
4	4
5	5
6	6
7	7
8	8
9	9
10+ (Note)	10+ (Note)
Note: Continues in increments of one, up to 9,999

Status	Order Code	Description	CLP	Distr. Disc.

Music Broadcast

Music Broadcast Connections allow multiple callers to simultaneously listen to music on-hold through a single trunk port via software. Each unit of SW0155A provides one music connection. Multiple music connections are purchased by ordering multiple units of SW0155A. One music "connection" provides music on-hold services to one caller/listener.

8	8
9	9
10+ (Note)	10+ (Note)
Note: Continues in increments of one, up to 9,999.	

ISDN/BRI Features

ISDN BRI features prices are based on the number of Digital Subscriber Loops (DSLs) used in the system. A DSL is the software designation of a BRI physical connection that accommodates two B-channels.

BRI features are priced in increments of 50 DSLs, as the following table shows:

X11 ISDN BRI software: DSL pricing table

Number of DSLs	DSL Level
1-50	1
51-100	2
101-150	3
151-200	4

ACD/Message Processing Features

All ACD/Call Center and Message Processing feature prices are based on the number of ACD Agents in the system. An ACD Agent is any TN with a Directory Number (DN) designated as an ACD DN in Meridian 1 software. Meridian Mail ports also count as ACD Agents.

ACD/Call Center and Message Processing feature prices are in increments of 20 from 1 to 200 agents and increments of 100 above 200 agents, as follows:

X11 ACD/Message Processing software: ACD agent pricing table

Number of ACD Agents	Agent Level

Meridian Link Associated Station (AST) Features

Pricing for the Meridian Link Module Software (SW0251A) is based on the number of telephone sets that are to be controlled or monitored by a computer application connected to Meridian 1 via Meridian Link. Each such set must be configured with the "AST" feature. A set with this feature is known as an "Associated Station" or AST set.

Each increment of Meridian Link Module Software increases the number of ASTs that can be controlled or monitored by Meridian Link.

Note: When the maximum level of 18 increments is ordered, the AST limit is set equal to the system TN limit.

X11 software AST set pricing table

Number of SW0251 increments	Number of AST sets configurable
1	1-20
2	21-40

Status	Order Code	Description	CLP	Distr. Disc.

Broadcast Features

The following features are introduced as of Release 23.

- Recorded Announcement Broadcast
- Music Broadcast

These features are priced independently of the overall system TN count and in increments of one connection with a system maximum of 9,999 connections. When provisioning Recorded Announcement Broadcast (RAN Broadcast) or Music Broadcast, the number of software "connections" ordered should be equal to the maximum number of people who can listen to the recorded announcement/music at any one time.

S ➤	SW0150A	Recorded Announcement Broadcast. Provides one software connection from a RAN source to incoming callers. Up to 48 callers can be connected to a single RAN source through 1 trunk port.	400.00	I
S ➤	SW0155A	Music Broadcast. Provides a software connection from a music source to incoming callers. Up to 64 callers can be connected to a single music source through 1 trunk port.	140.00	I

RAN Broadcast

RAN Broadcast Connections allow multiple callers to simultaneously listen to recorded announcements through a single trunk port via software. Each unit of SW0150A provides one RAN connection. Multiple RAN Connections are purchased by ordering multiple units of SW0150A. One RAN "connection" provides RAN services to one caller/listener.

RAN Broadcast pricing table

Number of Recorded Announcement Listeners	Number of RAN connection purchased
1	1
2	2
3	3
4	4
5	5
6	6
7	7
8	8
9	9
10+ (Note)	10+ (Note)
Note: Continues in increments of one, up to 9,999

Status	Order Code	Description	CLP	Distr. Disc.

Music Broadcast

Music Broadcast Connections allow multiple callers to simultaneously listen to music on-hold through a single trunk port via software. Each unit of SW0155A provides one music connection. Multiple music connections are purchased by ordering multiple units of SW0155A. One music "connection" provides music on-hold services to one caller/listener.

Broadcast features pricing table

2	2
3	3
4	4
5	5
6	6
7	7
8	8
9	9
10+ (Note)	10+ (Note)
Note: Continues in increments of one, up to 9,999.	

ISDN/BRI Features

ISDN BRI features prices are based on the number of Digital Subscriber Loops (DSLs) used in the system. A DSL is the software designation of a BRI physical connection that accommodates two B-channels.

BRI features are priced in increments of 50 DSLs, as the following table shows:

X11 ISDN BRI software: DSL pricing table

Number of DSLs	DSL Level
1-50	1
51-100	2
101-150	3
151-200	4

S ➤	SW0102A	Meridian 1 Packet Handler	∞	2,000.00	I

ACD/Message Processing Features

All ACD/Call Center and Message Processing feature prices are based on the number of ACD Agents in the system. An ACD Agent is any TN with a Directory Number (DN) designated as an ACD DN in Meridian 1 software. Meridian Mail ports also count as ACD Agents.

ACD/Call Center and Message Processing feature prices are in increments of 20 from 1 to 200 agents and increments of 100 above 200 agents, as follows:

X11 ACD/Message Processing software: ACD agent pricing table

Number of ACD Agents	Agent Level

Meridian Link Associated Station (AST) Features

Pricing for the Meridian Link Module Software (SW0251A) is based on the number of telephone sets that are to be controlled or monitored by a computer application connected to Meridian 1 via Meridian Link. Each such set must be configured with the "AST" feature. A set with this feature is known as an "Associated Station" or AST set.

Each increment of Meridian Link Module Software increases the number of ASTs that can be controlled or monitored by Meridian Link.

Note: When the maximum level of 18 increments is ordered, the AST limit is set equal to the system TN limit.

X11 software AST set pricing table

Number of SW0251 increments	Number of AST sets configurable

X11 Release 15-17 Software

X11 Releases 15 -17 software use a graduated pricing structure based on usage capacity. The base software package includes many standard features. Additional optional features are also available.

All base software pricing, as well as pricing for optional features, new releases, upgrades and capacity changes for X11 Release 15-17 users is based on system port (TN) levels. The base software package includes many standard features. Additional optional features are also available.

Features are priced in increments of 100 from 1 to 1000 TNs and increments of 500 above 1000 TNs, as the following table shows:

X11 Release 15-17 software: TN pricing table

Number of TNs	TN Level
1-100	1
101-200	2
201-300	3
301-400	4
401-500	5
501-600	6
601-700	7
701-800	8
801-900	9
901-1000	10
1001-1500	11
1501-2000	12
2001-2500	13
2500+	Note
Note: Increments of 500 TNs thereafter: Level + (TNs - 1000)/500 + 10	

Maximum charge levels do not apply to Meridian 1 Base Software. Features with a maximum charge level of one are one time charge additions, regardless of system size.

As Releases 15 and 16 are retired, feature additions and TN expansions will require updates to Release 17 or later. There is a special policy in force to assist Release 15 and 16 users in upgrading systems. Specifics on this policy and other information on upgrading a Release 15 or 16 system can be found in the General Section under "System/Software Orders and Upgrades."

X11 Release 23 hardware upgrade paths

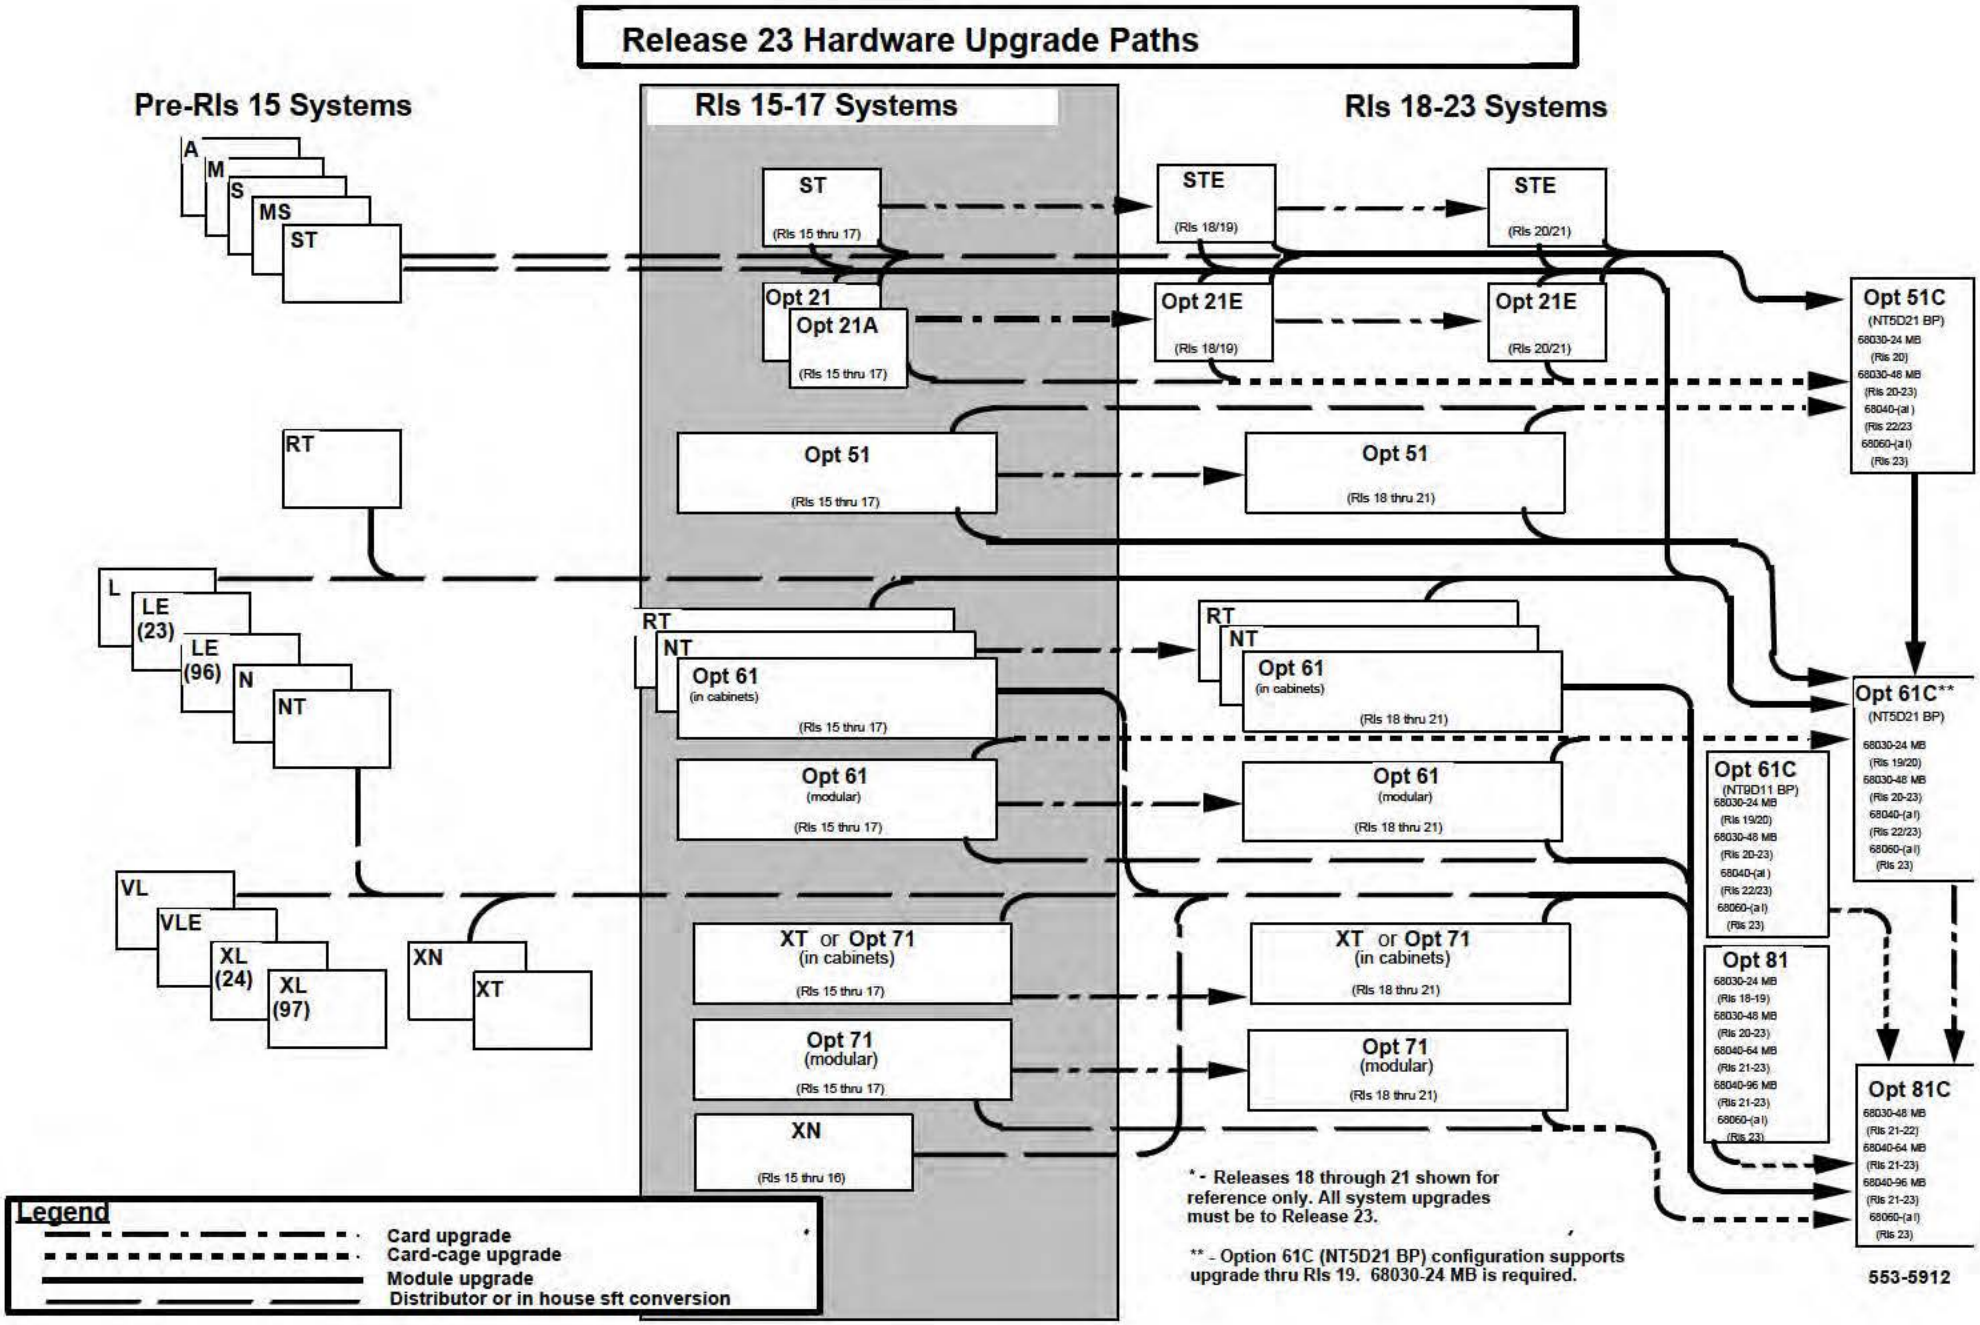
The chart that follows illustrates the Release 19 and 21 hardware upgrade paths for all SL-1 and Meridian 1 systems. Although the Release 19 and 21 upgrade paths have been simplified, there are still three paths available for Release 19 and 21 upgrades, the paths are as follows:

- Card
- Card Cage
- Module

Locate the type of system to be upgraded on the left side of the chart. The arrows show the upgrade paths available with the appropriate upgrade package order code(s).

For example, for a system type of SL-1 M, the upgrade paths point to the following:

- Option 51C (U9643A/D)
- Option 61C (U9639A/D)



Additional information can be found in the Reference Section in Book Three.

Note: This package includes hardware items commonly needed to perform the system upgrade. Some configurations may require additional items which are not included in these packages. Therefore, an engineering analysis of the existing system must be completed to ensure all hardware upgrade items have been identified and are available at the time of the upgrade installations.

Determining Appropriate Cable Lengths for Multi-Group Systems (Option 81 and 81C)

Cable length = (rounded to nearest foot)

(# of UEM's spanned left/right) x 36" +

(# of UEM's spanned up/down) x 18" +

(18" if within same column)

Migration Policies

Telephone Migration Credits

Under the terms of the Telephone Migration Policy, Nortel Networks offers incentives to migrate existing telephones sets by providing a 15% credit for M2000 telephones, M3000 telephones, or consoles. Please refer to the Qualifying Migrations Credit Table to identify which sets are eligible.

All replaced telephones must be returned to Nortel Networks to receive the credits. Telephone set credits are provided on a one-for-one basis with the number of sets returned, no supporting line card returns are required.

The telephone migration policy may be used only when the existing system is running current or active software. If the system is running retired software, it must be updated to a current or active software release to qualify for this telephone migration discount. Refer to the "Ordering Procedures" section of the Product Catalog for a listing of current software.

EPE to IPE Migration Credits

Under the terms of the EPE to IPE Migration Policy, Nortel Networks offers incentives to replace Enhanced Peripheral Equipment (EPE) with Intelligent Peripheral Equipment (IPE) by providing a 15% migration credit on all IPE purchases. All replaced EPE must be returned to Nortel to receive any discounts.

The EPE to IPE migration policy may be used only when the existing system is running current or active software. If the system is running retired software, it must be updated to a current or active software release to qualify for this EPE migration discount. Refer to the "Ordering Procedures" section of the Product Catalog for listing of current software.

> Note: Release 14 does not support IPE; therefore, does not qualify for these EPE to IPE migration credits.

For each EPE item returned, a credit will be provided towards a comparable quantity of IPE equipment. Due to the different capacities, the quantity of equipment discountable is approximately equal to the quantity returned, but not necessarily exact. Network card credits are provided on a one-for-one basis with the number of EPE loops returned. Line/trunk card credits are provided on a one-for-one basis with number of EPE ports returned. IPE module purchases require PE shelf/tier/module and appropriate buffer card returns on a one-for-one basis.

A worksheet provided at the end of this section can assist you in calculating the amount of allowable migration credits.

Ordering

The appropriate ordering codes must be used on the purchase order to obtain the special pricing. Failure to do so will result in Distributor being billed full Net Distributor Price (NDP) for the order. Credit will not be issued if order is placed incorrectly.

A list of expected equipment returns must be provided to Inside Sales at the time of order placement. See Telephone/EPE to IPE Product Return Form located at the end of the section.

All Migration pricing orders must include the system serial number of the existing system.

All products included on a PO utilizing this migration policy must be installed at a single customer location. Discounts are to be used only for equipment sold to end users, they cannot be used to purchase equipment for Distributor inventories.

Migration credits are applied at Gross Distributor Price (GDP). Volume Purchase Plan (VPP) discounts are applied after credits.

The Distributor purchase order must be received by the appropriate Nortel Inside Sales representative. The Telephone/EPE to IPE Product Return Form must accompany the PO and be sent to the following address:

Nortel Networks Inside Sales
2305 Mission College Blvd.
Santa Clara, CA 95054-1591

The Distributor cannot cancel or return any portion of the PO pertaining to the purchase requirements for migration credits. Doing so will result in billing the Distributor at standard Net Distributor Price (NDP). Distributors may not supply any portion of the program purchase requirements from their inventory or return Telephones or EPE from their inventory. Any trade-in equipment shortages will be considered a violation of the Terms and Conditions of this policy.

Shipment lead times on orders placed under this program may vary from standard shipment lead times.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Status	Order Code	Description	CLP	Distr. Disc.

Equipment Returns

The Telephone/EPE to IPE program requires that the participating Distributor return the replaced Meridian 1 and Meridian SL-1 hardware as specified in Telephone/EPE to IPE Product Return Form to Nortel within 60 days of shipment. Extensions may be requested by contacting Letty Terrazas at 408-495-5165.

Upon approval, a Return Authorization (RA) number must be obtained from Inside Sales and noted on the product return form.

Returned equipment must be packaged with an Telephone/EPE to IPE Product Return Form and be labeled with the proper Return Authorization number. See the section "Equipment Return Procedure," for complete instructions.

It is the Distributor's responsibility to ensure proper packaging of the replaced Meridian 1/Meridian SL-1 equipment. All returned equipment must be packaged adequately to prevent damage to the enclosed components. If the components are received at Nortel Networks damaged or otherwise non-reusable, the Distributor shall be billed full Net Distributor Price and will not receive the requested program discounts.

The replaced hardware must be returned to the following address:

Nortel Networks Repair and
Distribution Center (NRDC)
Attn: EPE to IPE Migration
917 Airpark Center
Nashville, TN 37217
1-800-321-2649

Nortel Networks will incur the normal and customary cost of shipping the returned equipment to Nashville. Nortel Networks will only pay the normal and customary cost of shipping the returned equipment. If the equipment pick up and shipment requires excessive effort, Distributor will be billed for any charges over the normal and customary cost.

All returned hardware becomes the property of Nortel Networks. All returned equipment must be in working order.

Returned equipment does not create any form of discount balance for future redemption, and discount eligibility cannot be transferred between customers.

Failure to return the replaced Telephones or EPE will result in the participating Distributor being billed full Net Distributor Price (NDP), for the Meridian 1 hardware ordered. Restocking charges will apply to returns not completed within 60 days of shipment.

Equipment Return Procedure Migration Policy

The following are the Equipment Return Procedures for the Migration Policies.

1. The completed Distributor Purchase Order is received in Inside Sales (Santa Clara) for processing.
2. Completed Telephone/EPE to IPE Product Return Form is received in Inside Sales (Santa Clara).
3. The Distributor order is verified by Inside Sales for migration eligibility.
4. Upon approval a Return Authorization (RA) number is assigned to the order and noted on the Telephone/EPE to IPE Product Return Form.
5. Inside Sales sends the completed Telephone/EPE to IPE Product Return Form to the appropriate Distributor purchasing agent.
6. When the equipment is properly packaged, labeled and ready for pick up, the Distributor contacts Nortel Networks providing pick up address, contact name and telephone number. For your convenience we have made available a toll free number, 1-800-321-2649, for use while the Migration policies are in effect. Upon hearing the voice announcement, depress 5 for Nashville Repair, then depress 5 for the Traffic Coordinator.

   Note: It is the Distributor's responsibility to ensure proper packaging of the replaced Meridian 1/Meridian SL-1 equipment. The Telephone/EPE to IPE Product Return Form must be included with the returned equipment. All returned equipment must be packaged adequately to prevent damage to the enclosed components. If the components are received at Nortel Networks damaged or otherwise non-reusable, the Distributor shall be billed full Net Distributor Price (NDP) and will not receive the requested program discounts.
7. Nortel Networks contacts a delivery service and makes the necessary arrangements for pick up and shipment of the Meridian 1/Meridian SL-1 equipment to the Repair and Return Center in Nashville. Nortel Networks will incur the normal and customary cost of shipping the returned equipment to Nashville.

   Note: Nortel Networks pays only the normal and customary cost of shipping the returned equipment. If the equipment pick up and shipment requires excessive effort, Distributor will be billed for any charges over the normal and customary cost.
8. Nortel Networks contacts the Distributor, relaying necessary shipping information and pick up date.

   Note: If the replaced Telephones or EPE is not returned within 60 days of shipment of the new Meridian 1 equipment, the Distributor will be billed full Net Distributor Price (NDP) and will not receive the requested migration credits. Equipment return extensions may be required by contacting Letty Terrazas at 408-495-5165.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Meridian 1 Message Processing - Applications

Message Processing - Applications

Message Processing products include the following:

- Meridian Mail Card Option, and the Modular Option EC 11 for the Option 11 PBX
- Modular Option EC for Meridian 1 Options 21 - 81
- Meridian Mail Modular GP for SL-100, DMS-100, DMS-10, AT&T, ROLM, PBXs, and AT&T Centrex
- Messenger
- CallPilot
- Message Services Module (MSM) for the SL-100, DMS-100 and AT&T Centrex
- Meridian IVR

Message Services Module (MSM)

The Message Services Module (MSM) is a large stand-alone voice messaging system with supernode packaging and components. It is fully redundant, NEBS- (Network Equipment Building Specification) compliant and Bellcore-Certified.

System Compatibility

This system was introduced beginning with Meridian Mail Release 9 software. The MSM system is compatible with the following switching systems:

- DMS 100
- SL-100
- AT&T 1AEss
- AT&T 5ESS (using a SMDI integration)
- AT&T System 75, 85, and Definity
- Rolm 8000, 9000, 9750, and 9751 (using Meridian Mail Connections integration)

Meridian Mail Upgrades/Expansions

Charges for Release Updates and Feature Additions

To determine the appropriate software update charge for a release update and/or feature addition, identify the applicable order codes and pricing. In addition, the SERV0019 software service transaction fee of $500 must be included. When ordering port and/or node expansions, the no charge Meridian Mail hardware service keycode SERV0020 must be ordered. The Meridian Mail Site Profile must be included in all orders.

Service Transaction Fees

Only one Meridian Mail software service transaction fee is applied per processed order. An order may include one or more of a requested feature, service or release update.

Meridian Mail software service transactions may include one or more of the following services:

Example of updates/feature additions/deletions

Service	Example
Release/Issue Update	Release 12 to Release 13
Feature Addition/Deletion	Adding "Networking"
Material Replacement	Worn or damaged tape

Examples of Meridian Mail Upgrades

Adding a New Feature

An end-user with a Meridian Mail Release 13 system wishes to purchase Networking software.

1. Choose the Networking Software (SWXXXXX)
2. Add the Software Service Transaction Fee
3. Calculate:

$ SWXXXX	Networking Software RTU Fee
(+) $SERV0019	Software Service Transaction Fee
$ YYYY	Total CLP

✓	Revision from Last Issue	§	New system sale only	>>	Available until stock depleted

Status	Order Code	Description	CLP	Distr. Disc.

Updating Release and Adding a New Feature

An end-user with a Meridian Mail Release 10 system wishes to purchase Release 13 and add the Networking software.

1. Choose the "Release 10 to 13" order code (NTXXXXXX)
2. Add the Networking Software (SWXXXXX)
3. Add the Software Service Transaction Fee
4. Calculate:

$ NTXXXXXX	Software/Hardware Upgrade Fee
(+)$ SWXXXXX	Networking Software RTU Fee
(+)$ SERV0019	Software Service Transaction Fee
$ YYYY	Total CLP

Expanding Ports

An end-user with a Meridian Mail Release 13 system wishes to purchase eight additional ports without any additional features.

1. Choose the eight-port Voice Processing Package (NTXXXXXX)
2. Add the Hardware Key Code Service
3. Calculate:

$ NTXXXXXX	8-port Voice Processing Package
(+) $SERV0020	Hardware Key Code Service
$ YYYY	Total CLP

Updating Release and Adding a New Feature

An end-user with a Meridian Mail Release 8 system wishes to purchase Release 12 and add Networking software.

1. Choose "FROM" Release 8 "TO" Release 12 order code (U72XX)
2. Calculate:

$ SWXXXX	Networking Software RTU Fee
(+)$ U72XX	Software Update Fee
(+)$SERV0019	Software Service Transaction Fee

Meridian Mail Factory Upgrade Service

In response to distributor requests for assistance with bringing new products to market, Nortel introduces a service solution for distributors to utilize when upgrading existing Meridian Mail customers. Meridian Mail systems are sophisticated products that require previous training and experience. Meridian Mail Factory Upgrade Services can help you upgrade your customers to the latest Meridian Mail release knowing that Nortel has partnered with you to make the upgrade successful.

Meridian Mail Upgrade Service

This program is designed to help you, the distributor, deliver service excellence and increase your customer satisfaction. You need to capture the current customer information on a site profile form, send it to our factory service engineer for scheduling, then send a copy of the sites Meridian Mail database on tape accompanied with a purchase order and site profile into Santa Clara. Upon receipt of the tape a factory-service engineer performs the release upgrade and/or functionality expansion on the software at the Santa Clara manufacturing facility. The tape containing the updated software is then returned to site personnel for installation at the end-user site. The factory-service engineer is available for any follow-up questions or concerns during the installation of updated tapes.

Note: Release-to-release upgrades are only made to the latest release of the Meridian Mail software. This upgrade service covers only the Meridian Mail software. The distributor still needs to handle any hardware upgrades and/or changes.

System Port Charge for Meridian Mail Upgrades

The Santa Clara manufacturing facility performs the Meridian Mail software release-to-release upgrade for customers. The following charges are based on the physical port count of the current Meridian Mail system used.

Order Code	Ports	CLP
SV000099	2-24	$2,000
SV000100	25-48	$4,000
SV000101	49-64	$6,000
SV000102	65-96	$8,000

✓	Revision from Last Issue	§	New system sale only	>>	Available until stock depleted

Meridian Mail Factory Upgrade Service

The Santa Clara manufacturing facility performs software functionality enhancements or modifications for the customer. Factory upgrade service includes the following expansions.

- Software expansion of nodes and ports
- Software expansion of storage and languages
- Features

The following table lists the order information for Meridian Mail Factory Upgrade Service.

Order code	Description	CLP
SV000098	Meridian Mail Factory Upgrade Service	$200 (Note)
Note 1: The $200 charge is per functionality or modification required, and is not to exceed $1,000 regardless of the required functionality additions or modifications. 0All changes are in addition to Right-to-Use (RTU) and software service transaction fees, etc.		

Example of Meridian Mail Factory Upgrade Service

Upgrading to a current Meridian Mail release with a node expansion and functionality addition.

An end user with a Meridian Mail Release 7 system wishes to upgrade to Release 13 and add the Networking feature as well as expand their system from three nodes to four nodes and currently they have 36 ports.

Order	Description	Amount	Purpose
SV000100	Meridian Mail 25-48 Upgrade Service Charge	$4,000.00	For 36 ports
SV000098	Meridian Functionality Service Fee	800.00	For the following items at $200.00 each: - networking - node expansion - upgrade (Rls 7 to Rls 8) - upgrade (Rls 8 to Rls 13)
	Total	$4,800.00	

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Status	Order Code	Description	CLP	Distr. Disc.

Configuration Rules for the MC Upgrades Tool

When the distributor is configuring a Meridian Mail Upgrade order, ask the distributor if they would like to purchase a Meridian Mail Factory Upgrade Service package.

If the customer is doing any of the following items: expansions, additions or software upgrades, use the calculations above to determine the Upgrade Service total.

For example, a customer wants to upgrade the following items:

- Upgrade from Release 5 to Release 13
- Add a node
- Expand the number of ports from eight to 12 ports

The upgrade is as follows:

Upgrade	Amount
Release 5 to Release 7	$200.00
Release 7 to Release 8	200.00
Release 8 to Release 13	200.00
Port expansion	200.00
Node expansion	200.00
SV000099 for eight ports	2,000.00
Total	$3,000.00

Meridian Mail Platform Migration

For detailed information on current migration programs, refer to your Meridian 1 Marketing Programs. A platform migration may be used to migrate between Meridian Mail hardware platforms due to increased capacity, ports/storage, or to take advantage of current software/hardware technology.

CallPilot

CallPilot Release 1.06

The order codes that appear in this section are unique to CallPilot Release 1.06. These codes should be used to order CallPilot 1.06 systems until CallPilot Release 1.07 codes are removed from controlled release. Please refer to Sales & Marketing Bulletin 1271-G Rev 1 for detailed ordering procedures using these codes.

Storage Expansion

The following table depicts the storage capacity options available on installed Modular Option ED, EC11, Modular Option, and Modular Option GP systems running Meridian Mail 11 software.

Meridian Mail 11 storage capacity

Volume storage level	Minimum disk drive	1 node hours	2 node (Note) hours	3 node hours	4 node hours	5 node hours
1	300 MB	11	26	30	45	60
2	300 MB	24	54	60	90	120
3	600 MB	36	84	90	120	180
4	600 MB	54	114	120	180	240
5	1.0 GB	100	200	200	300	400
6	2.0 GB	200	400	400	600	800
Note: The maximum capacity of the EC11 is two nodes, therefore 400 hours is maximum available storage.						

Expanded Storage Software

S ➤	SW7049	Meridian Mail Expanded Storage Software Level 1-2	7,500.00	D
S ➤	SW7054	Meridian Mail Expanded Storage Software Level 2-3	7,500.00	D
S ➤	SW7055	Meridian Mail Expanded Storage Software Level 3-4	7,500.00	D
S ➤	SW7056	Meridian Mail Expanded Storage Software Level 4-5	10,000.00	D
S ➤	SW7059	Meridian Mail Expanded Storage Software Level 5-6	10,000.00	D

SYMPOSIUM Integrated IVR Release 2.2

Integrated IVR Release 2.2 System Information

Integrated IVR Release 2.2 is the evolution of Nortel's Meridian IVR Release 2. Integrated IVR Release 2.2 is part of Nortel's SYMPOSIUM portfolio of products.

Integrated IVR Release 2.2 is a Year 2000 compliant product available only as an upgrade to Meridian IVR Release 1 and Meridian IVR Release 2 customers.

Upgrades from Meridian IVR Release 1 to Meridian IVR Release 2 are no longer possible.

The addition of features and/or capacity to existing Meridian IVR Release 2 systems is possible but new orders of Meridian IVR Release 2 are no longer possible.

Integrated IVR Release 2.2 continues to use the same advanced open platform (Application Processor or AP) that is currently used by the Meridian IVR Release 2 product. It also introduces a number of improvements to the platform including the addition of a CDROM drive, a higher capacity hard drive and an increase in the standard available on-board RAM.

Integrated IVR Release 2.2 supports the functionality currently offered by Meridian IVR Release 1 and Meridian IVR Release 2 systems. It is based on a new, Year 2000 compliant version of the SCO UNIX operating system. Its features include a wide variety of enhanced LAN and Host computer connectivity protocols, advanced fax capabilities, an enhanced Graphical User Interface (GUI) for even easier application development, multi-lingual voice prompt capabilities, a multi-lingual GUI, enhanced reporting and statistics, local or remote database access using Sybase, Informix, Ingres, or Oracle SQL databases and the capacity to support 96 ports on a single AP.

Meridian 1 and Meridian Mail Considerations for Integrated IVR Release 2.2

Meridian 1 X11 Hardware and Software

Generic X11 Release 14 or later software.

Bundled software features include:

- Hold in Queue for IVR, package 218 (optional) X11 Release 18 or later.
- ACCESS enable software on Meridian Mail if not already equipped.

Note: Hold in Queue for IVR is a "no charge" option, however, if not all chargeable prerequisites are on your system profile, this software option number 218 will remain as an IOU from Nortel Networks. CCR Release 2 and Meridian Mail Release 8 are prerequisites for this feature. Bundled only on system types Option 21-81.

Meridian Mail Hardware and Software

- Release 9.66 or later software, with ACCESS Enable Option for Meridian 1 Option 21-81.
- Release 9.66 or later software, with ACCESS Enable Option for Meridian 1 Option 11.
- Meridian Mail system equipped with RSM card (for Modular EC systems, equipped on the utility card).
- RSM cards are available as part of the Distributed Networking Kit Packages. Refer to the Meridian Mail Section for pricing and ordering information.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Status	Order Code	Description	CLP	Distr. Disc.

The following table summarizes the compatible Meridian Mail software releases.

			Meridian Mail					Access Links		
Meridian Mail Platform	Switch I/F	Max. Ports	MM 9	MM 9.2	MM 9.4	MM 9.5	MM 9.6	MM 10-12	MM 8-9	MM 10-12[1]	# of APS
8 Meg Card Option	AML/ CSL	12			x		x	x	1	2	1
Modular Option Classic	AML/ CSL	64							2		1
Modular Option Classic (with MMP40)	AML/ CSL	64				x	x	x	2	8	1
Shelf Option	AML/ CSL	24							1		1
Shelf Option/MMP40	AML/ CSL	24				x	x	x[2]	1	6[2]	1
Modular Option EC	AML/ CSL	64	x			x	x		2		1
Modular Option EC (with MMP40)	AML/ CSL	96				x	x	x	2	8	1
Modular Option GP	SMDI	64							2		1
Modular Option GP (with MMP40)	SMDI	64				x	x	x	2	8	1
Message Services Module	SMDI	192		X			x	x	4	8	2

Note 1: A maximum of 8 links are supported from a single application processor.

Note 2: Access link determines number of channels supported across link.

Note 3: The earliest release of Meridian Mail that is Year 2000 compliant is Release 9.66.

The following table describes the ACCESS link capacity limits for shared and dedicated modes. This table can be used to calculate the correct number of ACCESS links for your system.

For one ACCESS link (in the following mode):	Number of Applications (Channels) at 4,800 bps	Number of Applications (Channels) at 9,600 bps	Number of Applications (Channels) at 19,200 bps (MM10)	Number of Applications (Channels) at 38,400 bps (MM10)
Dedicated mode	18	38	76	96
Shared mode	8	18	38	96

[1] Speed of ACCESS Links will vary according to the number of links and number of Meridian Mail nodes.
[2] Meridian Mail 10 only. Meridian Mail 11 and 12 are not supported on the shelf option with MMP40 platform.

General Ordering Considerations for Integrated IVR Release 2.2

The purpose of this paragraph is to provide general ordering guidelines for Integrated IVR Release 2.2. Complete ordering information including ordering reles follow in the price book and should be observed when ordering Integrated IVR Release 2.2.

Integrated IVR Release 2.2 is only available as an upgrade from Meridian IVR Release 1 or Meridian IVR Release 2.

The first step in the ordering process is to upgrade the Meridian IVR Release 1 or Meridian IVR Release 2 system to Integrated IVR Release 2.2. There are three upgrade packages available and a few additional upgrade considerations to observe. The three upgrade packages are:

- NTV200AA / A0765550, Upgrade Package from Release 1.0 to Release 2.2
- NTV200BA / A0765551, Upgrade Package from a Release 2.08 Runtime System to a Release 2.2 Runtime System
- NTV200CA / A0765553, Upgrade Package from a Release 2.08 Development System to a Release 2.2 Development Development System

Note that all Release 1 systems are development systems.

The additional upgrade considerations to follow are:

Meridian IVR Release 2.08 systems that have the UPS and/or SNA host communications option must order the upgrade for that option:

NTV201AE / A0765561, SNA (3270/5250) Host Connectivity Upgrade from Release 2.08 to Release 2.2

NTV201AT / A0765581, UPS Software Upgrade from Release 2.08 to Release 2.2

Meridian IVR Release 1 systems that have the SNA host communications option must reorder that option separately from the upgrade package and as per the detailed ordering rules.

A Meridian IVR Release 1 or Release 2 system that has been upgraded to Integrated IVR Release 2.2 retains its original capacity and features. Customers can, at the time of the upgrade order or subsequently, expand the Integrated IVR Release 2.2 system by adding to it the following optional features and/or capacity:

- Voice Prompt/Database Editor (standard on development systems)
- Voice ports
- 3270 or 5250 SNA host communications over Token Ring or SDLC
- VT100 host communications over RS-232
- RDBMS connectivity (Oracle, Sybase, Informix or Ingres)
- Fax

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Status	Order Code	Description	CLP	Distr. Disc.

- Uninterruptible Power Supply (UPS)
- Audio Line Interface (ALI)
- LAN card (Ethernet or Token Ring)
- Memory (64MB RAM is standard)
- ACCESS Cable Kit

Note that the RDBMS server and client software versions that are supported versions that are supported under Integrated IVR Release 2.2 are different from the versions that are supported under Meridian IVR Release 2. Nortel does not resell the RDBMS software but Meridian IVR Release 2 customers connecting to one of the supported databases should plan on upgrading their RDBMS software when upgrading to Integrated IVR Release 2.2.

Nortel recommends that all customers invest in spare components for their Integrated IVR Release 2.2 system: Power supply and hard disk spares for the AP are highly recommended.

- NTV202AH / A0765598, 525W Power Supply Spare
- NTV202AW / A0765599, 4.5GB SCA UltraSCSI Hard Disk Spare

SYMPOSIUM Integrated IVR Release 2.2 Packages

Options Upgrade

The Host Communications and UPS upgrades are only applicable to Meridian IVR 2.0/I customers that are upgrading to Integrated IVR 2.2. They must be ordered only if the MIVR 2.0/I system had the SNA Host Communications and/or the UPS option.

Options

Voice Prompt/Database Editor

A keycode (P0843070) must also be ordered to activate the Voice Prompt/Database Editor feature. A keycode must be ordered if any of the items on a purchase order require a keycode for activation. Each order can have a maximum of one keycode.

The Voice Prompt/Database Editor feature is standard on development systems.

S ➤	NT3R28AA	Voice Prompt/Database Editor for Run-Time Systems Only	800.00	D

Voice Ports

For example, if a customer wants to upgrade a 16 ports Run Time System to a Development System, the following needs to be done:

✓	Revision from Last Issue	§	New system sale only	>>	Available until stock depleted
★	New product introduction	†	Additions & maintenance	➤	See reference book
⊗	Controlled release	#	Manufacture discontinued	Δ	Distr butor discount category only

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Status	Order Code	Description	CLP	Distr. Disc.

i) Purchase one NTV201AC IIVR 2.2 Runtime to Development Upgrade Base Package - 4 ports, which includes one:

NTV201AD IIVR 2.2 Runtime to Development Upgrade Expansion - 4 ports, for upgrading ports 1 to 4 of the system, together with the SCO Development license.

ii) Purchase three more NTV201AD IIVR 2.2 Runtime to Development Upgrade Expansion - 4 ports, for upgrading 3x4=12 ports for port numbers 5 to 16 of the system.

A keycode (P0843070) must also be ordered to activate the conversion to a Development System or expansion of a Development or Runtime System. A keycode must be ordered if any of the items on a purchase order require a keycode for activation. Each order can have a maximum of one keycode.

System maximum is 96 ports for Options 21-81 systems.

S † ➤	NTV201AA	IIVR 2.2 Voice Port Expansion - 4 ports - Development System	5,800.00	D
S † ➤	NTV201AB	IIVR 2.2 Voice Port Expansion - 4 ports - Runtime System	6,100.00	D
S † ➤	NTV201AC	IIVR 2.2 Runtime to Development Upgrade Base Package - 4 ports	2,000.00	D
S † ➤	NTV201AD	IIVR 2.2 Runtime to Development Upgrade Expansion - 4 ports	1,500.00	D

Host Communications
VT100

To order VT100 host communications for Integrated IVR Release 2.2, a customer must consider the system's configuration. If the system configuration already includes Digi's PC/Xem board, or if the total number of sessions does not exceed 7, then order:

NTV454VA/A0731788 Host Connectivity Software - VT100 - Base & 16 session

If the number of VT100 sessions required is greater than 7 and the system's configuration does not include Digi's PC/Xem board, then for a new order for VT100 host communications option, order:

NTV452VA/A0731782 Host Connectivity Hardware - Serial Adapter Base Kit (For VT100 Option)

NTV452WA/A0731783 Host Connectivity Hardware - Serial Adapter Expansion Kit (For VT100 Option)

NTV454VA/A0731788 Host Connectivity Software - VT100 - Base & 16 session

Else for an expansion order for VT100 host communications, order:

NTV452VA / A0731782 Host Connectivity Hardware - Serial Adapter Base Kit (For VT100 Option)

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

S ✓ ➤	NTV454VA	Host Connectivity Software - VT100 - 16 Session Base RTU	7,550.00	D

SNA

Each Integrated IVR Release 2.2 new order for SNA host communications consists of hardware, base software and 16 sessions. Customers can purchase additional sessions for SNA host communications. For example, to purchase 32 sessions of SNA3270 over SDLC, a customer would order one of:

NTV452SA/A0731780 SDLC Adapter Kit for SNA 3270/5250

NTV453AA/A0731784 Host Connectivity Software - SNA3270 - Base & 16 Session

NTV453SA/A0731786 Host Connectivity Software - SNA3270 - 16 Session RTU Expansion

To purchase subsequently a 32 session expansion for SNA3270, a customer would order two of:

NTV453SA/A0731786 Host Connectivity Software - SNA3270 - 16 Session RTU Expansion

NTV453SA/A0731786 Host Connectivity Software - SNA3270 - 16 Session RTU Expansion

S ➤	NTV452SA	Host Connectivity Hardware - SDLC Adapter Kit (For SNA3270 or SNA5250 Option)	1,650.00	H

Status	Order Code	Description	CLP	Distr. Disc.

RDBMS Connectivity

A keycode (P0843070) must also be ordered to activate the RDBMS connectivity A keycode must be ordered if any of the items on a purchase order require a keycode for activation. Each order can have a maximum of one keycode.

This software is used to support the database transactions between the IVR system and the SQL database. This software does not include the database. The customer must purchase their databases directly from the vendor.

S ➤	NTV456AA	Database Connectivity Software - INFORMIX - RTU	5,250.00	D
S ➤	NTV456BA	Database Connectivity Software - INGRES - RTU	5,250.00	D
S ➤	NTV456CA	Database Connectivity Software - ORACLE - RTU	5,250.00	D
S ➤	NTV456DA	Database Connectivity Software - SYBASE - RTU	5,250.00	D

Fax

The customer must provision the software license of the initial two ports and then additional single port expansions up to a maximum of 8 ports for the AP. For example, if a customer wants to have eight fax ports, he would select a NTV201AR/A0765579 IIVR 2.2 Fax Response Software Base Package - 2 ports

for the initial two ports and six of NTV201AS/A0765580 IIVR 2.2 Fax Response Software Expansion - 1 port for the additional six port's software license.

The fax hardware comes in increments of four ports which include a 4-port fax board and a RJ-11 cable In the above example, the customer has purchased the software license of eight fax ports. To have the hardware to support eight ports, two of: NTV201AQ/A0765578 IIVR 2.2 Fax Response Hardware - 4 ports have to be purchased.

A keycode (P0843070) must also be ordered to activate the number of fax ports. A keycode must be ordered if any of the items on a purchase order require a keycode for activation. Each order can have a maximum of one keycode.

S † ➤	NTV201AQ	IIVR 2.2 Fax Response Hardware - 4 ports	4,500.00	H

Meridian MAX Release 3 or 4			NTJH15CA NTJH01CA	NTJH15CA NTJH01CA		
ACD-MAX Release 3 or 4					NTJH15AA/ NTJH15BA NTJH01BA Note 4	
ACD-D All Releases						NTJH15AA/ NTJH15BA NTJH01AA Note 4

Note 1: MAX 9 software can operate on a MAX-SNN platform. However, if an increase in capacity or performance is required, order NTJH15DA to upgrade a MAX-SNN platform to MAX-SNNE. To order only MAX 9 software for a MAX-SNN platform, see the Upgrading to a Meridian MAX-SNN Release 9 System table.

Note 2: Order either package NTJH12BA (Fundamental), NTJH12CA (Enhanced), or NTJH12DA (Virtual) to migrate from MAX 9 software on an IPE/IPEE platform to the same software level (Fundamental, Enhanced, or Virtual) on an SNNE platform. Use existing Meridian MAX Release 9 Operating System and Application tapes; only a keycode for use with the MAX-SNNE platform will be supplied.

Note 3: This upgrade also requires a software migration package. Order either NTJH12BA (Fundamental), NTJH12CA (Enhanced), or NTJH12DA (Virtual) to migrate from MAX software on the IPE/IPEE platform to the same software level (Fundamental, Enhanced, or Virtual) on an SNNE platform. Although two software packages are ordered, only a single keycode for use with the MAX-SNNE platform will be supplied with new Meridian MAX Release 9 Operating System and Application tapes.

Note 4: No preservation or conversion of customer data is possible with this upgrade. Data collection must be recommenced from scratch once this upgrade is complete.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Upgrading to a Meridian MAX-IPE Release 9 system

	Upgrading from Hardware Platform					
Upgrading from Software Release	**MAX-SNN and MAX-SNNE**	**MAX-IPE**	**MAX-SEE and Option 1, 2 Single AM's**	**MAX Option 3, 4 Dual AM's**	**HP Vectra (Single or Dual Tower)**	**PDP-11**
Meridian MAX Release 9	Not Supported					
Meridian MAX Release 8	Not Supported	NTJH02FA Note 1				
Meridian MAX Release 7	Not Supported	NTJH02EA Note 1				
Meridian MAX Release 6	Not Supported	NTJH02DA Note 1	Not Supported Note 2			
Meridian MAX Release 5	Not Supported	NTJH02DA Note 1	Not Supported Note 2			
Meridian MAX Release 4.62		NTJH02DA Note 1				
Meridian MAX Release 3 or 4			Not Supported Note 2	Not Supported Note 3		
ACD-MAX Release 3 or 4					Not Supported Note 2	
ACD-D All Releases						Not Supported Note 2

Note 1: Use existing IPE platform for this upgrade. Database size after upgrade depends upon the size of the hard disk drive in the existing IPE platform. Both a 1-GByte (or larger) hard disk drive and a 600-MByte cassette tape drive are required to support a 250-MByte database. Disk and tape drives smaller than this support 90-MByte databases.

-Meridian MAX-IPE modules with part numbers A0617009 or A0617010 that were shipped new from the factory before December 1995, contain 240-MByte hard disk drives and therefore, can only support 90-MByte databases. New modules with these part numbers that were shipped after November 1995, support 250-MByte databases.

-All Meridian MAX-IPE modules with part numbers NT1R02AA or NT1R02BA support only 90-MByte databases.

-If the existing IPE platform supports only a 90-MByte database and a 250-MByte database is desired, an upgrade to a Meridian MAX-IPEE is required. See the "Upgrading to a Meridian MAX-IPEE Release 9 System" table.

Note 2: Upgrade from this system to MAX-IPE not supported. Instead, upgrade to Meridian MAX-IPEE Release 9 system. See the "Upgrading to a Meridian MAX-IPEE Release 9 System" table.

Note 3: Upgrade from this system to MAX-IPE not supported. Instead, upgrade to Meridian MAX-SNNE Release 9 system. See the "Upgrading to a Meridian MAX-SNNE Release 9 System" table.

Upgrading to a Meridian MAX-IPEE Release 9 system

	Upgrading for Hardware Platform					
Upgrading from Software Release	**MAX-SNN and MAX-SNNE**	**MAX-IPE and MAX-IPEE**	**MAX-SEE and MAX Option 1, 2 Single AM's**	**MAX Option 3, 4 Dual AM's**	**HP Vectra (Single or Dual Tower)**	**PDP-11**
Meridian MAX Release 9	Not Supported	NTJH93EA/ NTJH93FA Notes 1, 2				
Meridian MAX Release 8	Not Supported	NTJH93EA/ NTJH93FA NTJH02FA Note 2				
Meridian MAX Release 7	Not Supported	NTJH93EA/ NTJH93FA NTJH02EA Note 2				
Meridian MAX Release 6	Not Supported	NTJH93EA/ NTJH93FA NTJH02DA Note 2	NTJH17AA/ NTJH17BA NTJH02DA			
Meridian MAX Release 5	Not Supported	NTJH93EA/ NTJH93FA NTJH02DA Note 2	NTJH17AA/ NTJH17BA NTJH02DA			
Meridian MAX Release 4.62		NTJH93EA/ NTJH93FA NTJH02DA Note 2				
Meridian MAX Release 3 or 4			NTJH17AA/ NTJH17BA NTJH02CA	Not Supported Note 3		
ACD-MAX Release 3 or 4					NTJH17AA/ NTJH17BA NTJH02BA Note 4	
ACD-D All Releases						NTJH17AA/ NTJH17BA NTJH02AA Note 5

Note 1: Use existing Meridian MAX Release 9 Operating System and Application tapes, and keycode when upgrading hardware platform from MAX-IPE to MAX-IPEE. Requires an Installation Upgrade.

Note 2: The MAX-IPEE platform (A0667468 or A0667469) supports a 250-MByte database. However, it may not be necessary to order a MAX-IPEE hardware upgrade (NTJH93EA or NTJH93FA) if the existing MAX-IPE supports a 250-MByte database.-Meridian MAX-IPE modules with part numbers A0617009 or A0617010 that were shipped new from the factory before December 1995, contain 240-MByte hard disk drives and therefore, can only support 90-MByte databases. New modules with these part numbers that were shipped after November 1995, will support 250-MByte databases and therefore, a MAX-IPEE hardware upgrade is not required.-All Meridian MAX-IPE modules with part numbers NT1R02AA or NT1R02BA will only support 90-MByte databases; therefore, a MAX-IPEE hardware upgrade is required.

Note 3: Dual Module MAX Option 3 or 4 systems can only be upgraded to MAX-SNNE platforms. See "Upgrading to a Meridian MAX-SNNE Release 9 System" table.

Note 4: This upgrade involves a two-step database conversion process: First, the ACD-MAX database is converted to MAX 6 (on the IPEE platform) and then the database is converted from MAX 6 to MAX 9. A reusable data conversion kit (AS7506) is required to load the ACD-MAX database from the DC150 tape cartridge into the MAX-IPEE.

Note 5: No preservation or conversion of customer data is poss ble with this upgrade. Data collection must be recommenced from scratch once this upgrade is completed.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Meridian Link and CCR Co-Residency

Software

Base Software

Meridian Link, Customer Controlled Routing (CCR) and Meridian Link & CCR Co-Residency are being retired due to a number of key hardware components going End of Life. The details for the announcements are as follows:

New Systems:

- All new sales of Meridian Link 5C, CCR 3C, and Co-Resident 6.42 (Meridian Link 5C & CCR 3C) will cease as of July 31st 2000.
- Hardware packages for the IPEE Platform will cease as of July 31st, 2000.

Hardware and Software Upgrades:

- Hardware upgrades to Meridian Link 5C, CCR 3C, and Co-Residency 6.42 (Meridian Link 5C & CCR 3C) will not be available after July 31st, 2000.
- Software upgrades to Meridian Link 5C and CCR 3C will be available until March 2001.

<u>New Sales after Retirement Date</u>:

Note 1: For customers looking for a Meridian Link and CCR call center

Ordering Procedures

Follow these procedures when ordering Meridian 1 sales collateral from the Nortel Networks Sales Collateral Catalog.

1. Use the Sales Collateral Order Form when placing orders.
2. If you are a Distributor, include a hard copy of a purchase order.
3. If you want to mail your order, please send the complete form with your purchase order to the following address:

   Nortel Networks

   Attn: Inside Sales Represenative

   200 Athens Way

   Nashville, TN 37228-1397

4. If you would like to fax your order, dial 1-615-734-5898, then choose appropriate menu items. If you have questions about your order, call customer service at 1-800-321-2649 and choose appropriate menu items.

   Note: All brochures are packaged in units of 25, unless otherwise indicated.

Sales Collateral Order Form

MERIDIAN 1 - Meridian Call Center

Brochures

Note: All brochures in packages of 25 unless otherwise noted.

P0724136
Call Center Business Planning Guide and Tools
6.00/EA
The Call Center Business Planning Guide is a completely updated, 100-page workbook designed to help current and potential customers understand the call center technology available today. In a step-by-step manner, this guide helps customers identify areas their call center that can be improved, and define what technology should be applied while cost-justifying the solution. While the guide is very useful for customers, it is also an excellent tool for distributors. Cost justification and return-on-investment tools in the guide are also included on Mac and DOS 3.5-inch diskettes. What if scenarios can be easily run to determine the financial benefit and payback length of implementing any of Nortel (Northern Telecom) Call Center products. (Microsoft Excel 4.0 is required to run these tools.) (July, 1994).

P0739833
Meridian Call Center Networking Brochure (NAC/NACD)
.60/PK
Two products are covered in this brochure, which highlights the cost efficiencies of networking multiple call center locations: Network ACD (NACD), which allows multiple ACDs to be networked, and Network Administration Center (NAC) which enables management of networked ACDs. (July, 1993). Minimum order quantity is 25; please order in multiples of 25.

P0739834
Meridian Link Brochure
1.19/PK
This brochure introduces customers to Meridian Link, Nortel's phone-to-computer interface for Meridian 1. It describes how Meridian Link can help your customers improve service, reduce operating costs and increase revenue. There are five inserts available for this brochure: four on the connecting to various computing environments (Hewlett-Packard, Digital Equipment Corporation, IBM and Tandem) and one on the Business Affiliate Program. (Updated June, 1995). Minimum order quantity is 25; please order in multiples of 25.

P0739836
NT/HP Alliance Brochure
.66/PK
This brochure explains how Meridian Link works with Hewlett-Packard computers and includes technical specifications. This is an insert to the Meridian Link brochure (P0739834). (July, 1993). Minimum order quantity is 25; please order in multiples of 25.

P0739838
NT/IBM Alliance Brochure
.66/PK
This brochure explains how Meridian Link works with IBM computers and includes technical specifications. This is an insert to the Meridian Link brochure (P0739834). (Updated July,1996). Minimum order quantity is 25; please order in multiples of 25.

P0739839
NT/Tandem Alliance Brochure
.66/PK
This brochure explains how Meridian Link works with Tandem computers and includes technical specifications. This is an insert to the Meridian Link brochure (P0739834). (July, 1993). Minimum order quantity is 25; please order in multiples of 25.

P0744840
Business Affiliates Brochure
.20/PK
This insert to the Meridian Link brochure (P0739834) describes the Business Affiliate program and what it has to offer customers considering computer-to-telephone integration. This program provides application software and application software developers for Meridian Link solutions. (July, 1993). Minimum order quantity is 25; please order in multiples of 25.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Status	Order Code	Description	CLP	Distr. Disc.

P0803269
Meridian Call Center Executive Overhead Presentation
150.00/EA
This high-level, overhead presentation is designed to be given to executives, covering business issues addressed by the Meridian Call Center portfolio. Many full-color illustrations. Not available in soft copy.

P0815255
Meridian Call Center Capabilities Guide
1.40/PK
This multi-colored, five-panel brochure provides a quick reference to the call center capabilities, the products and their features. (Updated August, 1995). Minimum order quantity is 25; please order in multiples of 25.

P0817917
Meridian 1 ACD Feature Document - Release 21
9.25/EA
This literature item provides a comprehensive description of Meridian 1 ACD package A, B, C and Meridian MAX features and Meridian MAX reports, as well as overviews of MAXcaster, NAC Networking and CCR features. (August, 1995) (Replaces P0739602).

Customer Testimonials

P0749025
Customer Profile: The Toronto Star
.37/PK
&quotA Step Ahead in Customer Service" The Toronto Star is Canada’s largest daily newspaper, with a weekday circulation of over 500,000 and a Saturday circulation of 800,000. This profile details the results of Brock Telecom developing applications that provide new services for subscribers, and provide an edge over the Toronto Star’s competition. (February, 1994). Minimum order quantity is 25; please order in multiples of 25.

P0807245
1995 TeleProfessional Reprint: Bringing Technologies Together for Maximum Call Center Performance
1.20/PK
This 16-page insert to the March issue of TeleProfessional focuses on bringing various technologies together to solve various business problems, and deliver the ultimate in convenience for callers. This issue contains 5 customer success stories across industries: Distance Learning, Disaster Recovery, Utilities, Banking and Retail. All call center technologies are briefly discussed, including future direction. (March, 1995). Minimum order quantity is 25; please order in multiples of 25.

P0808873
Call Center Journal: Available in all Sizes
.80/PK
This four-color, six-panel, 8.5 x 11-inch issue discusses how Meridian Call Center technology is solving problems - and delivering a competitive difference - regardless of company size. (August, 1995). Minimum order quantity is 25; please order in multiples of 25.

P0808874
Call Center Journal: Making the Perfect Match
.80/PK
This four-color, six-panel, 8.5 x 11-inch issue discusses how Meridian Call Center technology is solving problems - and delivering a competitive difference - regardless of company size. (August, 1995). Minimum order quantity is 25; please order in multiples of 25.

43.75/EA
This comprehensive course consists of video and workbook, and can be taken at home at your convenience or facilitator-given. The course walks you through start to finish: identifying a customer's business problems, reaching the right contacts - and understanding their mindset, designing the solution - the change in business process - that will solve the problems, and positioning and cost-justifying the solution. Kit also contains the Call Center Business Planning Guide complete with cost justification tools on disk (see listing for full description), sample RFP, presentations and call center product brochures. (1995).

A0622715
Winning With Application Sales: Meridian Call Center Sales Training Kit (without video)
35.50/EA
The same kit as A0618446, but without video for participants of a facilitator-given course. (1995).

Videos

P0746277
Meridian Messaging Education Solutions Brief
1.00/PK
This two-page, four-color flyer describes applications of Meridian Messaging in an educational setting. It includes a chart that visually represents information flow. Minimum order quantity is 25; please order in multiples of 25.

P0746278
Meridian Messaging Banking Solutions Brief
1.00/PK
This two-page, four-color flyer describes applications of Meridian Messaging in a financial institution. It includes a chart that visually represents information flow. Minimum order quantity is 25; please order in multiples of 25.

P0814188
Protecting Your Voice Mail System Brochure
.84/PK
This 8.5 x 4-inch, four-color brochure highlights the importance of protecting an organization’s voice mail system. The material covers some suggestions on how to protect the system against fraudulent long-distance charges, &quothackers," corporate espionage and malicious system intrusions. Minimum order quantity is 25; please order in multiples of 25.

P0843060
Messenger 2.0 Product Sheet
No charge/PK
This 8.5 x 11-inch, full-color, two-page flyer discusses Messenger 2.0, a Meridian Multimedia Messaging product that allows the user to prioritize, compose, view, print, return and forward all messages in a single window on his or her PC. Several features that enable quicker customer response and save the user time are listed, along with various installation, system and user requirements.

P0873149
Meridian Mail Upgrades Brochure
3.32/PK
This 9 x 11.5-inch, full-color, die-cut brochure outlines the advantages of Meridian Mail Release 11, including Year 2000 compatibility, increased site capacity, toll fraud prevention, time-saving administrative features and other capabilities. It also lists all of the features since Release 7 and discusses the major advantages of each release, emphasizing the need to upgrade. Minimum order quantity is 25; please order in multiples of 25.

Guides/Handbooks

P0702779
Meridian Mail Voice Menus Applications Guide
40.00/PK
This 8.5 x 11-inch, 32-page guide serves as an idea book for Voice Menu applications as well as documentation on how to create and use Voice Menus.

P0748232
Meridian Message Processing Feature Guide
8.00/EA
This 5 x 7-inch, full-color guide contains a list of Meridian Messaging features, describing each briefly.

P0843987
Meridian MultiMedia Messaging Sales Guide (Shrinkwrapped)
21.51/EA
This 8.5 x 11-inch, shrinkwrapped, and tabbed guide contains a complete sales guide covering vertical markets, competition, and applications for Meridian Multimedia Messaging products including Meridian Mail and Meridian IVR. A sample RFP and overhead presentation information are included. Macintosh- and DOS-formatted diskettes also provide product presentations and a cost justification tool.

Demo Disks

P0821363
Messenger 2.0 Interactive Demo Disks (Macintosh)
4.50/EA
These two Macintosh-formatted floppy diskettes contain interactive demonstrations allowing users to view and try the voice, fax and e-mail capabilities of Messenger 2.0. The diskette has Messenger 2.0 testimonials and applications showing Messenger 2.0 in use. It also has built-in presentations for all the voice, fax and e-mail capabilities of Messenger 2.0.

Videos

P0745957
Meridian Mail: The Electronic Front Door for Business Video
10.00/EA
This VHS tape is 12 minutes. It describes Meridian Mail features and their uses in different business environments. The video contains customer testimonials and application stories.

P0819975
Meridian MultiMedia Messaging Overview Video
2.50/EA
This VHS tape is 13 minutes, 42 seconds. The video highlights the capabilities of Nortel's Meridian Multimedia Messaging portfolio. It shows how users can gain control over today's increasingly complex messaging environment through the use of Meridian Mail, Meridian Mail Reporter, SYMPOSIUM Messenger and SYMPOSIUM Assistant.

CD-ROM

P0821361
Messenger 2.0 Interactive CD-ROM
4.69/EA
This interactive, multiformatted CD-ROM for Windows and Macintosh platforms allows users to view and try the voice, fax and e-mail capabilities of Messenger 2.0. The CD-ROM has Messenger customer testimonials and applications showing Messenger in use. It also includes built-in presentations for all the voice, fax and e-mail capabilities of Messenger; discusses the Messaging product portfolio; and features a video showing the past, present and future of Nortel.

Miscellaneous

P0744752
Nortel Promotional Funds Handbook
20.00/EA
Using this handbook, salespeople can generate ideas about the types of promotions-including advertising, direct mail and public relations-they can implement to increase Meridian 1, Norstar, terminals and VISIT sales. The guide gives information about how to access Nortel promotional funds.

P0844587
Quick Reference Guide - Black Binder
27.00/EA
This guide contains all updated product sections in a deluxe black vinyl binder with 19 black tab indexes. (Replaces P0802296).

P0844588
Update to Black Quick Reference Guide Binder
9.50/EA
This update to the Quick Reference Guide contains all updated product sections with one new black tab indexes-GALILEO. (Replaces P0802297).

P0844589
White Telecom Professional QRG Binder
15.50/EA
This binder contains all updated product sections in a white, vinyl binder with 19 white tab indexes. This Quick Reference Guide (QRG) is useful as a reference tool for telecom mangers or salespeople. (Replaces P0802298 - Redesigned for 1996).

UDS V.3225 Synchronous Modem		Meridian IVR	W1

Notes:
- One NTND91AB RS232 Straight Cable is needed for each UDS Modem. If Meridian IVR requires an asynchronous connection to a remote host, then a customer-supplied asynchronous modem should be used.
- This modem is required only for IVR systems where SNA/SDLC or X.25 synchronous host communications is used and the host being accessed is not local to the IVR system. In these situations, a modem is required to access the host or network via public telephone lines or leased lines. If there is a direct connection to the host, then a modem is not needed. If there are multiple remote hosts connected to the IVR system, then each host connection will require a modem.

MVME332XTS 8-Channel Asynchronous I/O Card	21; 21A; 21E; 51; 61; 61C; 71; 81; NT; RT; ST; STE; XT	Meridian IVR; Meridian MAX	W1

Notes:

- Each 8-Channel Asynchronous Serial I/O Board requires three (3) VME Multi-port cables (NT8D96BE(A0409374)).
- This card can be provisioned to provide RS232/422 connectivity to a host computer. It provides a maximum of eight (8) serial connections which can be used for a variety of purposes, including host connection. Each 8-Channel Asynchronous Serial I/O Board requires an associated NT6D51AA (A0387982) transition card. It provides three (3) DB-25 connections each of which can be attached to a multi-port cable to carry a total of eight (8) individual RS232 connections to different devices.
- This card is supplied with all development systems. On these systems, the serial ACCESS link from the Meridian Mail system may use one of the ports on the 8-Channel Asynchronous Serial I/O Board or it may use one of the serial ports on the 68040 card. This is a software configurable option. The default configuration is for the ACCESS link to be connected to the 8-Channel Asynchronous Serial I/O Board on developer systems, and connected to the 68040 card on run-time systems. Use of the serial I/O board is recommended for larger IVR systems with large numbers of ports used for IVR. Also, on development systems, the serial connection for the Meridian Mail VT420 system console may be cabled to the 8-Channel Asynchronous Serial I/O Board to allow the display of the Meridian Mail console as a window on the X-terminal. This will only be possible on development systems since only these systems have X-terminals. If this configuration is desired, then a modem eliminator (A0378652) is needed to interface the RS232 straight cable from the Meridian Mail with a connection to the multi-port cable.
- This card also provides a serial port for a printer connection on development systems. Development systems may be shipped with an optional LaserJet printer. While this printer may be connected to the 68040 card, the default configuration will have it connected to port 12 on the 8-Channel Asynchronous Serial I/O Board.
- The MVME332XTS is form, fit and function compatible with the discontinued MVME332XT.

Replacement Battery (For NTAK75AA/AB)	11		W1

Notes:

- The original replacement batteries were provided in kits consisting of four (4) batteries. Due to weight constraints the batteries will now be supplied as individual units. Therefore, to obtain a complete set of replacement batteries it will be necessary to order a quantity of four (4) A0620100 batteries.

MRS Tower/Rack Disk Drive (1.05GB)		Open IVR R2	W1

Notes:

- These disks do not have operating system software installed on them. This is the reason for the difference in the number of storage hours between the base system disk drives and these optional drives. The MRS/Tower and MRS/Rack can have any combination of disks up to a maximum of three. The base system includes one hard disk.
- The 1.05GB drive can store approximately 96 hours of voice storage at a sampling rate of 24 kbs.

Option 81/81C Network Group Assembly AC	81; 81C		W1

Notes:

- This package is for customers wishing to add a network group and utilize an Intergroup Switch Fabric (either QPC412 IGS cards or NT5D30 DIGS cards). Customers who utilize the fiber network fabric (NTRB33 FIJI cards) must order NTHY20AC or NTHY24AC to add an additional network group.
- Network, Conference and Tone & Digit cards must be ordered as separate items.
- Each group requires the addition of four NT8D76 IGS to IGM cables and four NTND14 CNI to 3PE cables, of appropriate length. Appropriate Option 81 Network Cable Packages (AS1040-AS1043) may be ordered if default module positioning is used.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-to-side must be determined and ordered separately.
- Either CNI-2 Port (NT6D65) or CNI-3 Port (NTRB34) cards can be used to support expansion of systems with Motorola commercial processors. The maximum number of network groups supported on systems with IGS (QPC412) or DIGS (NT5D30) cards is five.
- Systems with Call Processor PII based processors in the Core/Network Modules must use NT4N65 CNI cards.
- NTRB34 (CNI-3 port cards) may be used on systems running X11 Release 24 (or earlier) but only the first two ports on the card can be provisioned.
- X11 Release 25 software is required in order to provision the third port on the CNI-3 (NTRB34) card, for either IGS or fiber network fabric configurations.

Meridian Mail 2GB Disk Shadowing Voice Node Package AC		Meridian Mail Modular Option	W1

Notes:

- In voice nodes, if the drive being shadowed is an NT6D47AA (older version of 300MB drive not supported with disk shadowing), then a U7207 Meridian Mail Modular Option Disk Drive Upgrade package will need to be ordered to replace the NT6D47AA.
- The Disk Shadowing Option is not supported on 600MB drives (either as the shadowed or shadowing drive). In voice nodes, if the drive being shadowed is an NT6D48AA 600MB Disk Drive, then a U7207 Meridian Mail Modular Option Disk Drive Upgrade package will need to be ordered to replace the NT6D48AA.
- This package shadows voice nodes 2-5. Order one (1) package for each shadowed voice node. If any of the voice nodes are shadowed, the prime (1st) node must also be shadowed requiring package NT6D48GA.

HVS Hardware Package		Meridian Mail Card Option	W1

Notes:

- Meridian Mail Card Option Networking and Meridian Mail HVS require configuration engineering.
- When Networking is equipped with HVS it applies only to staff mailboxes.
- Both hardware and software are required for Meridian Mail Card Option HVS. A VT420 compatible terminal such as the AS7011 DEC Terminal Package must be purchased separately.
- Meridian Mail Card Option Network Message Services and Meridian Mail Card Option HVS are mutually exclusive on pre-Meridian Mail 11 systems.

MTE Release 5 Software (Single User) for DOS	11; 11C; 11E; 21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX R5,6	S3

Notes:

- Provides quantity of one (1) MTE software for installation on a PC. Software is supplied on high density diskettes in the 3.5 or 5.25 inch format.
- Can be used in lieu of Reflections 4+.
- Is required on each PC connected to the Meridian MAX via LAN Connectivity.
- Installation of SW0074A is a prerequisite.
- Meridian MAX Release 6 requires MTE Version 5.31 or higher.
- MTE Release 5 software requires the following: MAX 5.27 or later software on the MAX Module, DOS 5.0 or later operating system on the supervisors PC. The MAX Module must be equipped with the Meridian MAX MTE one-time Enable Fee (SW0074A). For use within a LAN environment, very specific requirements must be met. Please refer to the MAX 5, 6, or 7 NTPs for details of LAN connectivity requirements. These include: PC/TCP Release 3.0 or 2.X LAN software for DOS must be installed on the supervisors PC, the MAX Module must also be equipped with the Meridian MAX LAN one-time Connectivity Fee (SW0072A) one per system) and the Meridian MAX LAN Connectivity Software (SW0073A, one per LAN-based supervisor workstation.
- Required on each PC connected to the Meridian MAX via LAN Connectivity.
- Software is supplied on both 3-1/2 and 5-1/4 inch floppy disks.
- MTE Release 5 software requires the following: FTP Software Inc. PC/TCP kernel for DOS 2.05 or higher, an ODI,NDIS or Packet Driver compatible Ethernet LAN card or MS-DOS version 5 or higher, for Meridian MAX Release 6 or earlier, the MAX Module must be equipped with Meridian MAX MTE one-time Enable Fee (SW0074A), for Meridian MAX Release 7, the MAX module must be equipped with "Enhanced" level software, or equivalent upgrade from earlier systems, for use within a LAN environment, the MAX Module operating at Release 6 or earlier must be equipped with the Meridian MAX LAN one-time Connectivity Fee (SW0072A) and the Meridian MAX LAN Connectivity Software (one per LAN-based supervisor workstation, SW0073A), for MAX 7 systems, the MAX module must be equipped with "Enhanced" level software, or equivalent upgrade from earlier systems.
- Reference the MAX 5 Ordering Guide for third party ordering details.
- The NT1R75AA is the DOS Version of Meridian Terminal Emulator (MTE). If you require MTE which is Windows compatible, you must substitute the code NT1R75BA when you place your order. The price for the NTR75BA (Window version) is the same as for the NT1R75AA (DOS version).
- The Meridian 1 Serial number must be provided when ordering this code.

OIVR 2 x Hardware - 12-Port Loopstart Voice Port Assembly		Open IVR R2	W1

Notes:
- This package is compatible with OPEN IVR 2.01 and 2.5 MRSs and MRS/APs, including those upgraded to OPEN IVR 4.0.
- Compatible with OPEN IVR 2.X hardware running OPEN IVR 2.X software or OPEN IVR 4.0 software.
- Network Interfaces (i.e. Loopstart, T1, E1) cannot be mixed within a single MRS/AP, MRS Tower, and MRS Rack system.
- This assembly can be used to expand the MRS/AP, MRS Tower, or MRS Rack Base Runtime or Development System (12 ports loopstart), e.g. NT3R11AA and NT3R10AA. The maximum capacity for a Runtime MRS/AP System is 36 ports loopstart. The maximum capacity for a MRS/AP Development System is 24 ports loopstart.
- This assembly cannot be added to an MRS/AP, MRS Tower or MRS Rack system containing the 4-port loopstart voice port assembly.
- The IVR ID number must be provided when ordering this code.

Description	System Compatibility	Product compatibility	W/S
OIVR 2 x Hardware - Voice and Data Storage (1GB) for MRS/AP or AP		Open IVR R2	W1

Notes:

- The 1GB drive can store approximately 96 hours of voice storage at a sampling rate of 24 kbs. These disks do not have operating system software installed on them. This is the reason for the difference in storage between the base system disk drives and these optional drives. The MRS/AP can have one additional disk drive in the system. The MRS/AP can have a maximum of two disks.
- Compatible only with OPEN IVR 2.X hardware running OPEN IVR 2.X software.
- This package is used only for disk storage expansion and sparing and is compatible with OPEN IVR 2.01 and 2.5 only.
- It cannot be used in conjunction with disk mirroring.

Description	System Compatibility	Product compatibility	W/S
Power Sense Monitor Kit		Meridian MAX	W1

Notes:

- Required only when U0071 is ordered and the original Meridian MAX Release 4 system was equipped with the I/O sub-panel rather than the Universal I/O panel.
- This kit allows mounting of the Power Sense Monitor in the middle of the Application Module as is done in newer systems.

Status

Description	System Compatibility	Product compatibility	W/S
Meridian IVR Applications Module			W1

Notes:

- Each Meridian IVR module package comes with one MVME-167C-34 CPU card installed in slot 1. There are five slots available for housing either the SNA card, X.25 card or the 8-Channel Asynchronous Serial I/O Board. A maximum of 4 MVME332XT 8-Channel Asynchronous Serial I/O Boards may be housed in the Meridian IVR module. The Meridian IVR module comes pre-configured with certain VME transition cards factory installed. This is the case for all slots except for slot 6. Slot 6 is not automatically shipped with a pre-installed transition card. A transition card may by optionally placed here during the initial system order upon customer request or it can be field installed at a later date.

Qty	Order code	Description	Qty	Order code	Description
1	A0351166	MVME705B Transition Card (for MVME333)	3	NT6D51AA	Transition Card (for MVME332)
1	A0601182	MVME712M Transition Card without built-in modem (for MVME167 and MVME177)	1	NT7D63AB	AM Chassis

Call Center Software 100, New System (1 Agent)	11C X11 R22D; 51C X11 R22D; 61C X11 R22D; 81 X11 R22D; 81C X11 R22D	Meridian MAX R7,8	W1

Notes:

- Transaction fee SV000117, $500.00, applies whenever additional agents or features are added.
- This package includes 100 client/supervisor sessions. There can only be a total of 100 client/supervisor sessions enabled regardless of the number of agent packages purchased.
- CCS 100 enables the basic call processing, supervision, and MIS capabilities of the SYMPOSIUM Call Center Server. This software package enables Call Resource Manager and Real-Time Interface keycodes.
- Requires SYMPOSIUM Call Center Server Base Software as a prerequisite.
- For SYMPOSIUM Call Center systems that are used with Meridian 1 Options 51C, 61C, 81, and 81C: the purchase of Call Center Software 100 also includes the following X11 prerequisites: SYMPOSIUM Call Center, Enhanced ACD Routing, Enhanced Custom Controlled Routing, and Hold in Queue for IVR.
- For SYMPOSIUM Call Center systems that are used with Meridian 1 Option 11C the X11 Release 22D Enterprise Software is required (additional charge).
- The Meridian 1 Serial number must be provided when ordering this code for an existing Meridian 1 system.

Call Center Software 100, New System (50 Agent)	11C X11 R22D; 51C X11 R22D; 61C X11 R22D; 81 X11 R22D; 81C X11 R22D	Meridian MAX R7,8	W1

Notes:

- Transaction fee SV000117, $500.00, applies whenever additional agents or features are added.
- This package includes 100 client/supervisor sessions. There can only be a total of 100 client/supervisor sessions enabled regardless of the number of agent packages purchased.
- CCS 100 enables the basic call processing, supervision, and MIS capabilities of the SYMPOSIUM Call Center Server. This software package enables Call Resource Manager and Real-Time Interface keycodes.
- Requires SYMPOSIUM Call Center Server Base Software as a prerequisite.
- For SYMPOSIUM Call Center systems that are used with Meridian 1 Options 51C, 61C, 81, and 81C: the purchase of Call Center Software 100 also includes the following X11 prerequisites: Symposium Call Center, Enhanced ACD Routing, Enhanced Custom Controlled Routing, and Hold in Queue for IVR.
- For SYMPOSIUM Call Center systems that are used with Meridian 1 Option 11C the X11 Release 22D Enterprise Software package is required (additional charge).
- The Meridian 1 Serial number must be provided when ordering this code for an existing Meridian 1 system.

Call Center Software 100, Upgrade from MAX 7/8/9 Fundamental or Enhanced (100 Agent)	11C X11 R22D; 51C X11 R22D; 61C X11 R22D; 81 X11 R22D; 81C X11 R22D	Meridian MAX R7,8	W1

Notes:

- CCS 100 enables the basic call processing, supervision, and MIS capabilities of SYMPOSIUM Call Center. This software package enables Call Resource Manager and Real-Time Interface keycodes.
- This package includes 100 client/supervisor sessions. There can only be a total of 100 client/supervisor sessions enabled regardless of the number of agent packages purchased.
- Requires SYMPOSIUM Base Software as a prerequisite.
- For SYMPOSIUM Call Center systems that are used with Meridian 1 Options 51C, 61C, 81, and 81C. The purchase of Call Center Software 100 also includes the following X11 prerequisites: SYMPOSIUM Call Center, Enhanced ACD Routing, Enhanced Custom Controlled Routing, and Hold in Queue for IVR.
- For SYMPOSIUM Call Center systems that are used with Meridian 1 Option 11C the X11 Release 22D Enterprise Software is required (additional charge).
- All customers with any version (Fundamental, Enhanced or Virtual) of Meridian MAX 7, 8, and 9 may upgrade to this package.
- During the initial upgrade, a customer may purchase an unlimited number of agents at the upgrade price. Future upgrades will be charged at New System Prices.
- The Meridian 1 Serial number must be provided when ordering this code.

For use only by Nortel Networks and Nortel Networks' authorized distributors. Not for public disclosure.

Call Center Software 300, Upgrade From NACD (1 Agent)	11C X11 R22D; 51C X11 R22D; 61C X11 R22D; 81 X11 R22D; 81C X11 R22D	Meridian MAX R7,8	W1

Notes:

- The initial release of SYMPOSIUM Call Center Server (CCS) networking includes only Interworking with Network ACD. Additional networking functionality which includes Network Wide Skills-based Routing will be provided in a future software upissue.
- For SYMPOSIUM Call Center systems that are used with Meridian 1 Options 51C, 61C, 81, and 81C; the purchase of CCS 300 includes the X11 prerequisite Call Center Network at no additional charge; and the X11 packages, SW0050B, Networking; SW0051B, ISDN Networking; SW0052D, Private ISDN Networking; and SW022A, Enhanced ACD Overflow are required which are available at an additional charge.
- For SYMPOSIUM Call Center systems that are used with Meridian Option 11C, the X11 Release 22D Enterprise Software is required (additional charge).
- CCS300 is the networking functionality for SYMPOSIUM Call Center systems.
- Requires SYMPOSIUM Base Software, CCS100, and CCS200 as prerequisites. CCS100, CCS200, and CCS300 agent increments must be set at the same level. (E.g. If CCS100 is set at 200 agents, then CCS200 and CCS300 must also be set at 200 agents.)
- All customers who have implemented Network ACD may upgrade to this package. In the event that CCS100 is purchased as a "new system" then CCS300 must also be purchased as a "new system".
- During the initial upgrade, a customer may purchase an unlimited number of agents at the upgrade price. Future upgrades will be charged at New System Prices.
- The Meridian 1 Serial number must be provided when ordering this code.

Description	System Compatibility	Product compatibility	W/S
Call Center Software 100, Upgrade from CCR only (100 Agent)	11C X11 R22D; 51C X11 R22D; 61C X11 R22D; 81 X11 R22D; 81C X11 R22D	Meridian MAX R7,8	W1

Notes:

- For SYMPOSIUM Call Center systems that are used with Meridian 1 Options 51C, 61C, 81, and 81C, the purchase of Call Center Software 100 also includes the following X11 prerequisites: SYMPOSIUM Call Center, Enhanced ACD Routing, Enhanced customer Controlled Routing, and Hold in Queue for IVR.
- For SYMPOSIUM Call Center systems that are used with Meridian Option 11C, the X11 Release 22D Enterprise Software is required (additional charge).
- CCS100 enables the basic call processing, supervision, and MIS capabilities of SYMPOSIUM Call Center. This software package enables Call Resource Manager and Real-Time Interface keycodes.
- This package includes 100/client/supervisor sessions. There can only be a total of 100 client/supervisor sessions enabled regardless of the number of agent packages purchased.
- Requires SYMPOSIUM Base Software as a prerequisite.
- All customers who have implemented a 20 or 240 script version of CCR but who do not have any version of Meridian MAX running in their call centers may upgrade to this package.
- During the initial upgrade, a customer may purchase an unlimited number of agents at the upgrade price. Future upgrades will be charged at New System Prices.
- The Meridian 1 Serial number must be provided when ordering this code.

- Requires SYMPOSIUM Base Software and CCS100 as prerequisites. CCS100 and CCS200 agent increments must be set at the same level. (E.g. If CCS100 is set at 200 agents, then CCS200 must be set at 200 agents).
- There are no additional X11 prerequisites for this package.
- All Meridian MAX Release 7, 8, and 9 customers using the Virtual package may upgrade to this package.
- During the initial upgrade, a customer may purchase an unlimited number of agents at the upgrade price. Future upgrades will be charged at New System Prices.
- The Meridian 1 Serial number must be provided when ordering this code.

SYMPOSIUM Express Call Center Release 2.0 Base System			S1

Notes:

- The base package provides Call Center software for the first 10 agents, where the number of agents is defined as 'concurrently logged in agents, regardless of agent state.'
- Additional agents can be added to this package in 1, 5, or 10 agent increments to a maximum of 150 agents.
- The list of compatible Meridian 1 systems includes Options 11C, 51C, 61C, 81, and 81C.
- A minimum of X11 Release 23.35 for Option 11C and X11 Release 23.37 for Options 51C through 81C software is required. Note: package SW0221C ACD Message Processing must be purchased.
- If 'partial networking' functionality for inbound calls only is required, the NACD packages must be purchased. (refer to Ordering Guide)
- The customer must provide the PC for the server and clients. See notes in the Ordering Guide.
- The X11 prerequisites are required on the Meridian 1 for this system to function at the agent increment size that was purchased. See the Ordering Guide Bulletin and provide a Tape Prep form with the correct options identified.
- Graphical Real Time Display (GRTD) only works on a Win 95 client that is co-resident with a EXPRESS client. It does not function on the client that is co-resident with a server.
- The Meridian 1 system must be equipped with the appropriate Ethernet IOP or IOP/CMDU card to accommodate the connection to the embedded LAN (ELAN). (Refer to Ordering Guide Bulletin)
- A LAN hub and associated cables are required for the connection of the Meridian 1 PBX to the SYMPOSIUM Express Call Center System. (Refer to Ordering Guide Bulletin). A power cord must be added to this package if configurator is not used to configure the system.
- Meridian Mail or MIRAN is required for the announcements, and Voice menus can be used as a front end to the call center. (Refer to Ordering Guide Bulletin)
- This package contains one each of Server, Client, CDoc, PEP, and GRTD CDs.
- The Meridian 1 serial number must be provided when ordering this code for an existing system.

NTHU21AC

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII from XN/ XT/71 (QCA55/108 Cabinets) Module Upgrade Package AC	71 3311 R25; XN 3311 R25; XT 3311 R25		W1

Notes:

- The package is compatible with XN, XT and Option 71 systems whereby the call processor and network group equipment are contained in QCA55/108 type system cabinets. If the call processor and network for the Option 71 is contained in modules, use package NTHU22AC instead of this package.
- This Option 81C package requires the following feature packages be enabled: NTS101AA (368) Call Processor PII, SW0013A (299) Option 81C Software Package.
- This package assumes the new NT4N41 Call Processor/Network Modules are positioned side-by-side and within 16 cable feet from the QCA55/108 cabinets and 16 cable feet from the MDF. If the new call processor/network modules are required to be stacked one on top of the other, this arrangement must be completed as part of the upgrade installation. Should the pedestal, top cap and other items included in the package not be used because the call processor/network modules are stacked in a single column, these items may not be returned to Nortel Networks for credit.
- The new NT4N41 Call Processor/Network Modules contain empty network card slots equal to one network group capacity. For IGS based systems, (those utilizing QPC412 or NT5D30 cards), to use the network portion of this module, all network groups must be moved from cabinets to network modules. For systems deploying the fiber network fabric (using NTRB33) cards, existing network groups can be retained in QCA55/108 cabinets with additional network groups housed within modules. This mixed configuration is only supported for systems with the fiber network fabric.
- This package contains one NTND33DA Option 81C Core-Cabinet Upgrade Cable Kit, Group 0 for inter-cabinet (i.e. cabinet to module) cabling of the first network group and one NTND33CC Core-Cabinet Upgrade Cable Kit, Groups 1-4 that supports cabling of the second network group and will support a third network group, if required. For a four-to-five group system one additional NTND33CC Upgrade Cable Kit, Groups 1-4 must be ordered separately.
- This package does not include QPC441 Three Port Extender cards (3PE). If additional QPC441 cards are required, they must be ordered separately and must be a minimum vintage "F" or later.
- Clock Controllers are not included in this package. Clock Controllers must be minimum vintage "H" for QPC471 (US Market) or "F" for QPC775 (Canada) or later. If existing Clock Controllers are not the minimum vintage or later, quantity two (2) must be ordered separately.
- This package includes one NT5D40AA Hybrids Kit to upgrade the QSD39 Network shelf that will house the QPC471 Clock Controller. If the second QPC471 Clock Controller will also be installed in a QSD39 Network Shelf rather than the typical QSD40 Shelf, then one additional NT5D40AA Hybrids Kit is required and must be ordered separately.
- This package assumes reuse of either QPC412 or NT5D30 cards which support IGS network fabrics. IGS based networks can support up to a maximum of five network groups. For these systems, network groups must be housed entirely within cabinets or within modules. Mixed network configurations between cabinets and modules are not supported for IGS based systems.
- Fiber network fabric (i.e., systems utilizing the NTRB33 FIJI card), supports growth up to 8 network groups and supports configurations where network groups may be housed in both cabinets and modules. Fiber network fabric can be ordered separately.
- Existing network groups may be converted to the fiber network fabric using package NTHY23AA. Each fiber group conversion kit contains the equipment needed to convert 1 network group. If adopting, all network groups (existing and new) must employ the fiber network fabric.
- Additional network groups, up to a maximum supported of 8, may be added to fiber network systems using the Fiber Network Group Assembly Package, package NTHY20AC. Should an additional column stack be needed to house the additional network group desired, order NTHY24AC which also includes a Top Cap/Pedestal and IPE Module Assembly.
- The fiber network fabric, if desired, requires the following feature package be ordered to support the fiber fabric and eight network groups (NTS103AA).
- A standalone reference guide for the fiber network fabric is available for order separately. To purchase, order NT5F37AA.
- Relocation of clock controllers may impact clock cabling. If existing clock cabling cannot support the relocated clocks, new clock controller cables (either NT8D74 Clock Controller to IGM Cables or NTRC46 Clock to FIJI) and NT8D79 PRI/DTI to Clock Controller cables must be ordered separately.
- This package contains two NT4N65 Compact Core Network Interface cards for connection to the first two existing network groups. If the existing system is equipped with three or more network groups, two additional NT4N65 Compact CNI cards are required for each two additional network groups and must be ordered separately. cCNI Transition Cards, NT4N66, are provided for in this package and will sup-

port up to eight network groups with Fiber Network Fabric. For network groups 4 and 5, one NTND33CC Upgrade Cable Kit must also be ordered.

- The requirements above assume that all existing network groups (0 through 4) are located in SL-1 style cabinets.
- The requirements above assume that all existing network groups (0 through 4) are located in SL-1 style cabinets.

NTHU21DC

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII from XN/ XT/71 (QCA55/108 Cabinets) Module Upgrade Package DC	71 3311 R25; XN 3311 R25; XT 3311 R25		W1

Notes:

- The package is compatible with XN, XT and Option 71 systems whereby the call processor and network group equipment are contained in QCA55/108 type system cabinets. If the call processor and network for the Option 71 are contained in modules, use package NTHU22DC instead of this package.
- This Option 81C package requires the following feature packages be enabled: NTS101AA (Option 368) Call Processor PII, SW0013A (Option 299) Option 81C Software Package.
- This package assumes the new NT4N41 Call Processor/Network Modules are positioned side-by-side and within 16 cable feet from the QCA55/108 cabinets and 16 cable feet from the MDF. If the new call processor/network modules are required to be stacked one on top of the other, this arrangement must be completed as part of the upgrade installation. Should the pedestal, top cap and other items included in the package not be used because the call processor/network modules are stacked in a single column, these items may not be returned to Nortel Networks for credit.
- The new NT4N41 Call Processor/Network Modules contain empty network card slots equal to one network group capacity. For IGS based systems (those utilizing QPC412 or NT5D30 cards) to use the network portion of this module, all network groups must be moved from cabinets to network modules. For systems deploying the fiber network fabric (i.e., systems utilizing NTRB33 FIJI cards), existing network groups can be retained in QCA55/108 cabinets with additional network groups housed within modules. This mixed configuration is only supported for systems that employ the fiber network fabric.
- This package contains one NTND33DA Option 81C Core-Cabinet Upgrade Cable Kit, Group 0 for inter-cabinet (i.e. cabinet to module) cabling of the first network group and one NTND33CC Core-Cabinet Upgrade Cable Kit, Groups 1-4 that supports cabling of the second network group and will support a third network group, if required. For a four-to-five group system, one additional NTND33CC Upgrade Cable Kit, Groups 1-4 must be ordered separately.
- This package does not include QPC441 Three Port Extender cards (3PE). If additional QPC441 cards are required, they must be ordered separately and must be a minimum vintage "F" or later.
- Clock Controllers are not included in this package. Clock Controllers must be minimum vintage "H" for QPC471 (US Market) or "F" for QPC775 (Canada) or later. If existing Clock Controllers are not the minimum vintage or later, quantity two (2) must be ordered separately.
- This package includes one NT5D40AA Hybrids Kit to upgrade the QSD39 Network shelf that will house the QPC471 Clock Controller. If the second QPC471 Clock Controller will also be installed in a QSD39 Network Shelf rather than the typical QSD40 Shelf, then one additional NT5D40AA Hybrids Kit is required and must be ordered separately.
- This package assumes reuse of either QPC412 or NT5D30 cards which support IGS network fabrics. IGS based networks can support up to a maximum of five network groups. For these systems, network groups must be housed entirely within cabinets or within modules. Mixed network configurations between cabinets and modules are not supported for IGS based systems.
- Fiber network fabric (i.e., systems utilizing the NTRB33 FIJI card), supports growth up to 8 network groups and supports configurations where network groups may be housed in both cabinets and modules. Fiber network fabric can be ordered separately.
- Existing network groups may be converted to the fiber network fabric using package NTHY23AA. Each fiber group conversion kit contains the equipment needed to convert 1 network group. If adopting, all network groups (existing and new) must employ the fiber network fabric.
- Additional network groups, up to a maximum supported of 8, may be added to fiber network systems using the Fiber Network Group Assembly Package, package NTHY20DC. Should an additional column stack be required to house the additional network desired, order NTHY24DC which also includes a Top Cap/Pedestal and IPE Module Assembly.
- The fiber network fabric, if desired, requires the following feature package be ordered to support the fiber fabric and eight network groups (NTS103AA).
- A standalone reference guide for the fiber network fabric is available for order separately. To purchase, order NT5F37AA.
- Relocation of clock controllers may impact clock cabling. If existing clock cabling cannot support the relocated clocks, new clock controller cables (either NT8D74 Clock Controller to IGM Cables or NTRC46 Clock to FIJI) and NT8D79 PRI/DTI to Clock Controller cables must be ordered separately.
- This package contains two NT4N65AA Compact Core Network Interface cards for connection to the first two existing network groups. If the existing system is equipped with three or more network groups, two additional NT4N65AA Compact CNI cards are required for each two additional network groups and must be ordered separately. cCNI Transition Cards, NT4N66, are provisioned within this package and support up to eight netowrk groups with Fiber Network Fabric. For network groups 4 and 5, quantity 1 NTND33CC upgrade cable kit must also be ordered.
- The requirements noted above assume that existing network groups (0 through 4) are located in SL-1 style cabinets.

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII from 71/81/81C (NT8D34, NT6D60, NT5D21) Card Cage Upgrade Package AC	71 3311 R25; 81 3311 R25; 81C 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (Option 368) Call Processor PII, SW0013A (Option 299) Option 81C Software Package.
- For Option 81C upgrades, the existing NT5D2101 core/network card cages are replaced with the new call processor/network card cages. The existing conference/TDS, single or dual intergroup switch cards, three port extender, peripheral signaling, SDI paddle boards and DTI/PRI cards, if any of these cards are equipped, are repositioned in the same card slots they previously occupied in the NT5D2101 card cage.
- For Option 81 and module based Option 71 upgrades, the existing common equipment card cages are replaced with the new call processor/network card cages and all existing common equipment cards are discarded except for the clock controller cards. The clock controller cards must be relocated to network modules and may require longer cables that must be ordered separately. If existing clock cabling cannot support the relocated clocks, new clock controller cables (either NT8D74 Clock Controller to IGM Cables for IGS based systems or NTRC46 for fiber network systems using NTRB33 cards) and NT8D79 PRI/DTI to Clock Controller cables must be ordered separately.
- Clock Controllers are not included in this package. Clock Controllers must be minimum vintage "H" for QPC471 (US Market) or "F" for QPC775 (Canada) or later. If existing Clock Controllers are not the minimum vintage or later, quantity two (2) must be ordered separately.
- If the existing common equipment card cage contains DTI/PRI cards, these cards can be repositioned in the empty network card slots of the new call processor card cage.
- The new call processor/network card cages replace the existing card cages in their same column positions (e.g., new card cages are positioned side-by-side or stacked based on the previous arrangement).
- If the existing system is not equipped with the NT1R91AA Modem Kit, this item must be ordered separately.
- This package contains two NT4N65 Compact Core Network Interface cards for connection to the first two existing network groups. If the existing system is equipped with three or more network groups, two additional NT4N65 Compact CNI cards are required for each additional two network groups. cCNI Transition Cards, NT4N66, are provisioned within this package and will support up to eight network groups with Fiber Network Fabric. In addition, four NT8D76 cables must be ordered separately for each additional network group.
- This package provides only the items required to upgrade the call processor components of the existing system. However, the new call processor/network card cages contain empty network card slots equal to one network group capacity and can be populated with network type cards if required.
- This package does not include QPC441 Three Port Extender cards (3PE). If additional QPC441 cards are required, they must be ordered separately and must be a minimum vintage "F" or later.
- This package assumes reuse of either QPC412 or NT5D30 cards which support IGS network fabrics. IGS based networks can support up to a maximum of five network groups. For these systems, network groups must be housed entirely within cabinets or within modules. Mixed network configurations between cabinets and modules are not supported for IGS based systems.
- Fiber network fabric (i.e., systems utilizing the NTRB33 FIJI card), supports growth up to 8 network groups and supports configurations where network groups may be housed in both cabinets and modules. Fiber network fabric can be ordered separately.
- Existing network groups may be converted to the fiber network fabric using package NTHY23AA. Each fiber group conversion kit contains the equipment needed to convert 1 network group. If adopting, all network groups (existing and new) must employ the fiber network fabric.
- Additional network groups, up to a maximum of 8, may be added to fiber network systems using the Fiber Network Group Assembly Package, NTHY20AC. Should an additional column stack be needed to house the additional network group desired, order NTHY24AC which also includes a Top Cap/Pedestal and IPE Module Assembly.
- The fiber network fabric, if desired, requires the following feature package be ordered to support the fiber fabric and eight network groups (NTS103AA).
- A standalone reference guide for the fiber network fabric is available for order separately. To purchase, order NT5F37AA.

Option 81C Call Processor PII from 71/81/81C (NT8D34, NT6D60, NT5D21) Card Upgrade Package DC	71 3311 R25; 81 3311 R25; 81C 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (Option 368) Call Processor PII, SW0013A (Option 299) Option 81C Software Package.
- For Option 81C upgrades, the existing NT5D2101 core/network card cages are replaced with the new call processor/network card cages. The existing conference/TDS, single or dual intergroup switch, three port extender, peripheral signaling, SDI paddle boards and DTI/PRI cards, if any of these cards are equipped, are repositioned in the same card slots they previously occupied in the NT5D2101 card cage.
- For Option 81 and module based Option 71 upgrades, the existing common equipment card cages are replaced with the new call processor/network card cages and all existing common equipment cards are discarded except for the clock controller cards. The clock controller cards must be relocated to network modules and may require longer cables that must be ordered separately. If existing clock cabling cannot support the relocated clocks, new clock controller cables (either NT8D74 Clock Controller to IGM Cables for IGS based systems or NTRC46 for fiber network systems using NTRB33 cards) and NT8D79 PRI/DTI to Clock Controller cables must be ordered separately.
- Clock Controllers are not included in this package. Clock Controllers must be minimum vintage "H" for QPC471 (US Market) or "F" for QPC775 (Canada) or later. If existing Clock Controllers are not the minimum vintage or later, quantity two (2) must be ordered separately.
- If the existing common equipment card cage contains DTI/PRI cards, these cards can be repositioned in the empty network card slots of the new call processor card cage.
- The new call processor/network card cages replace the existing card cages in their same column positions (e.g., new card cages are positioned side-by-side or stacked based on the previous arrangement).
- If the existing system is not equipped with the NT1R91AA Modem Kit, this item must be ordered separately.
- This package contains two NT4N65 Compact Core Network Interface cards for connection to the first two existing network groups. If the existing system is equipped with three or more network groups, two additional NT4N65 Compact CNI cards are required for each additional two network groups. cCNI Transition Cards, NT4N66, are provisioned within this package and will support up to eight network groups with Fiber Network Fabric. In addition, four NT8D76 cables must be ordered separately for each additional network group.
- This package provides only the items required to upgrade the call processor components of the existing system. However, the new call processor/network card cages contain empty network card slots equal to one network group capacity and can be populated with network type cards if required.
- This package does not include QPC441 Three Port Extender cards (3PE). If additional QPC441 cards are required, they must be ordered separately and must be a minimum vintage "F" or later.
- This package assumes reuse of either QPC412 or NT5D30 cards which support IGS network fabrics. IGS based networks can support up to a maximum of five network groups. For these systems, network groups must be housed entirely within cabinets or within modules. Mixed network configurations between cabinets and modules are not supported for IGS based systems.
- Fiber network fabric (i.e., systems utilizing the NTRB33 FIJI card), supports growth up to 8 network groups and supports configurations where network groups may be housed in both cabinets and modules. Fiber network fabric can be ordered separately.
- Existing network groups may be converted to the fiber network fabric using package NTHY23AA. Each fiber group conversion kit contains the equipment needed to convert 1 network group. If adopting, all network groups (existing and new) must be converted to the fiber network fabric.
- Additional network groups, up to a maximum of 8, may be added to fiber network systems using the Fiber Network Group Assembly Package,NTHY20DC. Should an additional column stack be needed to house the additional network group desired, order NTHY24DC which also includes a Top Cap/Pedestal and IPE Module Assembly.
- The fiber network fabric, if desired, requires (NTS103AA) feature package be ordered to support the fiber fabric and eight network groups.
- A standalone reference guide for the fiber network fabric is available for order separately. To purchase, order NT5F37AA.

NTHU24AC

Description	System Compatibility	Product compatibility	W/S
Option 81C from Option 61C (NT5D21) Upgrade AC	61C		W1

Notes:

- This Option 81C package requires that the Fiber Network Software Package (NTS103AA) be enabled.
- Option 81C systems utilizing the 68040 Call Processor require X11 Release 25 Software Generic 1911.
- Option 81C systems utilizing the 68060 Call Processor require X11 Release 25 Software Generic 2611.
- Option 81C systems utilizing the 68060E Call Processor require X11 Release 25 Software Generic 3011.
- Memory upgrade kit NTZC75 supports DRAM memory upgrade of existing processors to minimum 80MB DRAM per processor. Depending upon existing processor type, up to three (3) of NTZC75 kits per processor may be required.
- This package assumes that the existing processors with the Option 61C are reused and provides an upgrade to an Option 81C with the fiber network (based on NTRB33 FIJI cards). Customers wishing to deploy the Call Processor PII should order package NTHU22AC if requiring a card cage exchange or NTHU21AC if requiring a module based exchange.
- This package is applicable to Option 61C systems with NT5D21 Core/Network Modules only and assumes these modules are reused. Option 61C systems with NT9D11 Core/Network Modules should order package NTHU28AC.
- This package contains sixteen NT8D18AA Tip and Ring cables within the IPE modules.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-to-side must be determined and ordered separately.
- This package includes two 3PE (QPC441) cards. If additional 3PE cards are required, they must be ordered separately. Vintage must be "F" or later.
- The Option 81C requires two (2) Clock Controller cards (QPC471 that are vintage "H" or later). If these cards are not presently equipped in the system to be upgraded, they must be ordered separately.
- Relocation of clock controllers may impact clock cabling. If existing cabling cannot support the relocated clocks, NT8D79 PRI/DTI to Clock Controller cables must be ordered separately.
- One NT8D21AA Ringing Generator AC must be added for each IPE Module in which analog type peripheral cards are to be used.
- This package assumes that the existing CNI 2 Port (NT6D65AA) cards will be reused (one for each Core/Network Module) to support the first two network groups. Additional network groups can be supported using combinations of either CNI-2 or CNI-3 (NTRB34) cards. Systems wishing to expand to seven or eight network groups must utilize CNI-3 cards (minimum two of the three total on each side of the core - side 0 and side 1).
- CNI-3 Port Cards must be purchased separately and also reside in the Core/Network Module for Option 81C Systems. Systems using CP PII employ a cPCI version of the CNI-2 port card (NT4N65).
- This package contains two fiber network groups. For additional fiber based network groups, order using either Fiber Network Group Assembly NTHY20AC or the Fiber Network Group Column Package NTHY24AC. The Fiber Network Group Column Package also includes Top Cap/Pedestal and IPE Module Assemblies.
- If the Option 61C system is equipped with two (2) IOP/CMDU Cards (NT5D20) or separate IOP and CMDU Cards (NT6D63 and NT6D64), then two (2) NT5D61AB IODU-C cards must be ordered separately. IODU-C cards are required to support Release 24 and later software.
- This package assumes reuse of existing modems (NT1R91AA). If no modem exists, it must be ordered separately.

Description	System Compatibility	Product compatibility	W/S
Option 81C from Option 61C (NT5D21) Upgrade DC	61C		W1

Notes:

- This Option 81C package requires that the Fiber Network Software Package (NTS103AA) be enabled.
- Option 81C systems utilizing the 68040 Call Processor require X11 Release 25 Software Generic 1911.
- Option 81C systems utilizing the 68060 Call Processor require X11 Release 25 Software Generic 2611.
- Option 81C systems utilizing the 68060E Call Processor require X11 Release 25 Software Generic 3011.
- Memory upgrade kit NTZC75 supports DRAM memory upgrade of existing processors to minimum 80MB DRAM per processor. Depending upon the existing processor type, up to three (3) of NTZC75 kits per processor may be required.
- This package assumes that the existing processors with the Option 61C are reused and provides an upgrade to an Option 81C with the fiber network (based on NTRB33 FIJI cards). Customers wishing to deploy the Call Processor PII should order package NTHU22DC if requiring a card cage exchange or NTHU21DC if requiring a module based exchange.
- This package is applicable to Option 61C systems with NT5D21 Core/Network Modules only and assumes these modules are reused. Option 61C systems with NT9D11 Core/Network Modules should order package NTHU28DC.
- This package contains sixteen NT8D18AA Tip and Ring cables within the IPE modules.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect.
- This package includes two 3PE (QPC441) cards. If additional 3PE cards are required, they must be ordered separately. Vintage must be "F" or later.
- The Option 81C requires two (2) Clock Controller cards (QPC471 that are vintage "H" or later). If these cards are not presently equipped in the system to be upgraded, they must be ordered separately.
- Relocation of clock controllers may impact clock cabling. If existing cabling cannot support the relocated clocks, NT8D79 PRI/DTI to Clock Controller cables must be ordered separately.
- One NT6D42CD Ringing Generator DC must be added for each IPE Module in which analog type peripheral cards are to be used.
- This package assumes that the existing CNI 2 Port (NT6D65AA) cards will be reused (one for each Core/Network Module) to support the first two network groups. Additional network groups can be supported using combinations of either CNI-2 or CNI-3 (NTRB34) cards. Systems wishing to expand to seven or eight network groups must utilize CNI-3 cards (minimum two of the three total on each side of the core - side 0 and side 1).
- CNI-3 Port Cards must be purchased separately and also reside in the Core/Network Module for Option 81C Systems. Systems using CP PII employ a cPCI version of the CNI-2 port card (NT4N65).
- This package contains two fiber network groups. For additional fiber based network groups, order either the Fiber Network Group Assembly, NTHY20DC or the Fiber Network Group Column Kit NTHY24DC. The Fiber Network Group Column Package also includes Top Cap/Pedestal and IPE Module Assemblies to provide another column stack in which to house the additional network group.
- If the Option 61C system is equipped with two (2) IOP/CMDU Cards (NT5D20) or separate IOP and CMDU Cards (NT6D63 and NT6D64), then two (2) NT5D61AB IODU-C cards must be ordered separately. IODU-C cards are required to support Release 24 and later software.
- This package assumes reuse of existing modems (NT1R91AA).

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII from Option 51 or 61 (NT6D39)/51C or 61C (NT9D11, NT5D21) Upgrade Package AC	51 3311 R25; 51C 3311 R25; 61 3311 R25; 61C 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (368) Call Processor PII, NTS103AA (365) Fiber Network Software Package, SW0013A (299) Option 81C Software Package.
- The maximum number of network groups supported on Option 81C and the fiber network fabric is eight groups with X11 Release 25 or later software.
- This package is equipped with two (2) fiber network groups. Additional groups may be ordered using the Fiber Network Group Assembly Package, NTHY20AC. If an additional column is required to house the additional network group, NTHY24AC can be ordered. The NTHY24AC includes Top Cap/Pedestal and IPE Module Assembly and provides an additional column stack to house the additional network group, if needed.
- This package contains two NT4N65 and the associated cables that provide CNI to 3PE connections for the first two network groups. This package also contains cCNI Transition Cards, NT4N66, which will support up to eight network groups with Fiber Network Fabric. Additional network groups require the purchase of two NT4N65 and eight NT8D76 cables which will support two additional network groups. These must be ordered separately.
- This package does not include one additional clock controller card for Option 51/51C Upgrades and must be ordered separately. The minimum vintage of all clock controller cards is H for QPC471 (or F for QPC775).
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-by-side must be ordered separately.
- One NT8D21AB Ringing Generator AC must be added for each IPE Module in which analog type peripheral cards are to be used. Otherwise, one NT7D05AA Filler Panel-Ringing Generator must be equipped.
- This package includes sixteen NT8D81AA Tip and Ring Cables within the IPE Module.
- This package assumes the new NT4N46 Card Cage replaces the existing NT6D39, NT9D11 or NT5D21 Card Cage located directly above the existing pedestal and a new NT4N41 module is placed to the left side of the Card Cage that was upgraded with NT4N46. The new NT4N41 module is positioned directly on top of the pedestal that is included in this package. Likewise, the two (2) NT8D35BA network modules are positioned directly on top of the NT4N41AA module. The QPC43, QPC441, and DTI/PRI cards and the second existing NT6D39, NT9D11, or NT5D21 Card Cage are relocated to the NT4N41AA module. For Option 61 or 61C Upgrades, the second existing NT6D39, NT9D11, or NT5D21 Card Cage is not replaced and may be converted to an IPE Card Cage using the NT1R89BA Card Cage Expansion Kit.
- As an option for Option 61 or Option 61C upgrades, the NT4N46 card cage can be removed from the NT4N41 module and used to replace the second NT9D11 or NT5D21 card cage. If this method is chosen, the NT4N41 module enclosure, pedestal, top cap and other items related to these items may not be returned to Nortel Networks for credit.
- This package does not include one additional NT8D17FA, QPC43R or QPC441F cards for Option 51/51C upgrades and must be ordered separately. The minimum vintage of all NT8D17 cards must be "FA". Likewise, all QPC43 cards must all be vintage "R" or later. The minimum vintage for QPC441 cards must be "F" or later.
- Existing QPC412 or NT5D30 Intergroup Switch cards are replaced with NTRB33AA Fiber Junctor Interface (FIJI) cards that are included in this package.

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII from Option 51 or 61 (NT6D39)/51C or 61C (NT9D11, NT5D21) Upgrade Package DC	51 3311 R25; 51C 3311 R25; 61 3311 R25; 61C 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (Option 368) Call Processor PII, NTS103AA (Option 365) Fiber Network Software Package, SW0013A (Option 299) Option 81C Software Package.
- The maximum number of network groups supported on Option 81C and the fiber network fabric is eight groups with X11 Release 25 or later software.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-by-side must be ordered separately.
- One NT6D42CD Ringing Generator DC must be added for each IPE Module in which analog type peripheral cards are to be used. Otherwise, one NT7D05AA Filler Panel-Ringing Generator must be equipped.
- This package includes sixteen NT8D81AA Tip and Ring Cables within the IPE Module.
- This package is equipped with two (2) fiber network groups. Additional groups may be ordered using the Fiber Network Group Assembly Package, NTHY20DC. If an additional column is required to house the additional network group, NTHY24DC can be ordered. The NTHY24DC includes Top Cap/Pedestal and IPE module assembly and provides and additional column stack to house the additional network group, if needed.
- This package contains two NT4N65 and the associated cables that provide CNI to 3PE connections for the first two network groups. This package also contains cCNI Transition Cards, NT4N66, which will support up to eight network groups with the Fiber Network Fabric. Additional network groups require the purchase of two NT4N65 and eight NT8D76 cables which will support two additional groups. These must be ordered separately.
- This package assumes the new NT4N46 Card Cage replaces the existing NT6D39, NT9D11 or NT5D21 Card Cage located directly above the existing pedestal and a new NT4N41 module is placed to the left side of the Card Cage that was upgraded with NT4N46. The new NT4N41 module is positioned directly on top of the pedestal that is included in this package. Likewise, the two (2) NT8D35BA network modules are positioned directly on top of the NT4N41AA module.
- The QPC43, QPC441, and DTI/PRI cards and the second existing NT6D39, NT9D11, or NT5D21 Card Cage are relocated to the NT4N41AA module. For Option 61 or 61C upgrades, the second existing NT6D39, NT9D11, or NT5D21 Card Cage is not replaced and may be converted to an IPE Card Cage using the NT1R89BA Card Cage Expansion Kit.
- As an option for Option 61 or Option 61C upgrades, the NT4N46 card cage can be removed from the NT4N41 module and used to replace the second NT9D11 or NT5D21 card cage. If this method is chosen, the NT4N41 module enclosure, pedestal, top cap and other items related to these items may not be returned to Nortel Networks for credit.
- This package does not include one additional clock controller card for Option 51/51C upgrades and must be ordered separately. The minimum vintage of all clock contoller cards is H for QPC471 (or F for QPC775).
- This package does not include one additional NT8D17FA, QPC43R or QPC441F cards for Option 51/51C upgrades and must be ordered separately. The minimum vintage of all NT8D17 cards must be "FA". The minimum vintage of all QPC43 cards must be "R" or later. The minimum vintage of QPC441 cards must be "F" or later.
- Existing QPC412 or NT5D30 Intergroup Switch cards are replaced with NTRB33AA Fiber Junctor Interface (FIJI) cards that are included in this package.

NTHU29AC

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII from L/LE/N/VL/VLE/XL/NT Module Upgrade Package AC	L 3311 R25; LE 3311 R25; N 3311 R25; NT 3311 R25; VL 3311 R25; VLE 3311 R25; XL 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (Option 368) Call Processor PII, NTS103AA (Option 365) Fiber Network Software Package, SW0013A (Option 299) Option 81C Software Package.
- The maximum number of network groups supported on Option 81C and the fiber network fabric is eight groups with X11 Release 25 or later software.
- This package is equipped with two (2) network groups. Additional groups may be ordered using the Fiber Network Group Assembly Package, NTHY20AC. If the addition of a network group requires an additional column stack, order NTHY24AC which also includes a Top Cap/Pedestal and IPE Module Assembly.
- This package contains two NT4N65 and the associated cabling that provide CNI to 3PE connections for the first two network groups. This package also contains cCNI Transition Cards, NT4N66, which will support up to eight network groups with the Fiber Network Fabric. Additional network groups require the purchase of two NT4N65 and eight NT8D76 cables which support two additional network groups. These must be ordered separately.
- Clock controllers are not included in this package. Clock controllers must be minimum vintage "H" or later for QPC471. If existing clock controllers are not the minimum vintage or later, a quantity of two (2) must be ordered separately.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-by-side must be ordered separately.
- One NT8D21AB Ringing Generator AC must be added for each IPE Module in which analog type peripheral cards are to be used. Otherwise, one NT7D05AA Filler Panel-Ringing Generator must be equipped.
- This package includes sixteen NT8D81AA Tip and Ring Cables within the IPE Module.
- If the new call processor/network modules are required to be stacked one on top of the other, this arrangement must be completed as part of the upgrade installation. Should the pedestal, top cap and other items included in the package not be used, because the call processor/network modules are stacked, please note that these items may not be returned to Nortel Networks for credit.
- This package does not provide the cables and network cards required to reconnect all existing peripheral equipment (EPE) cards contained in QCA cabinets. These requirements must be engineered and ordered separately.

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII from L/LE/N/VL/VLE/XL/NT Module Upgrade Package DC	L 3311 R25; LE 3311 R25; N 3311 R25; NT 3311 R25; VL 3311 R25; VLE 3311 R25; XL 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (368) Call Processor PII, NTS103AA (365) Fiber Network Software Package, SW0013A (299) Option 81C Software Package.
- The maximum number of network groups supported on Option 81C and the fiber network fabric is eight groups with X11 Release 25 or later software.
- This package is equipped with two (2) network groups. Additional groups may be ordered using the Fiber Network Group Expansion Package, NTHY20DC. Should an additional column stack be needed to house the additional network group, order NTHY24DC which also includes a Top Cap/Pedestal and IPE module assembly.
- This package contains two NT4N65 and the associated cabling that provide CNI to 3PE connections for the first two network groups. This package also contains cCNI Transition Cards, NT4N66, which will support up to eight network groups with the Fiber Network Fabric. Additional network groups require the purchase of two NT4N65 and eight NT8D76 cables which support two additional network groups. These must be ordered separately.
- Clock controllers are not included in this package. Clock controllers must be minimum vintage "H" or later for QPC471. If existing clock controllers are not the minimum vintage or later, quantity two (2) must be ordered separately.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-by-side must be ordered separately.
- One NT6D42CD Ringing Generator DC must be added for each IPE Module in which analog type peripheral cards are to be used. Otherwise, one NT7D05AA Filler Panel-Ringing Generator must be equipped.
- This package includes sixteen NT8D81AA Tip and Ring Cables within the IPE Module.

Description	System Compatibility	Product compatibility	W/S
Fiber Network Group Assembly Package AC	81; 81C		W1

Notes:

- This package is for customers wishing to add a network group with room within existing column stacks for the additional network group. Those customers wishing to place the additional network group in a separate column stack to take advantage of simplified cabling, can order package NTHY24AC which includes top cap, pedestal and an IPE Module.
- Fiber ring cables (NTRC48) quantity 2 per network group are configuration dependent and must be ordered separately.
- Network, Conference and Tone & Digit Cards must be ordered as separate items.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-to-side must be determined and ordered separately.
- This package is compatible with X11 Release 25 and later. Feature Package 365 (NTS103AA) is required to support the fiber network fabric.
- Customers wishing to relocate clock controllers may need to order two (2) new Clock to FIJI cables (NTRC46) and one (1) Clock-Clock Synch Cable (NTRC49) of appropriate length.
- One FIJI - FIJI Synch Cable (NTRC47AA) is included in this package to support connection between FIJI cards on side 0 and side 1. One of these cables is required per fiber network group, other than group 0.
- CP PII and Fiber Network Reference Guide, NT5F36AA may be ordered separately if not already on hand (or the former Fiber Network Reference Guide, NT5F37AA is not on hand).
- This kit does not include CNI-2 to 3PE cables (NTND14) or CNI-3 to 3PE Cables (NT9D89), which are configuration dependent and must be ordered separately. NTND14 cables are used to connect the first two ports (0 and 1) from the backplane of either a CNI-2 port card (NT6D65) or CNI-3 card (NTRB34) to a 3PE card (QPC441). NT9D89 cables are used to connect the third port (2) from the faceplate of a CNI-3 card to a 3PE card.

Description	System Compatibility	Product compatibility	W/S
Option 81C Fiber Core Network Group 0 Kit	81C X11 R25		W1

Notes:

- This package is for customers wishing to equip the network portion of the Core/Network Module or cPCI Core/Network Module Fiber Ring Cables (2-NTRC48) to support Fiber Rings for side 0 and side 1 are configuration dependent and must be ordered separately.
- Systems wishing to deploy this package should be using NTRB33 (FIJI) cards within their network modules. Systems with QPC412 (IGS) cards or NT5D30 (DIGS) cards within their network modules should order AS1250.
- Fiber Ring Cables (2-NTRC48) to support Fiber Rings for side 0 and side 1 are configuration dependent and must be ordered separately.
- Network, Conference and Tone and Digit Cards must be ordered separately as required.
- CP PII and Fiber Network Reference Guide, NT5F36AA may be ordered separately if not already on hand (or the former Fiber Network Reference Guide, NT5F37AA is not on hand).
- This kit does not include CNI to 3PE cables (NTND14) or CNI-3 to 3PE Cables (NT9D89), which are configuration dependent and must be ordered separately. NTND14 cables are used to connect the first two ports (0 and 1) from the backplane of either a CNI card (NT6D65) or CNI-3 card (NTRB34) to a 3PE card (QPC441). NTHY23AA

Description	System Compatibility	Product compatibility	W/S
FIJI Group Conversion Kit	81; 81C		W1

Notes:

- This package is compatible with customers on or ordering X11 Release 25 with Option 365 enabled who wish to take advantage of the fiber network fabric for Option 81/81C systems.
- This package is for customers wishing to replace IGS Switching Fabric with the Fiber Network Fabric. It is used to replace IGS (QPC412) or DIGS (NT5D30) cards. This package supports exchange of one existing network group. If converting to the fiber network fabric, each network group (existing or new) must be fiber based.
- To add a new fiber network group to Option 81 or 81C systems, one (1) package NTHY20AC/DC Fiber Network Group Assembly must be purchased. The NTHY20 package includes the network module to house equipment to support the additional network group. For systems who require an additional column stack in which to house the additional network group, NTHY24AC Fiber Network Group Column kit may be ordered instead of NTHY20AC. The NTHY24AC package also includes a Top Cap/Pedestal and IPE Module Assembly.
- This package does not include CNI cards. Systems with NT6D65 cards (2 port CNI cards) can support up to 6 network groups with Release X11 Release 25 and Option 365 enabled (NTS103AA). Should more than six network groups be desired, then CNI-3 Port Cards (NTRB34AA) must replace CNI-2 port cards as required. Mixture of CNI-2 and CNI-3 port cards in the same core or core/network module are supported configurations provided that the same mix of cards resides on each side of the core.
- This package does not include NTRC46 Clock to FIJI Cables. Two (2) NTRC46 of appropriate length must be ordered separately if not already equipped.
- CP PII and Fiber Network Reference Guide, NT5F36AA may be ordered separately if not already on hand (or the former Fiber Network Reference Guide, NT5F37AA is not on hand).
- This kit does not include CNI to 3PE cables (NTND14) or CNI-3 to 3PE Cables (NT9D89), which are configuration dependent and must be ordered separately. NTND14 cables are used to connect the first two ports (0 and 1) from the backplane of either a CNI card (NT6D65) or CNI-3 card (NTRB34) to a 3PE card (QPC441). NT9D89 cables are used to connect the third port (2) from the faceplate of a CNI-3 card to a 3PE card.
- This kit does not include Fiber Ring Cables (NTRC48). Two (2) NTRC48 FIJI-to-FIJI Fiber Ring Cables must be ordered for each group that will be converted to Fiber Network Fabric.

Description	System Compatibility	Product compatibility	W/S
Fiber Network Group Column Package AC	81; 81C		W1

Notes:

- This package is applicable to systems using a fiber network based on NTRB33 (FIJI cards) where customers wish to provision an additional network group within a separate column stack to take advantage of standardized cabling lengths.
- Network modules should be placed in tier positions (2 and 3). An IPE module is equipped within the package to reside within tier position #1 within a column stack.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-to-side must be determined and ordered separately.
- This package does not include Core-Network Interface Cards (CNI). CNI-2 port cards (NT6D65) support up to two network groups per card. CNI-3 port cards (NTRB34) support up to three network groups per card. CNI-2 and CNI-3 port cards can be co-mingled within 81/81C systems. The mix of cards between CNI-2 and CNI-3 must be the same for both side 0 and side 1 of the Core/Network Modules.
- Customers wishing to relocate clock controllers may need to order new Clock to FIJI cables of greater length (two (2) NTCR46 - one for each clock).
- Relocation of Clock Controllers may require longer NT8D79 PRI/DTI to Clock Controller cables as well as NTRC49 Clock-Clock Synch Cable of appropriate length may be required and must be ordered separately.
- One FIJI - FIJI Synch Cable (NTRC47AA) is included in this package to support connection between FIJI cards on side 0 and side 1. One of these cables is required per fiber network group.
- Fiber ring cables (NTRC48) quantity 2 per network group are configuration dependent and must be ordered separately.
- One NT8D21AB Ringing Generator must be added for each IPE module housing analog type peripheral cards. Otherwise, one NT7D05AA Filler Panel-Ringing Generator must be equipped.
- This package includes sixteen Tip and Ring cables within the IPE Module.
- Network, Conference and Tone & Digit Cards must be ordered as separate items.
- This package is compatible with X11 Release 25 and later. Feature Package 365 (NTS103AA) to support the fiber ring fabric and must be ordered and enabled on Option 81/81C systems.
- CP PII and Fiber Network Reference Guide, NT5F36AA may be ordered separately if not already on hand (or the former Fiber Network Reference Guide, NT5F37AA is not on hand).
- This kit does not include CNI to 3PE cables (NTND14) or CNI-3 to 3PE Cables (NT9D89), which are configuration dependent and must be ordered separately. NTND14 cables are used to connect the first two ports (0 and 1) from the backplane of either a CNI card (NT6D65) or CNI-3 card (NTRB34) to a 3PE card (QPC441). NT9D89 cables are used to connect the third port (2) from the faceplate of a CNI-3 card to a 3PE card.

Fiber Network Group Column Package DC	81; 81C		W1

Notes:

- This package is applicable to systems using a fiber network fabric based on NTRB33 (FIJI cards) where customers wish to provision an additional network group within a separate column stack to take advantage of standardized cabling lengths.
- Network modules should be placed in tier positions (2 and 3). An IPE module is equipped within the package to reside within tier position #1 within a column stack.
- One NT6D42CB Ringing Generator must be added for each IPE module housing analog type peripheral cards. Otherwise, one NT7D05AA Filler Panel-Ringing Generator must be equipped.
- This package does not include Core-Network Interface Cards (CNI). CNI-2 port cards (NT6D65) support up to two network groups per card. CNI-3 port cards (NTRB34) support up to three network groups per card. CNI-2 and CNI-3 port cards can be co-mingled within 81/81C systems. The mix of cards between CNI-2 and CNI-3 must be the same for both side 0 and side 1 of the Core/Network Modules.
- Customers wishing to relocate clock controllers may need to order new Clock to FIJI cables of greater length (two (2) NTCR46 - one for each clock).
- Relocation of Clock Controllers may require longer NT8D79 PRI/DTI to Clock Controller cables as well as NTRC49 Clock-Clock Synch Cable of appropriate length may be required and must be ordered separately.
- One FIJI - FIJI Synch Cable (NTRC47AA) is included in this package to support connection between FIJI cards on side 0 and side 1. One of these cables is required per fiber network group.
- Fiber ring cables (NTRC48) quantity 2 per network group are configuration dependent and must be ordered separately.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-to-side must be determined and ordered separately.
- This package includes sixteen Tip and Ring cables within the IPE Module.
- Network, Conference and Tone & Digit Cards must be ordered as separate items.
- This package is compatible with X11 Release 25 and later. Feature Package 365 (NTS103AA) to support the fiber ring fabric and must be ordered and enabled on Option 81/81C systems.
- CP PII and Fiber Network Reference Guide, NT5F36AA may be ordered separately if not already on hand (or the former Fiber Network Reference Guide, NT5F37AA is not on hand).
- This kit does not include CNI to 3PE cables (NTND14) or CNI-3 to 3PE Cables (NT9D89), which are configuration dependent and must be ordered separately. NTND14 cables are used to connect the first two ports (0 and 1) from the backplane of either a CNI card (NT6D65) or CNI-3 card (NTRB34) to a 3PE card (QPC441). NT9D89 cables are used to connect the third port (2) from the faceplate of a CNI-3 card to a 3PE card.

Description	System Compatibility	Product compatibility	W/S
ACD-D to Meridian MAX-SNNE Release 9 Software Upgrade	21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-SNNE	S1

Notes:

- Order when upgrading from any ACD-D system to a MAX-SNN/SNNE Release 9 system.
- Requires a MAX-SNN/SNNE hardware platform.
- Requires one of the following hardware upgrades to a Meridian MAX-SNNE: NTJH15BA PDP-11, HP Vectra, MAX-IPE/IPEE to Meridian MAX-SNNE Hardware Upgrade, AC Power - North America; NTJH15AA PDP-11, HP Vectra, MAX-IPE/IPEE to Meridian MAX-SNNE Hardware Upgrade, DC Power - North America.
- Requires X11 Release 17 or later.
- For X11 Release 17, prerequisites are SW0201B Basic ACD Features, SW0202C Advanced ACD Features, SW0203B ACD Reports Features, SW0204A ACD Load Management, SW0205A ACD Link (MAX) and SW0206A MAX Report Enhancements.
- For Release 18/19/20/21/22, prerequisites are SW0221A ACD/Message Processing (Release 18 only), SW0221B ACD/Message Processing (Release 19 only), SW0221C ACD/Message Processing (Release 20 and above), SW0224A Enhanced Call Center Management, and SW0222A Enhanced ACD Overflow.
- No preservation or conversion of ACD-D customer data is possible with this upgrade. Customers must start data gathering from scratch once the installation of MAX 9 is complete.
- All upgrades to Meridian MAX Release 9 will result in the provision of MAX 9 software equivalent in feature content and capacity to the MAX 9 Enhanced software package. The number of asynchronous I/O channels and agent positions that will be supported will be determined by their respective numbers on the system to be upgraded.
- Enhanced and Virtual software include the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- Hardware and software to support additional asynchronous I/O ports must be purchased separately. Software to support additional agent positions must be purchased separately.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel Networks representative.
- The Meridian 1 Serial number must be provided when ordering this code.

Meridian MAX-AM Release 3 or 4 to Meridian MAX-SNNE Release 9 Software Upgrade	21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-SNNE	S1

Notes:

- Order when upgrading from any Meridian MAX-SEE, or MAX Option 1-4 Release 3 or 4 system to a MAX-SNN/SNNE Release 9 system.
- Requires a MAX-SNN/SNNE hardware platform.
- If upgrading from a MAX-SEE, MAX Option 1, or Option 2 to a MAX-SNNE order the following: NTJH15CA Meridian Option MAX/ MAX-SEE to Meridian MAX-SNNE System Upgrade - North America.
- Requires X11 Release 17 or later.
- For X11 Release 17, prerequisites are SW0201B Basic ACD Features, SW0202C Advanced ACD Features, SW0203B ACD Reports Features, SW0204A ACD Load Management, SW0205A ACD Link (MAX) and SW0206A MAX Report Enhancements.
- For Release 18/19/20/21/22, prerequisites are SW0221A ACD/Message Processing (Release 18 only), SW0221B ACD/Message Processing (Release 19 only), SW0221C ACD/Message Processing (Release 20 and above), SW0224A Enhanced Call Center Management, and SW0222A Enhanced ACD Overflow.
- All upgrades to Meridian MAX Release 9 will result in the provision of MAX 9 software equivalent in feature content and capacity to the MAX 9 Enhanced software package. The number of asynchronous I/O channels and agent positions that will be supported will be determined by their respective numbers on the system to be upgraded.
- Upgrades from any Meridian MAX Option 4 hardware system with 48 asynchronous I/O ports will result in a maximum of 40 ports being equipped on the Meridian MAX-SNNE system. However, up to 60 LAN-based supervisor sessions can be accommodated on the SNNE system with Meridian MAX Release 9.
- Enhanced and Virtual software include the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- Hardware and software to support additional asynchronous I/O ports must be purchased separately. Software to support additional agent positions must be purchased separately.

Description	System Compatibility	Product compatibility	W/S
ACD-D to Meridian MAX-IPEE Release 9 Software Upgrade	11; 11C; 11E; 21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-IPEE	S3

Notes:

- Order when upgrading from any ACD-D to a MAX-IPEE Release 9 system.
- Requires the following new hardware system: NTJH17AA - Meridian MAX-IPEE Module (Option 11) - North America; NTJH17AA - Meridian MAX-IPEE Module (Option 21-81C) - North America.
- No preservation or conversion of ACD-D customer data is possible with this upgrade. Customers must start data gathering from scratch once the installation of MAX 9 is complete.
- IPEE (Option 11) Requires X11 Release 16 or higher. For X11 Release 16 or 18, then prerequisites are SW1132A Enhanced Business Software Update.
- IPEE (Option 11E) Requires X11 Release 16 or higher. For X11 Release 20, then prerequisite is SW1132E Enhanced Business Software Update. For X11 Release 21, then prerequisites are SW1132E Enhanced Business Software Update, NTBK83BE or NTBK83BG Enhanced Business Software, NTBK83EE or NTBK83EG Enhanced Business Software-no DISA.
- IPEE (Option 11C) Requires X11 Release 16 or higher. For X11 Release 22, then prerequisites are NTSF8021 Enhanced Business Software Package and NTSF8029 Option 11/11E to Option 11C Release 2 Enhanced Business Software Upgrade - Includes MQA.
- IPEE (Options 21-81C) Requires X11 Release 17 or higher. For X11 Release 17, then prerequisites are SW0201B Basic ACD Features (ACD-A), SW0202C Advanced ACD Features (ACD-B), SW0203B ACD Reports (ACD-C1), SW0204A Load Management (ACD-C2), SW0205A ACD Link, and SW0206A MAX Report Enhancements. For X11 Release 18, then prerequisites are SW0221A ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 19, then prerequisites are SW0221B ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 20, 21, 22, then prerequisites are SW0221C ACD/Message Processing and SW0224A Enhanced Call Center Management.
- This upgrade to Meridian MAX Release 9 will result in the provision of MAX 9 software equivalent in feature content and capacity to the MAX 9 Enhanced software package. The number of asynchronous I/O channels and agent positions that will be supported will be determined by their respective numbers on the system to be upgraded.
- Enhanced software includes MEI-Observe, which requires X11 Release 19 or later for Option 21-81C or X11 Release 20 or later for Option 11, 11E, 11C.
- Enhanced software includes the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

Description	System Compatibility	Product compatibility	W/S
ACD-MAX to Meridian MAX-IPEE Release 9 Software Upgrade	11; 11C; 11E; 21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-IPEE	S3

Notes:

- Order when upgrading from any ACD-MAX to a MAX-IPEE Release 9 system.
- Requires the following new hardware system: NTJH17AA - Meridian MAX-IPEE Module (Option 11) - North America; NTJH17AA - Meridian MAX-IPEE Module (Option 21-81C) - North America.
- A Software Data Conversion Kit (AS7506) is temporarily required to convert and move the customer data stored on the ACD-MAX DC150 Tape Cartridge to the Meridian MAX-IPEE system.
- IPEE (Option 11) Requires X11 Release 16 or higher. For X11 Release 16 or 18, then prerequisites are SW1132A Enhanced Business Software Update.
- IPEE (Option 11E) Requires X11 Release 16 or higher. For X11 Release 20, then prerequisite is SW1132E Enhanced Business Software Update. For X11 Release 21, then prerequisites are SW1132E Enhanced Business Software Update, NTBK83BE or NTBK83BG Enhanced Business Software, NTBK83EE or NTBK83EG Enhanced Business Software-no DISA.
- IPEE (Option 11C) Requires X11 Release 16 or higher. For X11 Release 22, then prerequisites are NTSF8021 Enhanced Business Software Package and NTSF8029 Option 11/11E to Option 11C Release 2 Enhanced Business Software Upgrade - Includes MQA.
- IPEE (Options 21-81C) Requires X11 Release 17 or higher. For X11 Release 17, then prerequisites are SW0201B Basic ACD Features (ACD-A), SW0202C Advanced ACD Features (ACD-B), SW0203B ACD Reports (ACD-C1), SW0204A Load Management (ACD-C2), SW0205A ACD Link, and SW0206A MAX Report Enhancements. For X11 Release 18, then prerequisites are SW0221A ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 19, then prerequisites are SW0221B ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 20, 21, 22, then prerequisites are SW0221C ACD/Message Processing and SW0224A Enhanced Call Center Management.
- This upgrade is accomplished by first upgrading to Meridian MAX Release 6 (operating system and application software included) and then from Meridian MAX Release 6 to Meridian MAX Release 9.
- This upgrade to Meridian MAX Release 9 will result in the provision of MAX 9 software equivalent in feature content and capacity to the MAX 9 Enhanced software package. The number of asynchronous I/O channels and agent positions that will be supported will be determined by their respective numbers on the system to be upgraded.
- Enhanced software includes MEI-Observe, which requires X11 Release 19 or later for Option 21-81C or X11 Release 20 or later for Option 11, 11E, 11C.
- Enhanced software includes the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

- Order when upgrading from any Meridian MAX Release 3 or 4 system running on MAX-SEE or Option 1-4 to a MAX-IPEE Release 9 system.
- Requires the following new hardware system: NTJH17AA - Meridian MAX-IPEE Module (Option 11) - North America; NTJH17AA - Meridian MAX-IPEE Module (Option 21-81C) - North America.
- IPEE (Option 11) Requires X11 Release 16 or higher. For X11 Release 16 or 18, then prerequisites are SW1132A Enhanced Business Software Update.
- IPEE (Option 11E) Requires X11 Release 16 or higher. For X11 Release 20, then prerequisite is SW1132E Enhanced Business Software Update. For X11 Release 21, then prerequisites are SW1132E Enhanced Business Software Update, NTBK83BE or NTBK83BG Enhanced Business Software, NTBK83EE or NTBK83EG Enhanced Business Software-no DISA.
- IPEE (Option 11C) Requires X11 Release 16 or higher. For X11 Release 22, then prerequisites are NTSF8021 Enhanced Business Software Package and NTSF8029 Option 11/11E to Option 11C Release 2 Enhanced Business Software Upgrade - Includes MQA.
- IPEE (Options 21-81C) Requires X11 Release 17 or higher. For X11 Release 17, then prerequisites are SW0201B Basic ACD Features (ACD-A), SW0202C Advanced ACD Features (ACD-B), SW0203B ACD Reports (ACD-C1), SW0204A Load Management (ACD-C2), SW0205A ACD Link, and SW0206A MAX Report Enhancements. For X11 Release 18, then prerequisites are SW0221A ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 19, then prerequisites are SW0221B ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 20, 21, 22, then prerequisites are SW0221C ACD/Message Processing and SW0224A Enhanced Call Center Management.
- This upgrade to Meridian MAX Release 9 will result in the provision of MAX 9 software equivalent in feature content and capacity to the MAX 9 Enhanced software package. The number of asynchronous I/O channels and agent positions that will be supported will be determined by their respective numbers on the system to be upgraded.
- Enhanced software includes MEI-Observe, which requires X11 Release 19 or later for Option 21-81C or X11 Release 20 or later for Option 11, 11E, 11C.
- Enhanced software includes the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

Description	System Compatibility	Product compatibility	W/S
Meridian MAX-IPE Release 4.62, 5 or 6 to Meridian MAX-IPE/IPEE Release 9 Software Upgrade	11; 11C; 11E; 21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-IPE; Meridian MAX-IPEE	S1

Notes:

- Order when upgrading from any Meridian MAX-IPE Release 4.62, 5, or 6 system to Meridian MAX-IPE/IPEE Release 9 system.
- This upgrade requires existing Meridian MAX-IPE or new MAX-IPEE hardware. If the upgrade uses existing MAX-IPE hardware, the MAX database size will be configured to either 90 MB or 250 MB, depending upon the size of the Hard Disk Drive (HDD) installed in the existing MAX-IPE Module. If the module contains either a 180 MB or a 240 MB HDD, then the database will be 90 MB. If the module contains a 1.2 GB HDD, then the database will be 250 MB. If the existing MAX-IPE Module contains either a 180 MB or a 240 MB HDD that is limited to the 90 MB database size but the larger 250 MB database size is desired, upgrade to an IPEE.
- If upgrading from a MAX-IPE to a MAX-IPEE order one of the following: NTJH93EA - IPE to IPEE Upgrade/Repair Kit #1 - Global OR NTJH93FA - IPE to IPEE Upgrade/Repair Kit #2 - Global.
- If currently running 155 MB data cassette tapes, three 600 MB data cassette tapes (A0605411) will be required.
- IPEE (Option 11) Requires X11 Release 16 or higher. For X11 Release 16 or 18, then prerequisites are SW1132A Enhanced Business Software Update.
- IPEE (Option 11E) Requires X11 Release 16 or higher. For X11 Release 20, then prerequisite is SW1132E Enhanced Business Software Update. For X11 Release 21, then prerequisites are SW1132E Enhanced Business Software Update, NTBK83BE or NTBK83BG Enhanced Business Software, NTBK83EE or NTBK83EG Enhanced Business Software-no DISA.
- IPEE (Option 11C) Requires X11 Release 16 or higher. For X11 Release 22, then prerequisites are NTSF8021 Enhanced Business Software Package and NTSF8029 Option 11/11E to Option 11C Release 2 Enhanced Business Software Upgrade - Includes MQA.
- IPEE (Options 21-81C) Requires X11 Release 17 or higher. For X11 Release 17, then prerequisites are SW0201B Basic ACD Features (ACD-A), SW0202C Advanced ACD Features (ACD-B), SW0203B ACD Reports (ACD-C1), SW0204A Load Management (ACD-C2), SW0205A ACD Link, and SW0206A MAX Report Enhancements. For X11 Release 18, then prerequisites are SW0221A ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 19, then prerequisites are SW0221B ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 20, 21, 22, then prerequisites are SW0221C ACD/Message Processing and SW0224A Enhanced Call Center Management.
- This upgrade to Meridian MAX Release 9 will result in the provision of MAX 9 software equivalent in feature content and capacity to the MAX 9 Enhanced software package. The number of asynchronous I/O channels and agent positions that will be supported will be determined by their respective numbers on the system to be upgraded.
- Enhanced software includes the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- Enhanced software includes MEI-Observe, which requires X11 Release 19 or later for Option 21-81C or X11 Release 20 or later for Option 11, 11E, 11C.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

- If currently running 155 MB data cassette tapes, three 600 MB data cassette tapes (A0605411) will be required.
- IPEE (Option 11) Requires X11 Release 16 or higher. For X11 Release 16 or 18, then prerequisites are SW1132A Enhanced Business Software Update.
- IPEE (Option 11E) Requires X11 Release 16 or higher. For X11 Release 20, then prerequisite is SW1132E Enhanced Business Software Update. For X11 Release 21, then prerequisites are SW1132E Enhanced Business Software Update, NTBK83BE or NTBK83BG Enhanced Business Software, NTBK83EE or NTBK83EG Enhanced Business Software-no DISA.
- IPEE (Option 11C) Requires X11 Release 16 or higher. For X11 Release 22, then prerequisites are NTSF8021 Enhanced Business Software Package and NTSF8029 Option 11/11E to Option 11C Release 2 Enhanced Business Software Upgrade - Includes MQA.
- IPEE (Options 21-81C) Requires X11 Release 17 or higher. For X11 Release 17, then prerequisites are SW0201B Basic ACD Features (ACD-A), SW0202C Advanced ACD Features (ACD-B), SW0203B ACD Reports (ACD-C1), SW0204A Load Management (ACD-C2), SW0205A ACD Link, and SW0206A MAX Report Enhancements. For X11 Release 18, then prerequisites are SW0221A ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 19, then prerequisites are SW0221B ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 20, 21, 22, then prerequisites are SW0221C ACD/Message Processing and SW0224A Enhanced Call Center Management.
- MAX 7 Fundamental on the IPE/IPEE will be upgraded to MAX 9 Fundamental on the IPE/IPEE, MAX 7 Enhanced on the IPE/IPEE to MAX 9 Enhanced on the IPE/IPEE, and MAX 7 Virtual on the IPE/IPEE to MAX 9 Virtual on the IPE/IPEE. The number of agent positions and number of asynchronous I/O ports provisioned in software for the IPE/IPEE will be the same as the number provisioned on the existing IPE/IPEE system to be upgraded.
- Enhanced software includes MEI-Observe, which requires X11 Release 19 or later for Option 21-81C or X11 Release 20 or later for Option 11, 11E, 11C.
- Virtual software includes MEI-Network, which requires X11 Release 19 or later for Option 21-81C or X11 Release 20 or later for Option 11, 11E, 11C.
- Both Enhanced and Virtual software includes the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

Meridian Terminal Emulator (MTE) Release 9.3 Software (Single User)	11; 11C; 11E; 21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX; Meridian MAX-CCR	W0/ S3

Notes:

- This package contains Meridian Terminal Emulator (MTE) Release 9 Software (multilingual) for use on a single supervisor PC workstation and one copy of the MTE Users Guide (multilingual). Software is supplied on 3.5", High-Density, IBM-compatible floppy disks.
- Requires Meridian MAX Release 5.27 (or later) software running on a MAX module.
- When used with Meridian MAX Release 7, the MAX module must be equipped with either Enhanced or Virtual level software.
- MTE Release 9 Software can be used with all three levels of Meridian MAX Release 8 and 9 Software: Fundamental, Enhanced, or Virtual.
- Supervisor PC workstation requirements: Microsoft Windows 3.1, Windows NT 3.5.1, or Windows 95.
- A supervisor PC workstation running MTE Release 9 Software can be connected to a Meridian MAX module through either one of its asynchronous ports (via a PC COM port) or by way of a Local Area Network (LAN). Network topology items, including PC Network Interface Cards (NIC) must be purchased separately.
- When a supervisor PC workstation is connected to the MAX module via a LAN, the network operating system must be compliant with Microsoft Windows Sockets 1.1 (the WINSOCK.DLL file must be loaded on the workstation).
- When the supervisor PC workstation is connected via a LAN to a MAX module running Meridian MAX Release 6 (or earlier) software, the MAX module must be equipped with the Meridian MAX LAN One-Time Connectivity Fee (SW0072A) and there must be one copy of the Meridian MAX Lan Connectivity Software (SW0073A) installed on the MAX module for each LAN based workstation. No separate LAN connectivity software is required in a MAX module to use MTE Release 9 software on a LAN with Meridian MAX Release 7, 8, or 9 Software.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.

Notes:

- This package contains Meridian Terminal Emulator (MTE) Release 9 Software (multilingual) upgrade for use on all supervisor PC workstations connected to a single Meridian MAX module for which a previous MTE System Package has been purchased and ten copies of the MTE Users Guide (multilingual). Software is supplied on a single set of 3.5", High-Density, IBM-compatible floppy disks. (This package is a per MAX upgrade license, not a site upgrade license.)
- Requires Meridian MAX Release 5.27 (or later) software running on a MAX module.
- When used with Meridian MAX Release 7, the MAX module must be equipped with either Enhanced or Virtual level software.
- MTE Release 9 Software can be used with all three levels of Meridian MAX Release 8 and 9 Software: Fundamental, Enhanced, or Virtual.
- Supervisor PC workstation requirements: Microsoft Windows 3.1, Windows NT 3.5.1, or Windows 95.
- A supervisor PC workstation running MTE Release 9 Software can be connected to a Meridian MAX module through either one of its asynchronous ports (via a PC COM port) or by way of a Local Area Network (LAN). Network topology items, including PC Network Interface Cards (NIC) must be purchased separately.
- When a supervisor PC workstation is connected to the MAX module via a LAN, the network operating system must be compliant with Microsoft Windows Sockets 1.1 (the WINSOCK.DLL file must be loaded on the workstation).
- When the supervisor PC workstation is connected via a LAN to a MAX module running Meridian MAX Release 6 (or earlier) software, the MAX module must be equipped with the Meridian MAX LAN One-Time Connectivity Fee (SW0072A) and there must be one copy of the Meridian MAX Lan Connectivity Software (SW0073A) installed on the MAX module for each LAN based workstation. No separate LAN connectivity software is required in a MAX module to use MTE Release 9 software on a LAN with Meridian MAX Release 7, 8, or 9 Software.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.

Meridian MAX-SNNE Release 9 Fundamental Software	21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-SNNE	S3

Notes:

- Requires one of the following hardware systems: NTJH15AA - Meridian MAX-SNNE System Hardware, AC Power - North America; NTJH15BA - Meridian MAX-SNNE System Hardware, DC Power - North America.
- Requires X11 Release 17 or later.
- For X11 Release 17, prerequisites are SW0201B Basic ACD Features, SW0202C Advanced ACD Features, SW0203B ACD Reports Features, SW0204A ACD Load Management, SW0205A ACD Link (MAX) and SW0206A MAX Report Enhancements.
- For Release 18/19/20/21/22, prerequisites are SW0221A ACD/Message Processing (Release 18 only), SW0221B ACD/Message Processing (Release 19 only), SW0221C ACD/Message Processing (Release 20 and above), SW0224A Enhanced Call Center Management, and SW0222A Enhanced ACD Overflow.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial munber must be provided when ordering this code as part of a Meridian MAX addition to an existing Meridian 1 system.

Description	System Compatibility	Product compatibility	W/S
Meridian MAX-IPEE Release 9 Fundamental Software	11; 11C; 11E; 21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-IPEE	S3

Notes:

- Requires one of the following hardware systems: NTJH17AA - Meridian MAX-IPEE Module (Option 11) - North America; NTJH17AA - Meridian MAX-IPEE Module (Option 21-81C) - North America.
- IPEE (Option 11) Requires X11 Release 16 or higher. For X11 Release 16 or 18, then prerequisites are SW1132A Enhanced Business Software Update.
- IPEE (Option 11E) Requires X11 Release 16 or higher. For X11 Release 20, then prerequisite is SW1132E Enhanced Business Software Update. For X11 Release 21, then prerequisites are SW1132E Enhanced Business Software Update, NTBK83BE or NTBK83BG Enhanced Business Software, NTBK83EE or NTBK83EG Enhanced Business Software-no DISA.
- IPEE (Option 11C) Requires X11 Release 16 or higher. For X11 Release 22, then prerequisites are NTSF8021 Enhanced Business Software Package and NTSF8029 Option 11/11E to Option 11C Release 2 Enhanced Business Software Upgrade - Includes MQA.
- IPEE (Options 21-81C) Requires X11 Release 17 or higher. For X11 Release 17, then prerequisites are SW0201B Basic ACD Features (ACD-A), SW0202C Advanced ACD Features (ACD-B), SW0203B ACD Reports (ACD-C1), SW0204A Load Management (ACD-C2), SW0205A ACD Link, and SW0206A MAX Report Enhancements. For X11 Release 18, then prerequisites are SW0221A ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 19, then prerequisites are SW0221B ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 20, 21, 22, then prerequisites are SW0221C ACD/Message Processing and SW0224A Enhanced Call Center Management.
- In order for Customer Controlled Routing support to function, SW0223A Enhanced ACD Routing (Release 18/19/20/21/22) or SW0210A (Release 17) is a prerequisite. Customer Controlled Routing hardware and application software are required for full CCR functionality. CCR is not supported on the Option 11 but is supported on the Option 11E and 11C.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial munber must be provided when ordering this code as part of a Meridian MAX addition to an existing Meridian 1 system.

Description	System Compatibility	Product compatibility	W/S
Meridian MAX-IPE/IPEE Release 9 Fundamental to Enhanced Feature Level Promotion	11; 11C; 11E; 21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-IPEE	S3

Notes:

- Order to add the capability of using all the features available with Meridian MAX Release 9 Enhanced Software.
- Customer must also order Meridian MAX Release 9 Reproduction/Keycode (P0885111). Keycode is provided with this package to use with customer's existing Meridian MAX Release 9 software tapes.
- This feature level promotion requires existing Meridian MAX-IPE or new MAX-IPEE hardware. If the upgrade uses existing MAX-IPE hardware, the MAX database size will be configured to either 90 MB or 250 MB, depending upon the size of the Hard Disk Drive (HDD) installed in the existing MAX-IPE Module. If the module contains either a 180 MB or a 240 MB HDD, then the database will be 90 MB. If the module contains a 1.2 GB HDD, then the database will be 250 MB. If the existing MAX-IPE Module contains either a 180 MB or a 240 MB HDD that is limited to the 90 MB database size but the larger 250 MB database size is desired, upgrade to an IPEE.
- If upgrading from a MAX-IPE to a MAX-IPEE order one of the following: NTJH93EA - IPE to IPEE Upgrade/Repair Kit #1 - Global; NTJH93FA - IPE to IPEE Upgrade/Repair Kit #2 - Global.
- IPEE (Option 11) Requires X11 Release 16 or higher. For X11 Release 16 or 18, then prerequisites are SW1132A Enhanced Business Software Update.
- IPEE (Option 11E) Requires X11 Release 16 or higher. For X11 Release 20, then prerequisite is SW1132E Enhanced Business Software Update. For X11 Release 21, then prerequisites are SW1132E Enhanced Business Software Update, NTBK83BE or NTBK83BG Enhanced Business Software, NTBK83EE or NTBK83EG Enhanced Business Software-no DISA.
- IPEE (Option 11C) Requires X11 Release 16 or higher. For X11 Release 22, then prerequisites are NTSF8021 Enhanced Business Software Package and NTSF8029 Option 11/11E to Option 11C Release 2 Enhanced Business Software Upgrade - Includes MQA.
- IPEE (Options 21-81C) Requires X11 Release 17 or higher. For X11 Release 17, then prerequisites are SW0201B Basic ACD Features (ACD-A), SW0202C Advanced ACD Features (ACD-B), SW0203B ACD Reports (ACD-C1), SW0204A Load Management (ACD-C2), SW0205A ACD Link, and SW0206A MAX Report Enhancements. For X11 Release 18, then prerequisites are SW0221A ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 19, then prerequisites are SW0221B ACD/Message Processing and SW0224A Enhanced Call Center Management. For X11 Release 20, 21, 22, then prerequisites are SW0221C ACD/Message Processing and SW0224A Enhanced Call Center Management.
- In order for Customer Controlled Routing support to function, SW0223A Enhanced ACD Routing (Release 18/19/20/21/22) or SW0210A (Release 17) is a prerequisite. Customer Controlled Routing hardware and application software are required for full CCR functionality. CCR is not supported on the Option 11 but is supported on the Option 11E and 11C.
- Enhanced software includes MEI-Observe, which requires X11 Release 19 or later for Option 21-81C or X11 Release 20 or later for Option 11, 11E, 11C.
- Enhanced software includes the capability to enable NAC Connectivity and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

Qty	Order code	Description	Qty	Order code	Description
3	S0005894	5 LAN Session Increment for MTE Release 9	1	S0005900	MAX CCR/EAR Reporting (CCR) for Meridian MAX Release 9

Description	System Compatibility	Product compatibility	W/S
Meridian MAX Release 9 Software Migration from MAX-SNN to MAX-SNNE	21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-SNNE	S1

Notes:

- Order when upgrading from any Meridian MAX Release 9 system running on MAX-SNN hardware to a MAX-SNNE Release 9 system.
- Requires the NTJH15DA hardware upgrade package from MAX-SNN to MAX-SNNE.
- Customer must also order Meridian MAX Release 9 Reproduction/Keycode (P0885111). Keycode is provided with this package to use with customer's existing Meridian MAX Release 9 software tapes.
- Fundamental level software includes support for 200 agent positions (minimum), support for 8 asynchronous I/O ports (minimum), Custom Calculator/Formula Definition, Configuration Control, Meridian Terminal Emulator (MTE) enabled, and 5 LAN Sessions.
- Virtual level software includes all items provided in Enhanced software plus support for 1000 agent positions (minimum), MSI, and MEI-Network (1 link).
- Requires X11 Release 17 or later.
- For X11 Release 17, prerequisites are SW0201B Basic ACD Features, SW0202C Advanced ACD Features, SW0203B ACD Reports Features, SW0204A ACD Load Management, SW0205A ACD Link (MAX) and SW0206A MAX Report Enhancements.
- For Release 18/19/20/21/22, prerequisites are SW0221A ACD/Message Processing (Release 18 only), SW0221B ACD/Message Processing (Release 19 only), SW0221C ACD/Message Processing (Release 20 and above), SW0224A Enhanced Call Center Management, and SW0222A Enhanced ACD Overflow.
- MAX 9 Fundamental on the SNN will be upgraded to MAX 9 Fundamental on the SNNE, MAX 9 Enhanced on the SNN to MAX 9 Enhanced on the SNNE, and MAX 9 Virtual on the SNN to MAX 9 Virtual on the SNNE. The number of agent positions and number of asynchronous I/O ports provisioned in software for the SNNE will be the same as the number provisioned on the existing SNN system to be upgraded.
- Enhanced level software includes all items provided in Fundamental software plus CCR/EAR MIS, Data Stream Reporting, NACD MIS, 60 LAN sessions, MEI-Observe (3 links), the capability to enable NAC Connectivity, and the capability to enable Multiple Queue Assignment.
- To enable MQA, order S0005901. MQA requires X11 Release 21 or later with SW0230A Multiple Queue Assignment.
- To enable NAC Connectivity, order S0005899.
- Hardware and software to support additional asynchronous I/O ports must be purchased separately. Software to support additional agent positions must be purchased separately.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

Description	System Compatibility	Product compatibility	W/S
Meridian MAX Release 9 Software Migration from MAX-IPE/IPEE Fundamental to MAX-SNNE Fundamental	21; 21A; 21E; 51; 51C; 61; 61C; 71; 81; 81C	Meridian MAX-SNNE	S3

Notes:

- Order when migrating from Meridian MAX-IPE hardware running MAX Release 9 Fundamental software to MAX-SNNE hardware running MAX Release 9 Fundamental software.
- Requires one of the following Meridian MAX-SNNE hardware system: NTJH15AA PDP-11, HP Vectra, MAX-IPE/IPEE to Meridian MAX-SNNE Hardware Upgrade, AC Power - North America; NTJH15BA PDP-11, HP Vectra, MAX-IPE/IPEE to Meridian MAX-SNNE Hardware Upgrade, DC Power - North America.
- Customer must also order Meridian MAX Release 9 Reproduction/Keycode (P0885111). Keycode is provided with this package to use with customer's existing Meridian MAX Release 9 software tapes.
- This migration will result in the provision of MAX 9 software for operation on MAX-SNNE hardware that is identical in feature content and capacity to the feature content and capacity of the MAX 9 software on the existing MAX-IPE platform to be upgraded but will provide for 200 agent positions (minimum) and 5 LAN sessions.
- If currently running 155 MB data cassette tapes, three 600 MB data cassette tapes (A0605411) will be required.
- Requires X11 Release 17 or later: For X11 Release 17, prerequisites are SW0201B Basic ACD Features, SW0202C Advanced ACD Features, SW0203B ACD Reports Features, SW0204A ACD Load Management, SW0205A ACD Link (MAX) and SW0206A MAX Report Enhancements. For Release 18/19/20/21/22, prerequisites are SW0221A ACD/Message Processing (Release 18 only), SW0221B ACD/Message Processing (Release 19 only), SW0221C ACD/Message Processing (Release 20 and above), SW0224A Enhanced Call Center Management and SW0222A Enhanced ACD Overflow.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.

- Requires an upgrade from one of the following hardware systems: MAX-SNN.
- Requires MAX Release 8 or later software. To upgrade MAX 8 to MAX 9, order one of the following software packages: NTJH01DA - Meridian MAX-SEE/SNN Release 5 or 6 to Meridian MAX-SNN/SNNE Release 9 Software Upgrade - Global; NTJH01EA - Meridian MAX-SNN Release 7 to Meridian MAX SNN/SNNE Release 9 Software Upgrade - Global; NTJH01FA - Meridian MAX-SNN/SNNE Release 8 to Meridian MAX SNN/SNNE Release 9 Software Upgrade - Global; NTJH12AA - Meridian MAX Release 9 Software Migration from Meridian MAX-SNN to Meridian MAX-SNNE - Global.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.
- The Meridian 1 Serial number must be provided when ordering this code.
- The NTJH16AA Peripheral Assembly contains one USRobotics 33.6 kbps External Modem; one NT7D47EA LAN Transceiver Cable (10 ft); one NT7D61EF SDI Cable (10 ft); one NT7D61EV SDI Cable (45 ft); three NT8D96BE 4-port Octopus Cables.

NTJH17AA

Description	System Compatibility	Product compatibility	W/S
Meridian MAX-IPEE Module (Option 11)	11; 11C; 11E	Meridian MAX-IPEE	W1

Notes:

- The NTJH18BA IPEE Peripheral Assembly contains one NT1R03HF Modem Cable, one USRobotics 33.6 kbps External Modem; one NT1R03AA 4-Port Octopus Cable W/Ethernet; one NT1R03BA 4-Port Octopus Cable.
- The Meridian 1 Serial number must be provided when ordering this code.
- One (MAX) maintenance console, one supervisor terminal, and one printer must be connected to MAX-IPEE asynchronous I/O ports. Additional supervisor terminals and printers can be connected through other asynchronous I/O ports or through the LAN.
- The MAX maintenance console and all supervisor terminals must be 100% compatible with VT200 terminal specifications.
- Requires one of the following software packages: NTJH02AA - ACD-D to Meridian MAX-IPEE Release 9 Software Upgrade - Global; NTJH02BA - ACD-MAX to Meridian MAX-IPEE Release 9 Software Upgrade - Global; NTJH02CA - Meridian MAX Release 3 or 4 to Meridian MAX-IPEE Release 9 Software Upgrade - Global; NTJH11AA - Meridian MAX-IPEE Release 9 Fundamental Software - North America; NTJH11BA - Meridian MAX-IPEE Release 9 Enhanced Software - North America; NTJH11CA - Meridian MAX-IPEE Release 9 Virtual Software - North America.
- The A0669467 IPEE module occupies 3 consecutive card slots in the IPE shelf of a Meridian 1, Option 11 main or expansion cabinet.
- Includes 8 asynchronous I/O ports and the capability to connect to a LAN.
- Devices that connect to MAX-IPEE asynchronous I/O ports (the MAX maintenance console, supervisor terminals, and printers) require straight-through, RS-232 type cables. Cables of various lengths and connector gender are available. For male-to-male connections, order NT1R03DB, DC, DF, DP, or DV (for 2, 4, 10, 25, or 45 ft. lengths, respectively). For male-to female connections, order NT1R03EB, EC, EF, EP, or EV (for 2, 4, 10, 25, or 45 ft. lengths, respectively).
- The High-Speed Link (HSL) and the Load Management Link (LML) connection at the Option 11 require one NTAK19AA cable (an NTAK19BA may be used instead). Both of these cables are equipped with the Option 11 system. If additional cable length is required, order NT1R03DX cables (one for each link) for connection between the NTAK19AA (or BA) cable and the NT1R03BA octopus cable.
- For detailed information on system ordering and configuration, consult the Meridian MAX Release 9 Ordering Procedures available from your Nortel representative.

Meridian NAC-AM Release 2.5 Upissue/ Software Replacement			W0/ S3

Notes:

- Meridian NAC 2.5 software is Year 2000 compliant.
- Meridian NAC Software Service Transaction Fee (AM) P0889406 must be ordered with this package.
- Order this package to upissue from NAC 2.16 software or to replace lost or damaged NAC 2 media. Only NAC 2.5 software will be shipped. Not for upgrading from NAC 1 to 2.5.
- Requires NAC 2 Application Module Hardware.
- Requires MTE Release 9 Software if using PCs for supervisor terminals.
- Requires one (1) NT7D47EA LAN Transceiver Cable (10 ft). If you are upissuing from NAC 2.16 software, order this cable to be able to connect supervisor PCs running MTE 9 or later software and printers via a LAN.
- Nortel Networks recommends implementation of a backup strategy using a minimum of three tapes. Order individual 600 Mbyte tapes (blank) using code A0605411.
- The Meridian 1 Serial number must be provided when ordering this code.

Description	System Compatibility	Product compatibility	W/S
MAX-IPE to IPEE Upgrade Kit #2		Meridian MAX-IPEE	W1/ S1

Notes:

- This kit is for customers with a MAX-IPE Module (A0617009 or A0617010) that need to upgrade it to a MAX-IPEE.
- Advisement: It may not be necessary to order this MAX-IPE to MAX-IPEE Upgrade Kit if the existing MAX-IPE already supports a 250-Mbyte database. Meridian MAX-IPE modules with part numbers A0617009 or A0617010 that were shipped new from the factory before December 1995 contain 240-MByte hard disk drives and therefore, can only support 90-Mbyte databases. Thus, this upgrade kit should be ordered to upgrade such earlier modules to an IPEE configuration. However, new MAX-IPE modules with these part numbers that were shipped after November 1995 will support 250-Mbyte databases. These later modules contain 1-Gbyte hard disk drives and are already MAX-IPEE-Ready. This upgrade kit is not required for these later modules.
- When ordering, the customer must supply the Meridian 1 PBX serial number and must order code SERV0017 for MAX 8 and earlier or P0885111 for MAX 9 software to obtain a new keycode.
- Customers on MAX 4.62 or MAX 5 will need to upgrade to either MAX 6.31 (order SW7514B) or to the current release of Meridian MAX software.
- Customers on MAX 6.22 will need to upgrade to 6.31 (order NTJH91AA).
- The Meridian 1 Serial number must be provided when ordering this code.

Description	System Compatibility	Product compatibility	W/S
Journal Call Accounting Software with Billing			S1

Notes:

- Journal is a PC-based Call Accounting Software package which is provided on a CDROM, and runs on Windows 95/98, and Windows NT operating systems. Please refer to the Journal User Guide P0885219 for minimum PC requirements.
- IMPORTANT CUSTOMER ORDER INFORMATION: It is important to include the following information with your Journal Software order:
- 1. The correct Hotel Name and Telephone Number must be provided in order to obtain accurate Rate Table information.
- 2. In addition, please specify if Time of Day Discounts would be used at the hotel. ie. Time of Day Discount: Yes / No.
- The Time of Day Discount relates to different rates charged to guests depending on when the phone call is made. This feature may depend on the hotelscustomerpolicies.Thereisnoadditionalchargeforthisfeature.'
- The System Site ID must be provided when ordering this package for an existing Meridian system.

Notes:

- The NTSF1031 (Option 11C Mini Supporting Fiber Expansion Package) or the NTSF1033 (MSC to SSC upgrade package) is a prerequisite for connecting this expansion package from a Mini Main Chassis.
- This package comes equipped with a 48-port digital line card in slot 4.
- The Small System Controller fiber transmitter daughterboard must be purchased separately (either NTDK23 - single port, or NTDK85 - dual port) if necessary.
- This package can be used in place of an Option 11C Expansion Cabinet, to expand an Option 11C system (Release 22 to current).

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII New System Package AC (Fiber Network Fabric Included)	81C X11 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (368) Call Processor PII, NTS103AA (365) Fiber Network Software Package, SW0013A (299) Option 81C Software Package.
- The maximum number of network groups supported on Option 81C and the fiber network fabric is eight groups with X11 Release 25 or later software.
- This package is equipped with two (2) network groups. Additional groups may be ordered using the Fiber Network Group Expansion Package, NTHY20AC, or the Fiber Network Group Column Package, NTHY24AC.
- This package contains two NT4N65 cards and the cabling associated with them that provide CNI to 3PE connections for the first two network groups. This package also contains cCNI Transition Cards, NT4N66, which will support up to eight network groups with the Fiber Network Fabric. Note that additional networks groups, beyond the first two included in this package, require the purchase of two NT4N65 cards which will support two additional network groups. These can be ordered separately. In addition, four NT8D76 cables must be ordered separately for each additional network group.
- Clock controllers are not included in this package and must be ordered separately. Two (2) QPC471'H' vintage or later must be ordered.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-by-side must be ordered separately.
- One NT8D21AB Ringing Generator AC must be added for each IPE Module in which analog type peripheral cards are to be used. Otherwise, one NT7D05AA Filler Panel-Ringing Generator must be equipped.
- This package includes sixteen NT8D81AA Tip and Ring Cables within the IPE Module.

NTSZ26AC

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII New System Package AC (IGS Network Included)	81C 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (368) Call Processor PII and SW0013A (299) Option 81C Software Package.
- The maximum number of network groups supported on Option 81C systems that are equipped with the Intergroup Module (IGM) and IGS or DIGS cards is five with X11 Release 25 or later software.
- Fiber Network Fabric Hardware and Software Option 365 cannot co-exist on Option 81C systems equipped with Call Processor PII hardware and CP PII Software Option 368. Fiber Network Fabric and Call Processor PII are mutually exclusive at this time.
- The junctor board in the Junctor Module requires Quantity 4 QPF36 Terminating Plugs for each unequipped network group and must be ordered separately.
- This package is equipped with two (2) network groups. Additional IGS based network groups may be ordered using QCA6645 Network Group Assembly Package AC.
- This package contains two NT4N65 cards and the cabling associated with them that provide CNI to 3PE connections for the first two network groups. This package also contains cCNI Transition Cards, NT4N66, which will support up to eight network groups with the Fiber Network Fabric. Note that additional network groups, beyond the first two included in this package, require the purchase of two NT4N65 cards which will support two additional network groups. These can be ordered separately. In addition, four NT8D76 cables must be ordered separately for each additional network group.
- This package does not include clock controllers which must be ordered separately. Two (2) QPC471'H' vintage or later must be ordered.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides of modules and to connect modules side-by-side must be ordered separately.
- One NT8D21AB Ringing Generator AC must be added for each IPE Module in which analog type peripheral cards are to be used. Otherwise, one NT7D05AA Filler Panel Ringing Generator must be equipped.
- This package includes sixteen (16) NT8D81AA Tip and Ring Cables within the IPE Module.

Description	System Compatibility	Product compatibility	W/S
Option 81C Call Processor PII New System DC (IGS Network Included)	81C 3311 R25		W1

Notes:

- This Option 81C package requires the following feature packages be enabled: NTS101AA (368) CP PII and SW0013A (299) Option 81C Software Package.
- The maximum number of network groups supported on Option 81C systems that are equipped with Intergroup Modules (IGM) and IGS or DIGS cards is five with X11 Release 25 or later software.
- Fiber Network Fabric hardware and Fiber Network Fabric Software Option 365 cannot co-exist on Option 81C systems with CP PII hardware and CP PII Software Option 368. Fiber Network Fabric and CP PII are mutually exclusive on the same system at this time.
- The Junctor Board in the Junctor Module requires four QPF36 Terminating Plugs for each unequipped network group and must be ordered separately.
- This package is equipped with two (2) network groups. Additional groups may be ordered using the AS1039D Network Group Assembly Package DC.
- This package contains two (2) NT4N65 cards that provide CNI to 3PE connections for the first two network groups. This package also contains cCNI Transition Cards, NT4N66, which can support up to eight network groups with the Fiber Network Fabric. Additional network groups require the purchase of two NT4N65 cards which support two additional groups. These are ordered separately. In addition, four (4) NT8D76 cables must be ordered separately for each additional network group.
- This package does not include clock controllers. Two (2) QPC471'H' or later vintage must be ordered separately.
- One NT6D42CD Ringing Generator DC must be added for each IPE Module in which analog type peripheral cards are to be used. Otherwise, one NT7D05AA Filler Panel Ringing Generator must be equipped.
- Additional NT9D18AA Module Side Covers and NT8D49AA Column Spacer Kits to cover all exposed sides and to connect modules side-by-side must be ordered separately.
- This package includes sixteen (16) NT8D81AA Tip and Ring Cables within the IPE Module.
