Note: Information on EC Directives

Individual OMRON products that comply with EC Directives conform to the common emission standards of EMC Directives. However, the emission characteristics of these products installed on customers' equipment may vary depending on the configuration, wiring, layout, and other conditions of the control panel used. For this reason, customers are requested to check whether the emission characteristics of the entire machine or equipment comply with the EMC Directives.

Configuration Guidelines

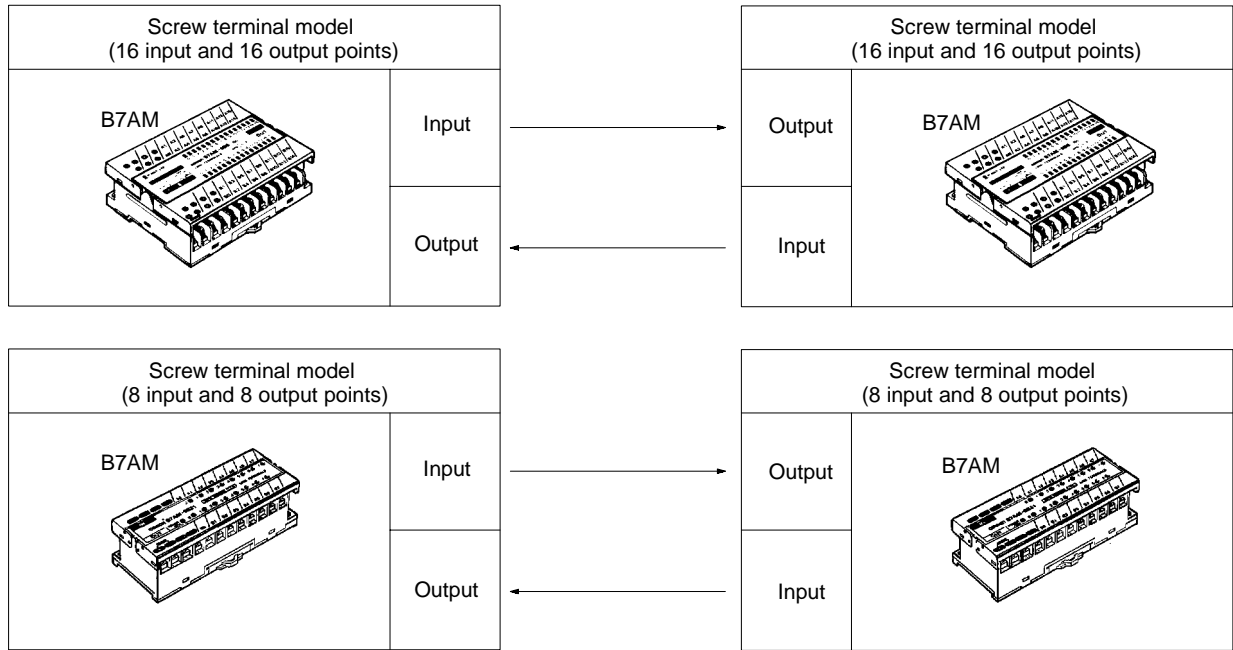

■ 16-POINT TRANSISTOR I/O LINK MODULES

Note: The I/O delay time values of 16-point Link Terminals with Adapters are either 3 ms (typical, for high-speed models) or 19.2 ms (typical, for normal-speed models). Use a combination of an Input and an Output Link Terminal with the same I/O delay time. Connect two 32-point Link Terminals with Adapters together or a 32-point Link Terminal with an Adapter to two 16-point Link Terminals.

MIXED I/O LINK MODULES

16 Inputs/16 Output or 8 Inputs/8 Outputs

Note: The Mixed I/O Link Terminals are either 3 ms (typical, for high-speed models) or 19.2 ms (typical, for normal-speed models). Use a combination of an Input and an Output Link Terminal with the same transmission speed (I/O delay time).

10-POINT TRANSISTOR I/O LINK MODULES

Note: The 10-point model has a normal I/O delay of 19.2 ms (typical); 10-point models with short I/O delay are not available. The transmission signals of the 16-point Link Master Adapters are not compatible with those of the 10-point model. The 16-point Link Master Adapter models and 10-point models cannot be used in combination.

NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.
