C200H-TM001

General Information

The analog timer module lets the user adjust timer values without going into the program. The module has four independently set and monitored timers that each have variable ranges. The user may select, by DIP switch, for each point to use front panel variable resistor or external variable resistors. Through internal bit allocation, each timer can be started and paused, allowing for them to be used as cumulative timers.

Features

- ◆ Four front panel variable resistors are used to set the timers
- ◆ Connections available for external variable resistors
- ◆ Indicators show operation and time-up status
- ◆ Cumulative timer available using pause bits

Specifications

Part number	C200H-TM001
Number of timers	4
Time setting range (DIP switch selectable)	Use the DIP switches to set any of the following 4 ranges: 0.1 to 1 second (typical) 1 to 10 seconds (typical) 10 to 60 seconds (typical) 1 to 10 minutes (typical)
Indicators	SET and TIME UP
Timer pause function	Timing can be paused if specified by program. The timers can be used as cumulative timers.
External variable resistor	External variable resistors can be used to set the time value when the IN/EXT selector is set to EXT.
Manual	C200H Installation Guide: W111
