6U Terminal Block/Breakout Board with Encoder Opto-Isolation

Accessories Page | Get Manual
Ordering Information | Features and Options

Part Number: 602604

Features & Options

This accessory is a combination of the features provided by the ACC-8D Option 6 and the ACC-8D in a 6U format.

This accessory provides a convenient means for routing PMAC's JMACH connector signals and power supply lines to terminal blocks or D-subs connectors. The D-subs connectors provided by ordering the Option-1 are compatible with Allen Bradley servos. The terminal blocks provided by ordering Option-2 are monolithic by axis. This board also provides the capability to optically isolate the four incremental encoders from PMAC's digital circuitry. This can be important for signal integrity in noisy environments. (Usually, differential signals and cable shielding are tried first.) Because the encoders are isolated from PMAC, a separate 5V-power supply is required for the encoders.

Options:

- Option-1: D-Sub connectors to machine
- Option-2: Terminal block connectors to machine
