PMS Aerosol

mini LAZ Portable Particle Counter

Portable Counter Monitors Environment Efficiently

PMS' portable aerosol particle counter, Model miniLAZ, is designed specifically for cleanroom applications. It is lightweight in construction and has a small footprint to allow for easy handling within the facility. The miniLAZ is a five channel unit and offers particle sensitivity at 0.3 or 0.5 microns at a high flow rate of 1 CFM. A back-lit LCD uses a touch screen front panel to input and display data with pop-up menu options to simplify the instrument's operations. Software functions include Federal Standard 209E calculations and settable alarm limits. Particle information is presented as either raw or normalized counts per cubic feet or meters. Up to 500 samples can be stored and ported to a spreadsheet program for post processing.

Standard features on the miniLAZ include two 4-20 mA inputs for environmental sensors and two serial ports. The miniLAZ operates using line or battery power. Also available is a *touch memory* wand for scanning predetermined locations within the cleanroom.
