

Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

*InstraView*SM REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at www.instraview.com ↗

WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. www.artisanng.com/WeBuyEquipment ↗

General Information

These models are dual channel high-speed A/D converter boards which operate at sampling rates up to 70 MHz. They are single-slot VMEbus boards, and include signal conditioning and clock generation circuitry. The two channels are identical and operate from the same sample clock.

Among their other uses, these models are intended as front ends for Pentek's Digital Receivers and the Model 6099A Buffer Memory. Connections between the A/Ds and the receivers or buffer memory are made with standard 80-conductor 0.025 in. pitch flat ribbon cable (68-conductor cable in Model 6472) using the mating connectors supplied. Complete cable assemblies are also available from Pentek.

Signal Conditioning

All models, except the 6402, accept a ± 1.0 V full scale analog input signal from a front panel SMA connector with 50 ohm input termination. Model 6402 accepts ± 5.0 V full scale signal with 100 kohm input termination.

A buffer amplifier then delivers the signal to a high-order Chebyscheff low pass anti-aliasing filter, which restricts input bandwidth to approximately 40% of the maximum sampling rate of each model. Other filter characteristics are available on special order.

For systems in which the input signal is already bandlimited, the on-board anti-aliasing filter can be bypassed.

A/D Conversion

The A/D converter resolution and maximum sampling frequency depend on the model. In summary, the available resolutions and frequencies are as follows:

Model	Resolution	Frequency
6402	16 bits	250 kHz
6410	14 bits	10 MHz
6420	14 bits	20 MHz
6441	12 bits	41 MHz
6465	12 bits	65 MHz
6472	10 bits	70 MHz

Digitized data from both channels are available on each of two front panel connectors. Two separate sets of drivers are provided for each channel to support more flexible connections to different configurations of digital receivers.

Sampling Control

The sample clock generator includes a crystal oscillator set at the maximum sampling frequency of each model. Model 6472 has 25 and 50 MHz crystal oscillators, in addition to 70 MHz. All oscillators are in standard DIP packages and are easily replaceable by the user for special frequency requirements.

An external sample clock can also be supplied through a front panel SMA connector. Selection of any of the internal oscillators or the external clock is made with on-board jumpers.

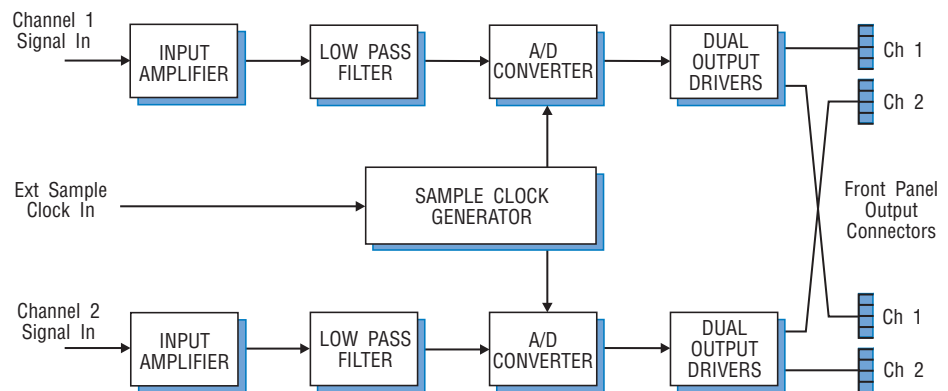

VME Interface

The VMEbus interface is used only for power and no VMEbus signals are used on the board. ➤

Features

- Front ends for Pentek Digital Receivers
- Front ends for Pentek 6099A Buffer Memory
- Front panel TTL, ECL, or FPDP outputs compatible with Pentek receivers
- Shielded construction reduces noise
- Internal or external sampling clocks to 70 MHz
- Single slot 6U VMEbus boards

Block Diagram, All Models

Ordering Information

Model	Description
6402	2-Channel 250 kHz 16-bit A/D Converter, TTL outputs
Options:	
-002	ECL outputs; Input: ± 1.0 V full scale
-008	FPDP outputs
6410	2-Channel 10 MHz 14-bit A/D Converter, TTL outputs
Options:	
-008	FPDP outputs
-002	ECL outputs
6420	2-Channel 20 MHz 14-bit A/D Converter, TTL outputs
Option:	
-008	FPDP outputs
6441	2-Channel 41 MHz 12-bit A/D Converter, TTL outputs
Options:	
-002	ECL outputs
-008	FPDP outputs
6465	2-Channel 65 MHz 12-bit A/D Converter, ECL outputs
Option:	
-008	FPDP outputs
6472	2-Channel 70 MHz 10-bit A/D Converter, ECL outputs
Option:	
-009	± 1.0 V full scale input

► Specifications, Model 6402

Input: single-ended ± 5.0 V full scale,
100 kohm input impedance
Anti-aliasing filter: DC to 100 kHz, ± 2.0 dB
passband flatness, 150 kHz stopband with
> 50 dB attenuation; may be bypassed
A/D converter: 16 bits, 250 kHz max. sample
rate (ADS7811); harm. distortion < -85 dB,
SINAD > 80 dB, spurious < -80 dB
Sampling clock: internal 8 MHz crystal
oscillator with divider; user installable
DIP TTL/ECL oscillator; external TTL
clock through front panel SMA connector

Specifications, Model 6410

Input: single-ended, ± 1.0 V full scale,
50 ohm input impedance
Anti-aliasing filter: DC to 4 MHz, ± 2.0 dB
passband flatness, 5.5 MHz stopband with
> 50 dB attenuation; may be bypassed
A/D converter: 14 bits, 10 MHz max.
sample rate (Edge Technology ET2471);
SNR > 67 dB, SINAD > 65 dB, spurious
components -80 dB
Sampling clock: internal 10 MHz crystal
oscillator, or user installable DIP TTL/ECL
oscillator; external TTL clock through
front panel SMA connector

Specifications, Model 6420

Input: single-ended, ± 1.0 V full scale,
50 ohm input impedance
Anti-aliasing filter: DC to 8 MHz, ± 2.0 dB
passband flatness, 12 MHz stopband with
> 50 dB attenuation; may be bypassed
A/D converter: 14 bits, 20 MHz max.
sample rate (Edge Technology 2473);
SNR > 75 dB, SINAD > 72 dB, spurious
components < -80 dB
Sampling clock: internal 20 MHz crystal
oscillator, or user installable DIP TTL oscil-
lator; external TTL clock through front
panel SMA connector

Specifications, Model 6441

Input: single-ended ± 1.0 V full scale,
AC-coupled with 10 kHz high-pass cutoff,
50 ohm input impedance
Anti-aliasing filter: DC to 16 MHz, ± 1.0 dB
passband flatness, 24 MHz stopband with
> 50 dB attenuation; may be bypassed
A/D converter: 12 bits, 5 MHz to 41 MHz
sample rate (AD 9042); SNR > 50 dB,
SINAD > 60 dB, spurious components
 -70 dB
Sampling clock: internal 40 MHz crystal
oscillator, or user installable DIP TTL oscil-
lator; external TTL clock through front
panel SMA connector

Specifications, Model 6465

Input: single-ended ± 1.0 V full scale, AC-
coupled with 10 kHz high-pass cutoff,
50 ohm input impedance
Anti-aliasing filter: DC to 26 MHz, ± 1.0 dB
passband flatness, 38 MHz stopband with
> 50 dB attenuation; may be bypassed
A/D converter: 12 bits, 5 MHz to 65 MHz
sample rate (AD 6640); SNR > 50 dB,
SINAD > 60 dB, spurious components
 -70 dB
Sampling clock: internal 64 MHz crystal
oscillator, or user installable DIP TTL oscil-
lator; external TTL or sine (2.0 V p-p)
clock through front panel SMA connector

Specifications, Model 6472

Input: single-ended, ± 1.75 V full scale,
50 ohm input impedance
Anti-aliasing filter: DC to 30 MHz,
 ± 1.0 dB passband flatness, 45 MHz
stopband with > 50 dB attenuation;
may be bypassed
A/D converter: 10 bits, 70 MHz max.
sampling rate (AD 9060); harmonic
distortion < -59 dBc, IM distortion
 < -70 dBc, SNR > 55 dB
Sampling clock: internal 25, 50, and
70 MHz crystal oscillator, or one of
three user-installable DIP ECL oscilla-
tors; external TTL, ECL or sine
(1.0 V RMS) clock through front panel
SMA connector

Specifications, all Models

Power: 1.0 A at +5 V; 0.75 A at +12 V;
1.0 A at -12 V
Size: standard 6U VMEbus board, single
slot; board 160 mm (6.3 in.) x 233.5 mm
(9.2 in.), panel 0.8 in. wide
