QuantaMaster™ 50

NIR with InGaAs Spectrofluorometer

The QuantaMaster™ fluorescence spectrofluorometer series from Photon Technology International offers high performance and the flexibility of PTI's modular "Open Architecture" design.

The QuantaMaster™ 50 NIR steady state spectrofluorometer is based on TE-cooled InGaAs detectors. Its sensitivity is enhanced by using an optical chopper to modulate the excitation light and a lock-in amplifier on the detector end. Together with PTI's FelixGX software, the QuantaMaster™ 50 will meet your highest demands and be welcomed in a multiple user environment as well. So, whether you are a beginner, or an experienced fluorescence spectroscopist, the QuantaMaster™ 50 is designed to meet all of your needs and your budget!
