Racal Instruments™ 1260-111/111A

High-Power Reed Form A/B Plug-In

The Racal Instruments™ 1260-111/A is a high-voltage/current-dry reed relay that is rated for 1,000,000 operations at a 60 W load. This card is optimized for high-voltage/current switching applications, and can be mixed and matched with other cards in the 1260-1XX family to create application-specific configurations.

Key Features

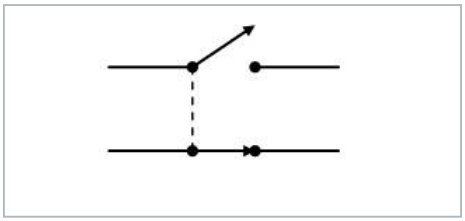

- **Twelve form A and 12 form B independent dry-reed relays**
- **Up to one million operations at full-rated load**
- **Switches up to 1000 VDC/VAC$_{pk-pk}$**
- **Carry- or hot-switch 2 A and up to 60 W**
- **Ideal for high-voltage/current/density switching systems**
- **Standard Adapt-a-Switch™ plug-in designed for ease of replacement**

Product Information

The 1260-111/A, like all 1260-1XX series cards, can be used in either the 1260-100 Adapt-a-Switch™ Carrier for VXIbus or the 1256 Switching Chassis for GPIB/RS232 applications. Up to 72 form A/B relay channels will fit in a 1260-100 Carrier, while up to 96 will fit in a single 1256.

When used with the 1260-100 Adapt-a-Switch™ carrier, the 1260-111 requires a Racal Instruments™ Option 01T to communicate with the switch cards. This option additionally provides message-based operation for ease-of-use and register-based operation for maximum speeds. When used with the 1256 mainframe, no additional controller is required.

The Adapt-a-Switch™ line includes drivers for LabWindows™/CVI and LabVIEW™ for VXI applications. It also includes VXI*plug&play* support for frameworks based on Microsoft Win32® application programming interface.
