Relay Actuator Module Model 1260-16

- ◆ **Ideal for General-purpose Switching and Control of External Devices**
- ◆ **Each Channel Switches up to 5A and 30 VDC or 250 VACrms**
- ◆ **Individual Relays can be Easily Configured to Meet User-defined Network Requirements**
- ◆ **High Density, Configured as 40 Channels of Independent SPDT Switches**

The Model 1260-16 is designed for general purpose signal switching and control of external devices. The module provides 40 channels of SPDT switches. Custom relay switch networks may be configured with some relays while all remaining channels continue independent operation.

The actuator module permits switching up to 5 amps at 30 VDC or 250 VACrms per channel. Higher DC voltage may be switched at lower currents.

The Model 1260-16 module has provision for adding a fuse or components for surge suppression.

Relay coils are monitored to provide user selectable confidence checking, which gives the user additional assurance of proper relay operation.

The 1260-16 is controlled by the Option 01 message-based interface which is explained in detail on the Smart Card Module page. All 1260 control features explained on that page are available to this module.
