WARRANTY STATEMENT

All Racal Instruments, Inc. products are designed and manufactured to exacting standards and in full conformance to Racal's ISO 9001 procedures.

For the specific terms of your standard warranty, or optional extended warranty or service agreement, contact your Racal customer service advisor. Please have the following information available to facilitate service.

1. Product serial number
2. Product model number
3. Your company and contact information

You may contact your customer service advisor by:

E-Mail:	Helpdesk@racalinstruments.com	
Telephone:	+1 800 722 3262	(USA)
	+44(0) 8706 080134	(UK)
	+852 2405 5500	(Hong Kong)
Fax:	+1 949 859 7309	(USA)
	+44(0) 1628 662017	(UK)
	+852 2416 4335	(Hong Kong)

RETURN of PRODUCT

Authorization is required from Racal Instruments before you send us your product for service or calibration. Call your nearest Racal Instruments support facility. A list is located on the last page of this manual. If you are unsure where to call, contact Racal Instruments, Inc. Customer Support Department in Irvine, California, USA at 1-800-722-3262 or 1-949-859-8999 or via fax at 1-949-859-7139. We can be reached at: helpdesk@racalinstruments.com.

PROPRIETARY NOTICE

FOR YOUR SAFETY

Before undertaking any troubleshooting, maintenance or exploratory procedure, read carefully the **WARNINGS** and **CAUTION** notices.

This equipment contains voltage hazardous to human life and safety, and is capable of inflicting personal injury.

If this instrument is to be powered from the AC line (mains) through an autotransformer, ensure the common connector is connected to the neutral (earth pole) of the power supply.

Before operating the unit, ensure the conductor (green wire) is connected to the ground (earth) conductor of the power outlet. Do not use a two-conductor extension cord or a three-prong/two-prong adapter. This will defeat the protective feature of the third conductor in the power cord.

Maintenance and calibration procedures sometimes call for operation of the unit with power applied and protective covers removed. Read the procedures and heed warnings to avoid “live” circuit points.

Before operating this instrument:

1. Ensure the instrument is configured to operate on the voltage at the power source. See Installation Section.

2. Ensure the proper fuse is in place for the power source to operate.

3. Ensure all other devices connected to or in proximity to this instrument are properly grounded or connected to the protective third-wire earth ground.

If the instrument:

- fails to operate satisfactorily
- shows visible damage
- has been stored under unfavorable conditions
- has sustained stress

Do not operate until performance is checked by qualified personnel.

NOTE FOR SYSTEMS WITH 1260-OPT 01T

The “Module-Specific Syntax” section of this manual shows the command syntax for the 1260-01S Smart Card. If you are using the newer 1260-01T Smart Card, the commands will NOT work as shown.

Consult the 1260-01T Manual for a description of the commands that may be used with the 1260-01T Smart Card.

The channel numbers described in this manual are valid for the 1260-01T. The channel numbers continue to be used for the 1260-01T.

The syntax of the commands that use channel numbers has changed for those cards controlled by the 1260-01T.

The new syntax used to close a channel is:

CLOSE (@ <module address> (<channel>))

For example, for a relay module whose <module address> is set to 7, closing <channel> 0 is performed with the command:

CLOSE (@7 (0))

Using the older 1260-01S, the command would be (as shown in this manual):

CLOSE 7.0

Many other command syntax differences exist. Please consult chapter 2 of the 1260-01T manual for a description of the commands that are available for the 1260-01T.

Control Information for the 1260-18

The following information describes the control-register-to-relay-channel mapping for a 1260-18 Relay Module. This information may be used to control a 1260-18 when using a 1260-01T in the register-based mode of operation.

Each relay on this module is controlled by setting or clearing a single bit within a Control Register. Control Registers on the module operate 8 channels simultaneously. There are eight control bits per Control Register. Setting the bit to a 1 closes the relay; setting the bit to a 0 opens the relay.

The table below shows the mapping from logical channels to control bits. The logical channels are used when operating the relay module in message-based mode. The control bits within the Control Registers are used to operate the module in register-based mode.

Each Control Register is located 2 addresses from the previous Control Register. That is, each Control Register is located at an odd address. This is shown in Table 2-2 of the 1260-01T manual. Control Register 0 is located at the “Base A24 Address” for the module. Consult the “Register-Based Operation” Section of Chapter 2 of the 1260-01T manual for a description of calculating control register addresses

Chapter 1

MODULE SPECIFICATION

Module Specification

The 1260-18 high density basic switch is a 152 channel single-wire device capable of being configured in many ways. For example, it can be configured as 152 SPST switches, or 76 SPDT switches, or 50 SP3T switches, etc. It can also be configured as any combination of switches. For example, it could have 10 SP8T's, 5 SP6T's, 10 SP2T's and 22 SPST's.

Safety

Refer to the "**FOR YOUR SAFETY**" page preceding the Table of Contents. Follow all **NOTES, CAUTIONS** and **WARNINGS** to ensure personal safety and prevent damage to the instrument.

Product Support

Racal Instruments has a complete Service and Parts Department. If you need technical assistance or should it be necessary to return your product for servicing, call 1-800-722-3262 or 1-949-859-8999 and ask for Customer Support. You may also contact Customer Support via E-Mail at:

helpdesk@racalate.com

If parts are required to repair the product at your facility, call 1-800-722-3262 or 714-859-8999 and ask for the Parts Department.

When sending your instrument in for repair, complete the form in the back of this manual and enclose it with the instrument.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Chapter 2

INSTALLATION INSTRUCTIONS

Unpacking and Inspection

1. Before unpacking the switching module, check the exterior of the shipping carton for any signs of damage. All irregularities should be noted on the shipping bill.
2. Remove the instrument from its carton, preserving the factory packaging as much as possible.
3. Inspect the switching module for any defect or damage. Immediately notify the carrier if any damage is apparent.
4. Have a qualified person check the instrument for safety before use.

CAUTION

Proper ESD handling procedures must always be used when packing, unpacking or installing any 1260 Series cards. Failure to do so may cause damage to the unit.

Reshipment Instructions

1. Use the original packing material when returning the switching module to Racal Instruments for calibration or servicing. The original shipping carton and the instrument's plastic foam will provide the necessary support for safe reshipment.
2. If the original packing material is unavailable, wrap the switching module in ESD Shielding and use plastic spray foam to surround and protect the instrument.
3. Reship in either the original or a new shipping carton.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Option 01 Installation

Installation of the Option 01 to the 1260-18 is described in the Installation section of the 1260 Series VXI Switching Cards Manual, under the Option 01 installation section..

Module Installation

Installation of the 1260-18 Switching Module into a VXI mainframe, including the setting of switches SW1-1 through SW1-4, SW2 and SW3, is described in the Installation section of the 1260 Series VXI Switching Cards Manual. Configuration of switches SW1-5 and SW1-6 must be configured in the OFF state.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Chapter 3
MODULE OPERATION

Module Configuration

The 1260-18 is a 152 channel single wire module consisting of 152 individual SPST relay switches. These individual relays allow the 1260-18 module to be configured via software in any configuration from 152 - SPST's to 1 - 152PST or any combination thereof (by use of include command) without the use of hardware jumpers. This is the same as being automatically configurable as a 1-wire, 2-wire, ... n-wire switch.

Reference should be made to **Figure 3-1**, 1260-18 Module Configuration Block Diagram

Front Panel Connectors

The 1260-18 front panel connectors are labeled J200 and J201. The connector type is 5 x 32 (160-pin) DIN 41 612 male. **Figure 3-2** shows the pin numbering. Signal ground pins are provided for terminating shields and to allow the use of coaxial cable when using higher frequency signals (i.e., above 10MHz). The mapping of channel numbers to connector pins and the available mating connector cable is given in **Table 3-1**.

Mating Connectors

Mating connectors are available for the 1260-18 module. Racal Instruments also offers the following accessories for mating connectors (see ordering information for part numbers):

- 160-Pin Connector Kit w/ backshell and pins P/N 407407
- 160-Pin Cable Assy, 6ft, 24GA P/N 407408
- 160-Pin Cable Assy, 12ft, 24GA P/N 407409

The 160-Pin Connector kit consists of a connector housing, customized backshell and 170 crimp pins. The backshell design has been optimized for system integration. The connector kit has been designed for 22 to 26 gauge cable. The crimp pin will lock or 'click' into the connector housing only when installed correctly. The assembler should ensure that the crimp pin is locked by tugging

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

on the cable after insertion.

The suggested hand crimp tool for loose crimp contacts is Erni Part Number 014 374. The corresponding disassembly tool is Erni Part Number 471 555.

The cable assemblies (optional lengths of 6ft. or 12ft.) use the 160-Pin Connector kit along with two 80-wire multi-colored 24 gauge cables. One end is unterminated. Refer to **Table 3.1** for the mapping of channels to connector and cable.

1260-18 Module Specific Syntax

The 1260-18 card supports nearly all of the 1260 commands described in **Section 3.4** of the 1260 Option 01 manual. The only commands which are **NOT** supported are the READ and WRITE commands.

In addition, an INCL (include) command is supported by this module. The INCL command may be used to equate two or more relays within a single 1260-18 command. When any of the equated relays is operated, all of the equated relays are operated. For more information, consult Page 3-3 (“1260-18 INCL Command”) of this manual.

The following 1260 commands use “relay descriptors” to identify one or more relays:

OPEN
CLOSE
EXCL
SLIST
INCL

Relay descriptors are always unique for each 1260 module. The following paragraph describes the relay descriptor syntax for the 1260-18 module.

1260-18 Relay Descriptors

A "relay descriptor" identifies a relay (or range of relays) to be operated. The "relay descriptor" is unique for each 1260 module type.

The "relay descriptor" for the 1260-18 has the form:

<module address> . <channel range>

where:

<module address> is an integer from 1 to 12, inclusive.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

NOTE:

The <module address> used here is not the VXIbus defined Logical Address of the 1260 Series Master. It is unique to the 1260 Series and describes the switching module in relation to the Master. This address corresponds to the binary value of the switch setting of SW1 on the switching module PCB. Refer to the Installation Section of the 1260 Series VXI Switching Cards Manual for more information.

<channel range> is a single relay, or a list of relays. A comma or a hyphen may be used to separate relays in a <channel range>. When a comma is used, only the specific relays are operated. When a hyphen is used, all relays between the specified relay numbers are operated.

Each relay is identified by a single number in the range 0 to 151. The following examples, using the CLOSE command, show the various formats which are used for 1260-18 relay descriptors. Each of the samples shows a module address of 7 for the 1260-18

```
CLOSE 7.0           -- close channel 0

CLOSE 7.0,5         -- close channels 0 and 5

CLOSE 7.0-5         -- close channels 0, 1, 2, 3, 4, and 5

CLOSE 7.11-13,34    -- close channels 11, 12, 13, and 34

CLOSE 7.28,40-44,98-- close channels 28, 40, 41, 42, 43,
                                                  44, and 98
```

When a relay is closed, the two front panel connector pins associated with that relay are connected. When the relay is opened, the connection is broken and the two front panel connector pins are isolated.

Refer to **Table 3-1,** which shows channel to front panel pin-out mapping.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

1260-18 INCL Command

The 1260-18 uses the command INCL to equate two or more relays within a single module. When a relay is included with other relays, then closing that relay will close all relays included with the closed relay. Likewise, opening the relay will open all relays included with that relay.

When a relay is included with other relays on a module, those relays are said to be in an “include group”. Multiple include groups may be defined, but no relay may be in more than one include group.

NOTE:

The INCL command is not to be confused with the EQU (Equate) command which operates across boundaries only as described in the 1260 Option 01 manual.

There are three command syntaxes used with INCL command. The first command syntax is:

INCL 0

This command instructs the 1260 to discard all existing include groups. The RESET command will also discard all existing include groups.

The second syntax is used to define a new include group. This command uses the syntax:

INCL <include group>

where:

<include group> is a list of relays to be equated on an include group. This uses the “relay descriptor” syntax as defined on Page **3-2** (“1260-18 Relay Descriptors”) of this manual.

The following examples show several uses of the INCL command. Again, assume that the 1260-18 has a module address of 7:

INCL 7.0,13,29,147-- equate relays 0, 13, 29 and 147

INCL 7.40-42,50-52-- equate relays 40, 41, 42, 50, 51, and 52

Multiple include groups may be defined using a single INCL command. The individual include groups must be separated using the characters “I;”. For example, the following command defines 3

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

include groups:

INCL 7.20-23I;7.24-27I;7.28-30

This example defines 3 include groups. The first consists of relays 20, 21, 22, and 23; the second consists of relays 24, 25, 26, and 27; the third consists of relays 28, 29, and 30.

Each time the INCL command is used, one (or more) new include group is added to the list of include groups.

NOTE:

When the relays of a 1260-18 are specified in an include group, ALL relays in that group MUST reside on a single 1260-18 module. There is no "cross module" inclusion of relays.

The limitations for include groups (across all switch modules controlled by a single 1260 Option 01) are:

- A maximum of 255 include groups may be defined.
- The maximum number of relays that may be listed discretely in any single INCL command is 62. Larger INCL groups may be defined by the specification of a range (or ranges) of relay channels. This would allow the definition of a SP152T relay on a 1260-18 at module address 7 as follows:

INCL 7.0-151

- This limitation is due to the input command buffer size of the 1260 Option 01.

The final use of the INCL command is to query the existing include groups. The syntax for this use is:

INCL

When the INCL command is used with no parameters, the 1260 Option 01 will reply with a series of reply lines. Each reply line will correspond to a single include group. The final reply line will be the string:

END

and will be terminated with an ASCII carriage return and linefeed.

The example below shows a typical reply to the INCL command:

7.000,001,002,003
7.018,019,020,021

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

```
7.023,025,027,029
7.034,057,110,151
7.004,033,034,035,036,037,038,039
END
```

This example shows that 5 include groups have been defined.

If the reply to this command takes more than 80 characters to indicate a single include group, then the reply line will be terminated with a semicolon before the carriage return and linefeed. For example:

```
7.000,002,004,006,...,020,022;
7.022,024,026
```

This example indicates that the relays 022, 024, and 026 are on the same include group as those on the previous reply line, since the previous reply line was terminated with a semicolon.

CLOSE Command

The CLOSE command is used to close a channel.

Example:

```
CLOSE 7.002
```

This CLOSE command will close channel 2 of the module at switch card module address 7.

Example:

```
CL 7.028-036
```

This CLOSE command will close channels 28 through 36 of the module at switch card module address 7.

Example:

```
CL 7.066,071,072,073
```

This CLOSE command will close channels 66, 71, 72, and 73 of the module at switch card module address 7.

Note that channels remain closed until one of the following occurs:

- an OPEN command is used to specifically open the relay
- a RESET command is executed, opening all relays
- a VXI Word Serial Clear command is received, opening all

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

relays

- a VXI hard or soft reset is received
- a relay on the same exclude list (see EXCL Command) is closed
- power to the VXI chassis is turned off.

OPEN Command

The OPEN command is used to open a channel.

Example:

OP 7.014

This OPEN command will open channel 14 of the module at switch card module address 7.

Example:

OP 7.3-151

This OPEN command will open all of the channels between 003 and 151 of the module at switch card module address 7.

Example:

OP 7.110-120,122-144

This OPEN command will open all channels between 110 and 144, except channel 121.

EXCL Command

The EXCL command is used to define an “exclude group”. Two or more relays may be defined on a single exclude group. Multiple exclude groups may be defined.

Relays in an exclude group are considered mutually exclusive from each other. When a relay in an exclude group is closed, all other relays in the same exclude group are opened.

The EXCL command uses the syntax:

EXCL <exclude list> [E; <exclude list>]

where:

<exclude list> is a list of two or more relay descriptors.
The relays do **NOT** have to be on the same 1260 module, nor do

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

they have to be the same type of module.

Example:

Assume the 1260 Option 01 controls a 1260-40A card with module address 2, and a 1260-18 card with module address 7.

EXCL 2.0000-0123E;7.000-110E;2.0200-0323;7.111-151

This example defines three exclude groups. The first consists solely of 1260-40A relays, channels 0000 through 0123. The second consists solely of 1260-18 relays, channels 000 through 110. The third consists of a mix of 1260-40A relays and 1260-18 relays.

After an EXCL command is executed, the 1260 Option 01 will ensure that at most one relay in any exclude group is closed at one time. For example, suppose relay 7.103 is presently closed. Closing relay 7.000 will cause the 1260 Option 01 to first open relay 7.103 before closing relay 7.000. Similarly, if relay 7.111 is presently closed, then closing relay 2.0319 will cause the 1260 Option 01 to first open relay 7.111 before closing relay 2.0319.

PDATAOUT and PSETUP Module Identification

The first line of the reply to the PDATAOUT and PSETUP commands for the 1260-18 shall be:

XXX. 1260-18 HIGH DENSITY BASIC SWITCH MODULE

where:

XXX is the module address of the 1260-18 ("001" to "012"). All other reply lines for these commands shall follow the syntax used for all of the other 1260 series relay cards. Note that the lines of the reply for the PDATAOUT command will contain relay descriptors which follow the syntax described in this chapter.

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

PDATAOUT Command

The PDATAOUT command causes the specified module to reply with a list of relays which are closed on that module. The syntax for the PDATAOUT command is:

PD[ATAOUT] <module list> [; <module list> ...]

where:

<module list> ::= <module> | <module> - <module>
<module> ::= 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12

For example:

PD 1;3-6;9

causes each of the modules with module addresses 1, 3, 4, 5, 6, and 9 to reply with a list of closed relays.

The reply to the PDATAOUT consists of three or more reply lines, each of which is terminated with a carriage return followed by a linefeed. A minimum of three reply lines are returned.

The FIRST line is as follows:

<module>. 1260-18 HIGH DENSITY BASIC SWITCH MODULE

where module is the module address of the 1260-18 card ("000" to "012").

The LAST line is as follows:

<module>.END

Note that there is no space character between the period and the "E" of the "END" string.

Lines 2 through N-1 will have the form:

<module>. [<channel range> [,<channel range> ...]] [,]

where:

<module> ::= 001 | 002 | 003 | ... | 011 | 012
<channel range> ::= <channel> | <channel> - <channel>
<channel> ::= 000 | 001 | 002| ... | 150 | 151

If there are no closed relays, the second line will consist solely of the module addresses and the period. There will be no channels

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

listed, and there will be a total of three lines returned. For example:

```
007. 1260-18 HIGH DENSITY BASIC SWITCH MODULE
007.
007.END
```

If the second line can hold all of the closed relays, there will be a total of three lines returned. For example:

```
007. 1260-18 HIGH DENSITY BASIC SWITCH MODULE
007. 000,005-013,102,103,106-114
007.END
```

If the second line cannot hold all of the closed relays, the last character on the line before the carriage return/linefeed will be a comma. This indicates that more data is to follow on the third line. If the third line cannot hold all of the remaining closed relays, it too will be terminated with a comma, and more data will follow on the fourth line. The last line before the "END" line will NOT have a comma at the end. For example:

```
007. 1260-18 HIGH DENSITY BASIC SWITCH MODULE
007. 000,001,004,005,007,009,011,013,015,016,018,022,033,041,
007. 042,051-058,060,062,063-074,077,078,081,082,100,101,103,
007. 114-120,124,126,130,132-140,150
007.END
```

PSETUP Command

The PSETUP command causes the specified module setup to be transmitted to the VXI Controller. The syntax used is:

PS[ETUP] <module address>[;<module address>][;<module address>].....

where:

<module address> is the switch card address.

The response to the PSETUP command for the 1260-18 consists of three lines. Each line consists of a three-digit module address, followed by some information. A sample reply to the PSETUP command is shown below:

```
007. 1260-18 HIGH DENSITY BASIC SWITCH MODULE
007. BBM
007. END
```

The first line of the response to the PSETUP command is a header line. The header describes the model number.

The second reply line designates the setup mode for scanning. By default, this is Break-Before-Make (“BBM”). The other setup modes which may be returned on the second line include Make-

Artisan Technology Group - Quality Instrumentation ... Guaranteed | (888) 88-SOURCE | www.artisantg.com

Before-Break (“MBB”), and Immediate (“IMM”). The setup mode may be changed using the “SETUP” command, described in section 3.4 of the 1260 Option 01 manual.

The last line containing the "END" characters denotes no more information to report.

NOTES:

1. DISCARD UNUSED HARDWARE PART OF ITEM 20.
2. AFFIX LABELS (PART OF ITEM 37) AS SHOWN. ALIGN LABEL TEXT WITH APPROPRIATE SWITCH ACTUATORS.
3. NOTE NOT USED.
4. APPLY LOCTITE (ITEM 33) SPARINGLY TO ALL SCREWS THAT DO NOT USE MECHANICAL LOCKING HARDWARE. DO NOT ALLOW CONTACT WITH EJECTOR HANDLES (ITEM 19 TOP). AND (ITEM 18 BOT).
5. LOCATE APPROPRIATE VXI LABEL WHERE SHOWN. REFERENCE 921410 FOR SPECIFIC LABEL INFORMATION.
6. AT TACH BUMPER (ITEM 32) TO CIRCUIT SIDE OF PCB ASSEMBLY (ITEM 7) APPROXIMATELY WHERE SHOWN.
7. SHIPPING KIT ITEM 6 TO BE SHIPPED WITH UNIT.

PROPRIETARY NOTICE

THIS DOCUMENT AND THE TECHNICAL DATA HEREIN DISCLOSED ARE PROPRIETARY TO RACAL INSTRUMENTS INC. AND SHALL NOT, WITHOUT THE EXPRESS WRITTEN PERMISSION OF RACAL INSTRUMENTS INC., BE USED, REPRODUCED OR DISCLOSED IN WHOLE OR IN PART, OR USED TO SOLICIT QUOTATIONS FROM A COMPETITIVE SOURCE OR USED FOR MANUFACTURE BY ANYONE OTHER THAN RACAL INSTRUMENTS INC. THE INFORMATION HEREON HAS BEEN DEVELOPED AT PRIVATE EXPENSE, AND MAY ONLY BE USED FOR PURPOSES OF ENGINEERING EVALUATION AND FOR INCORPORATION INTO TECHNICAL SPECIFICATIONS AND OTHER DOCUMENTS WHICH SPECIFY PROCUREMENT OF PRODUCTS FROM RACAL INSTRUMENTS INC.

Chapter 6

OPTIONAL HARNESS ASSEMBLIES

The following harness assemblies are used to connect Racal Instruments Model 1260-18 to Freedom Series Test Receiver Interfaces.

Each harness documentation consists of an assembly drawing, parts list, system wire list and wire list.

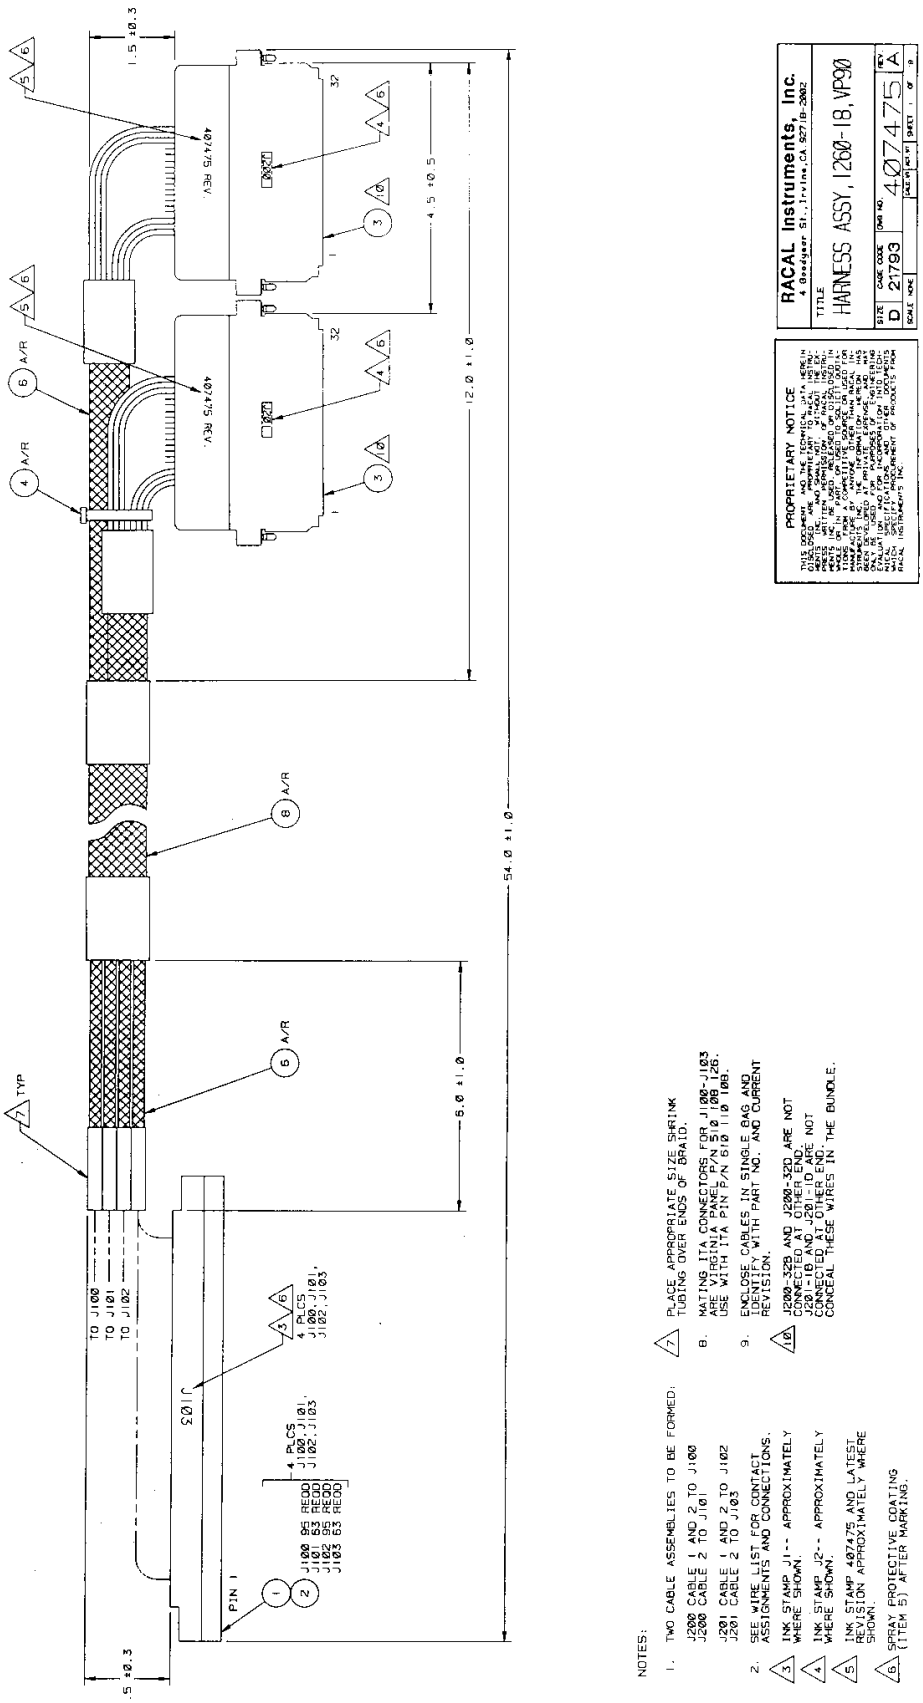

407475	Virginia Panel, Inc. Series VP90 Interface Harness
407476	TTI Testron, Inc. Interface Harness

For more information on Racal Instruments complete line of Test Receivers Interface solution, contact your Sales Representative.

Chapter 7
PRODUCT SUPPORT

Product Support

Racal Instruments has a complete Service and Parts Department. If you need technical assistance or should it be necessary to return your product for repair or calibration, call 1-800-722-3262. If parts are required to repair the product at your facility, call 1-949-859-8999 and ask for the Parts Department.

When sending your instrument in for repair, complete the form in the back of this manual.

For worldwide support and the office closes to your facility, refer to the Support Offices section on the following page.

Reshipment Instructions

Use the original packing material when returning the 1260-18 to Racal Instruments for calibration or servicing. The original shipping crate and associated packaging material will provide the necessary protection for safe reshipment.

If the original packing material is unavailable, contact Racal Instruments Customer Service for information.
