

Artisan Technology Group is your source for quality new and certified-used/pre-owned equipment

- FAST SHIPPING AND DELIVERY
- TENS OF THOUSANDS OF IN-STOCK ITEMS
- EQUIPMENT DEMOS
- HUNDREDS OF MANUFACTURERS SUPPORTED
- LEASING/MONTHLY RENTALS
- ITAR CERTIFIED SECURE ASSET SOLUTIONS

SERVICE CENTER REPAIRS

Experienced engineers and technicians on staff at our full-service, in-house repair center

*InstraView*SM REMOTE INSPECTION

Remotely inspect equipment before purchasing with our interactive website at www.instraview.com ↗

WE BUY USED EQUIPMENT

Sell your excess, underutilized, and idle used equipment. We also offer credit for buy-backs and trade-ins. www.artisanng.com/WeBuyEquipment ↗

WE BUILD COMPLETE FIBER OPTIC SOLUTIONS

ISO9001 COMPLIANT / MIL-I-45208A Certified

685MRLTS Multimode Return Loss Test Set

The RIFOCS 685MRLTS, Multimode Return Loss Test Set represents a production testing breakthrough for multimode testing applications. Powered by ®, the application software package that makes fiber optic testing a

snap to set-up and easy to perform, the 685MRL Series provides reliable and repeatable return loss and insertion loss measurements for all multimode applications. In addition, the 685MRL Test Set includes all of the fiber optic test equipment, cables and adapters necessary; simply add your PC and GPIB/interface card and cable to begin testing. Software control reduces time and operator variability. Fiber optic testing and world class quality requirements impose the dual need for accuracy of the measurement and repeatability of the test itself. Our years of leading edge design and manufacturing of fiber optic test and measurement equipment have gone into the MRLTS - your assurance of product performance. Many human factors go into the variability of any test process whether in the lab or on the production floor. Through the integration of our ® software control, GPIB interface and our modular hardware, we have reduced testing variability by reducing the amount of touch-labor involved per test, while making maximum use of “point and click” mouse technique.

Data capture and management made easy!

The 685MRLTS includes ® CTS, a Windows 95/NT compatible application. While your operators are taking measurements, ® is working in the background to log all data captured including test results, serial number, number of re-tests as well as statistical analysis for standard deviation, averages and more. Users are assured that all data required to support world class quality initiatives is available. Software control allows data analysis to be accomplished at a remote location via network control. Finally, component labels can be printed out to any commercial grade printer using popular Brady or Panduit label configurations.
