Spectrum Analyzers FSE

20 Hz to 40 GHz

- Spectrum analysis
  with ultra-wide dynamic range
  Noise figure = 15 dB/T.O.I. = 15 dBm
  and
- Universal analysis of digital and analog modulated signals (option)
  BPSK, QPSK, π/4-DQPSK, QAM
  MSK, GMSK, AM, FM, PM

- High-speed synthesizer
  5 ms for full span (FSEA, FSEB)

- Refresh rate, quasi-analog
  25 sweeps/s

- Large LC TFT display
  24 cm/9.5", active

- Future-proof modular design
  Customized solutions through wide variety of options

ROHDE&SCHWARZ

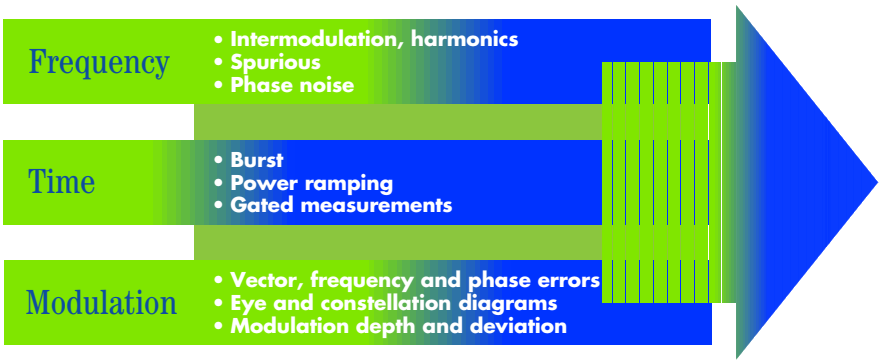

The spectrum analyzers from Rohde&Schwarz

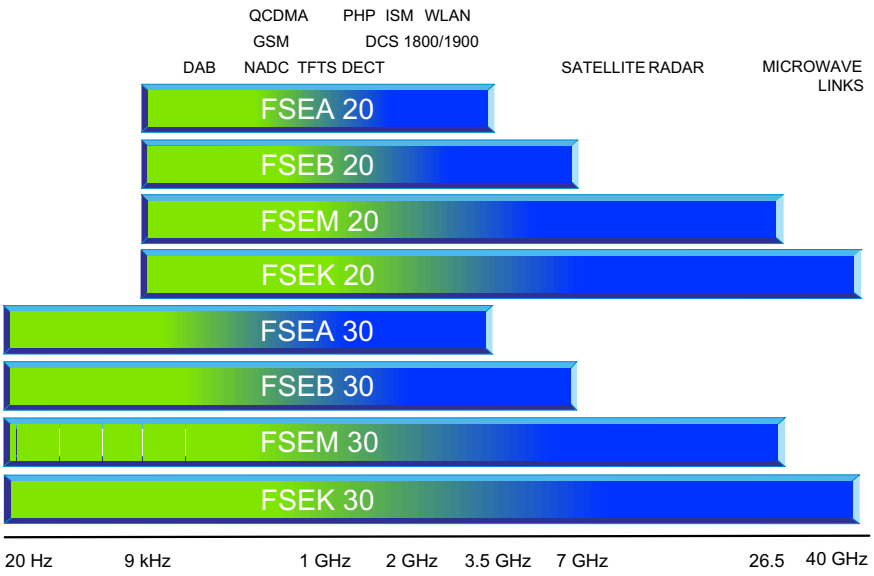

Overview

The FSE spectrum analyzers from Rohde&Schwarz have been optimized both for general-purpose measurements and meeting the stringent requirements of testing advanced digital communication systems. Extremely high measurement speed, future-proof modular design and excellent characteristics put the analyzers right at the top of today's market – at a price of a medium-range product.

Characteristics

- Combines the following functions: spectrum analysis *and* analysis of digitally modulated signals (option)
- Fastest synthesizer worldwide incorporated in a spectrum analyzer
- Adaptation of all models to your specific requirements by means of a wide range of options.
  Easy upgrading of basic models into top-class models

Modular design for a safe investment

Getting down to analysis

Specifications in brief

- Resolution bandwidths
  10 Hz to 10 MHz (models .20),
  1 Hz to 10 MHz (models .30),
  adjustable in steps of
  1/2/3/5/10
- Displayed noise floor
  –150 dBm (typ.) in
  10-Hz bandwidth
- 3rd-order intercept point +15 dBm
- 1-dB compression point
  of RF input >+10 dBm
- Phase noise at 10 kHz from carrier: –123 dBc/Hz (FSEA 30)
- Total measurement error
  up to 1 GHz <1 dB,
  up to 7 GHz 1.5 dB
- AM/FM demodulator
  (with built-in loudspeaker and
  headphones connector)
- Internal RF trigger (trigger threshold approx. –20 dBm)
- 5 ms full-span sweep time
  with fully synchronized sweep
  (FSEA, FSEB), 150 ms with FSEM
- 1 µs zero-span sweep time
- Pretrigger and trigger delay
- Gated sweep

Vector analysis for digital communication

The analyzers of the FSE family combine the capabilities of high-end RF or microwave spectrum analysis with those of universal digital-signal demodulation and analysis. This becomes possible with the vector signal analyzer option. The spectrum analyzer function offers the wide dynamic range necessary for many measurements on digitally modulated signals (eg burst measurements), and the vector signal analyzer option adds demodulation capability to bit stream level for

– BPSK – QPSK
– π/4-DQPSK – 16QAM
– (G)MSK – (G)FSK

All this is backed up by a variety of display types:

- Eye diagrams
- Vector and constellation diagrams
- Frequency and phase error
- Vector error

With a spectrum analyzer of the FSE family, you are perfectly equipped for the future of digital communication.

Modularity safeguards investments

Series FSE analyzers are of modular design throughout. From the wide variety of options, you can choose exactly those needed for your particular application (see table on folding page).

You thus get an instrument tailor-made to your requirements and pay for no more than what you actually need. At the same time, you can feel sure that FSE will grow with your tasks and requirements as virtually all options can be retrofitted and model .20 units can easily be upgraded later to almost the same performance as provided by top-class models .30. Even extending the frequency range from 3.5 to 7 GHz is no problem with option FSE-B2.

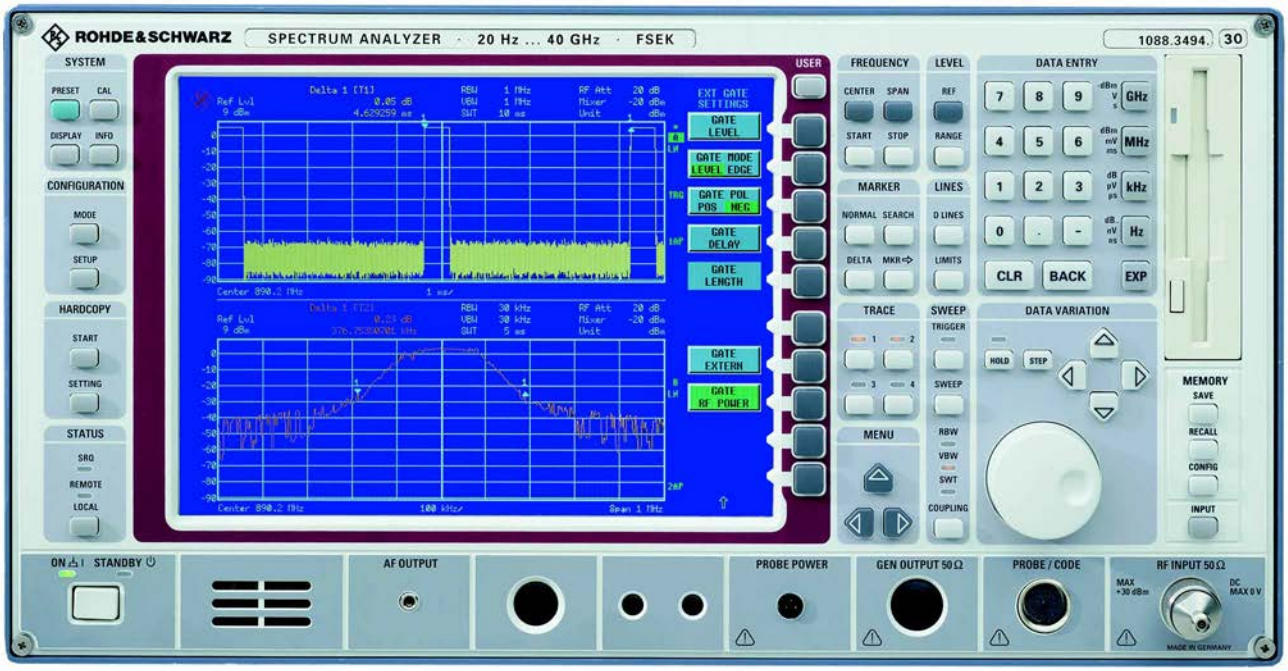

Your decision for Spectrum Analyzer FSE is a decision for a safe investment.

A triple record holder in speed

FSE breaks the speed record in three fields:

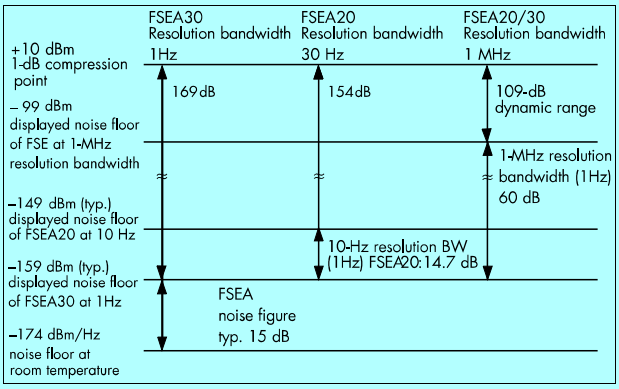

- FSE features a minimum full-span sweep time of 5 ms (for FSEA and FSEB) with a fully synchronized sweep. This means that added speed is not at the expense of frequency accuracy but even enhances it.
- The shortest zero-span sweep time is 1 µs (100 ns/div) – ideal for high-resolution measurements on pulse edges.
- Up to 25 sweeps per second is an optimal prerequisite for rapid and easy alignments and for applications in production.

With its high measurement speed and great ease of operation, FSE will solve even highly complex measurement tasks in the shortest possible time.

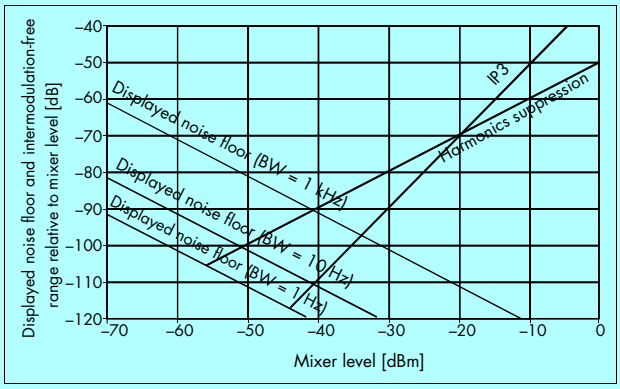

Spectrum Analyzer
FSEK30

The features in detail

Dynamic range, noise and 1-dB compression point for models of Spectrum Analyzer FSE

Dynamic range, noise, 3rd-order intercept point

Tops in dynamic range

FSE is outstanding for its extremely low noise floor without any impairment to the dynamic range at large signal levels. This can be seen, for example, from the 1-dB compression point of +10 dBm, which yields a dynamic range of 109 dB even at a resolution bandwidth of 1 MHz, allowing GSM and DECT power ramps to be determined.

The extremely wide intermodulation-free dynamic range of typ. 116 dB (models .30) and 105 dB (models .20) not only ensures reliable measurements on highly linear amplifiers, it also enables detailed analysis of complex broadband signals.

Taking as a figure of merit of an analyzer the difference between its 3rd-order intercept point and its noise figure, FSEA can offer a value of around 0 dB. Put this figure to the test.

From AF to microwave

FSEM/K open up the microwave range through to 26.5/40 GHz and retain the excellent characteristics of the 3.5 and 7 GHz basic models:

- Continuous full-span sweep
- Fundamental mixing, low noise floor as well as wide dynamic range up to 26.5 GHz
- Fully synchronized sweep with high frequency accuracy even for FULL SPAN (26.5/40 GHz)
- RF input adapters for N or PC 3.5-mm, or with FSEK K male/female connector

Unattained measuring convenience

FSE makes measuring easy for you, offering a large number of convenient test functions:

- 4 markers, 4 delta markers
- Marker functions for direct measurement of
  - phase noise and noise power density (/Hz)
  - NEXT MIN/PEAK, NEXT MIN/PEAK RIGHT, NEXT MIN/PEAK LEFT
  - bandwidths and shape factor
- Measurement of channel power, adjacent channel power and occupied bandwidth
- Frequency counter with selectable resolution
- LOW NOISE, NORMAL and LOW DISTORTION modes to cater for low-intermodulation and low-noise operation
- One-button hardcopy on printer or plotter

Model	Frequency range	On-Screen Dynamic Range	Resolution bandwidths	Low phase noise and OCXO	1-Hz resolution bandwidth	FFT Filter
FSEA20	9 kHz to 3.5 GHz	95 dB	10 Hz to 10 MHz, 4-pole filters	❍	❍	❍
FSEA30	20 Hz to 3.5 GHz	105 dB	1 Hz to 10 MHz, 5-pole filters	●	●	●
FSEB20	9 kHz to 7 GHz	95 dB	10 Hz to 10 MHz, 4-pole filters	❍	❍	❍

FSEM30	20 Hz to 26.5 GHz	105 dB	1 Hz to 10 MHz, 5-pole filters	●	●	●
FSEK20	9 kHz to 40 GHz	95 dB	10 Hz to 10 MHz, 4-pole filters	❍	❍	❍
FSEK30	20 Hz to 40 GHz	105 dB	1 Hz to 10 MHz, 5-pole filters	●	●	●

Differences between FSE models in detail ● Incorporated in basic model ❍ Can be retrofitted

- Simultaneous measurement of four active traces
- Level, frequency and user-definable limit lines as evaluation help with pass/fail information
- Split screen with independent measurement windows
- Quasi-analog display

Frequency accuracy – to the point

Tuning on FSE is absolutely synchronous to the reference frequency for each span including full span. This means that every point on the frequency axis is determined with the accuracy of the internal reference frequency and the pixel resolution. Thus, when reducing the span for detailed signal analysis, the tiresome readjustment of the center frequency is no longer needed.

FSE in its basic configuration includes an AM/FM audio demodulator. Unknown signals can thus easily be identified via headphones or the built-in loudspeaker. Modulation measurements are possible using the optional Vector Signal Analyzer FSE-B7.

Limit lines facilitate checking if results are within predefined tolerances. Virtually any number of limit lines can be defined with high accuracy by means of 50 points to meet even the most exacting requirements.

Scalar network analysis

The optional tracking generators (see data sheet for FSE-B8/9/10/11) are an ideal tool for determining frequency response, attenuation or VSWR and feature the following characteristics:

- Wide dynamic range for attenuation measurements (up to 120 dB)
- Frequency range from 9 kHz to 3.5/7 GHz
- Frequency offset up to ± 200 MHz for measurements on frequency-converting modules

To generate digitally modulated signals the tracking generators with built-in I/Q modulator are ideal. An external two-channel Arbitrary Waveform Generator (eg ADS from Rohde & Schwarz) serves as modulation source.

By adding the optional Vector Signal Analyzer FSE-B7, FSE can be expanded to a test assembly enabling direct measurement of the influence of amplifiers or filters on phase error for instance.

The features in detail

Designation	Type	Use	Functions
Noise Measurement Software	FSE-K3	Noise figure measurements	• Measurement of noise figure and temperature to Y-factor method • 2nd-stage correction • Conversion measurements • Frequency range same as basic unit, starting from 100 kHz • Editor for ENR tables • Runs under Windows® 3.1 on the internal controller (option) or on an external PC
Application Firmware [1])	FSE-K10, Mobile FSE-K11, BTS	Mobile radio, transmitter measurements to GSM standards 11.10 and 11.20	• Power ramp and power template • Spectrum due to modulation/switching • Spurious emissions • Mean carrier power • Phase/frequency error (with option FSE-B7)

[1]) See data sheet FSE-K10/-K11

Operation – as you like it

Despite their comprehensive functionalities the analyzers feature great ease of operation. Basic functions and frequently used help tools such as markers can be called at a keystroke. The full operating convenience based on a wide variety of evaluation routines and marker functions can be accessed via the menus.

All essential parameters and results can be seen at a glance. All test data, scale factors and setting parameters are logically arranged and thus easy to find. Setups, traces and graticules displayed in colour make for error-free analysis of complex results.

All models are equipped with a large 24-cm (9.5") TFT colour display with VGA resolution (640 x 480 pixels).

The USER key allows FSE operation to be tailored to your specific requirements. With this key, you can compile the functions mainly needed for your measurement tasks, doing away with frequent menu changes and speeding up measurements on the whole.

Test results – perfectly documented

FSE affords uncomplicated logging of results. It supports a wide variety of printers or plotters:

- FX-80 and compatibles
- Printers with HP-PCL
- HP-GL
- Postscript

Print files can not only be output via an interface but also be stored on diskette or the internal harddisk. With PCX, WMF and HP-GL print formats being available, there is no problem in further processing print files in standard text processing systems. Using Controller FSE-B15, it is particularly easy to generate test reports and integrate the results. Texts can then be processed under Windows® on FSE itself.

FSE works as a Controller

The optional Controller FSE-B15 provides a further VGA card, a memory extension to 16 Mbyte, a serial mouse and a keyboard. FSE-B15 is available in English and German and is supplied installed in FSE when ordered together with the unit. The option opens up the world of Windows®-3.1 applications (standard mode), eg statistics programs or spreadsheet analysis. FSE can even be linked to a network using the optional Ethernet Interface FSE-B16.

Complete setups, traces, limit lines and macros can be stored non-volatile on the internal harddisk or on diskette with the built-in 1.44-Mbyte drive.

Rear of Spectrum Analyzer FSE

Quality management at Rohde&Schwarz

Lasting customer satisfaction is our primary objective. The quality management system of Rohde&Schwarz meets the requirements of ISO 9001 and encompasses largely all fields of activity of the company.

Certified Quality System
ISO 9001
DQS REG. NO 1954-04

FSE in automatic test systems

FSE is ideal for use in automatic test systems, affording not only fast processing of results but also an IEC/IEEE-bus command set conforming to SCPI.

Moreover, with optional Controller FSE-B15 and a second IEC/IEEE-bus card (option FSE-B17), FSE can be used as a controller for test systems, thus eliminating the need for further units and saving space in the system cabinet.

Low overall costs

In designing FSE, special emphasis was placed on keeping after-sales costs to a minimum:

- Temperature-controlled blowers
- Calibration interval up to 2 years
- Built-in calibration routines
- Numerous selftest routines
- Modular design

Calibration routines

Built-in calibration routines ensure that FSE remains within defined tolerances and thus maintains its accuracy of measurement. The routines are not performed automatically by the instrument but can be started by the user, thus avoiding ongoing measurements to be interrupted.

The results of calibration routines are output by FSE in the form of comprehensive correction tables. Comparing these tables over an extended period of time, the user can detect changes early and take corrective steps in time. This enhances confidence in the unit's reliability and measurement accuracy.

A particular asset in system applications is the internally selectable, high-precision level calibration source, which reduces the number of cables required.

Selftest – the built-in diagnostic system

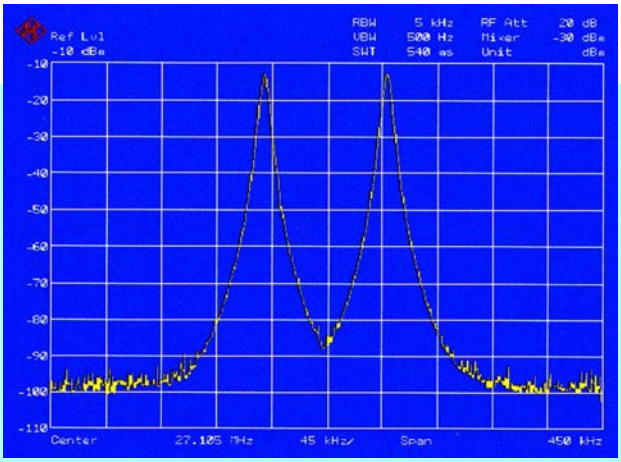

The instrument selftest rapidly locates any faults down to module level. Defective modules can be replaced nearly without adjustments or extra test equipment being required. This in conjunction with the quick spare parts service from Rohde&Schwarz reduces any repair or down-time costs that might arise. The low operating costs go easy on your budget.

Modular design – easy retrofitting of options

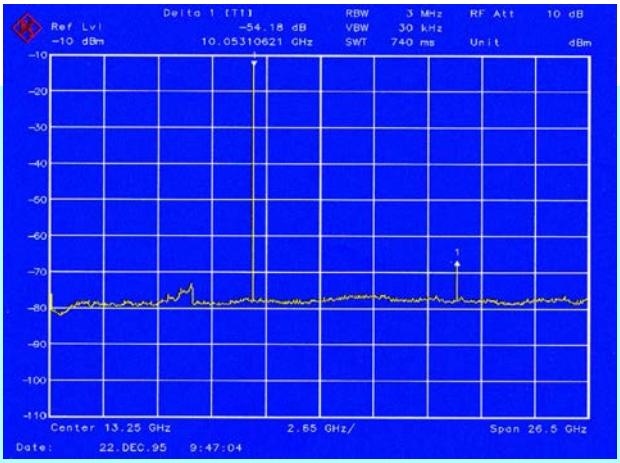

The easy concept for fitting the most important options, ie Vector Signal Analyzer, Low Phase Noise and OCXO, 7-GHz Frequency Extension, as well as the easy, adjustment-free incorporation of the remaining options make it possible to retrofit the instrument with a minimum of downtime or installation costs being involved.

Applications

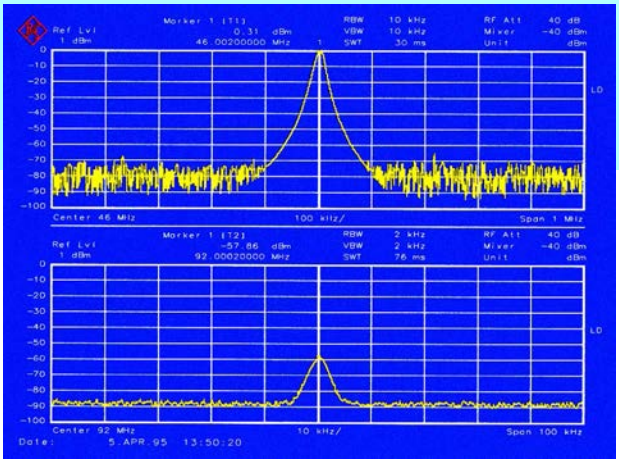

General-purpose RF measurements

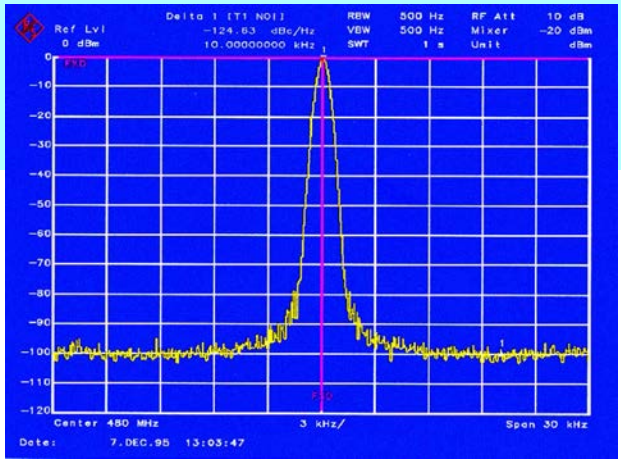

1

3

2

4

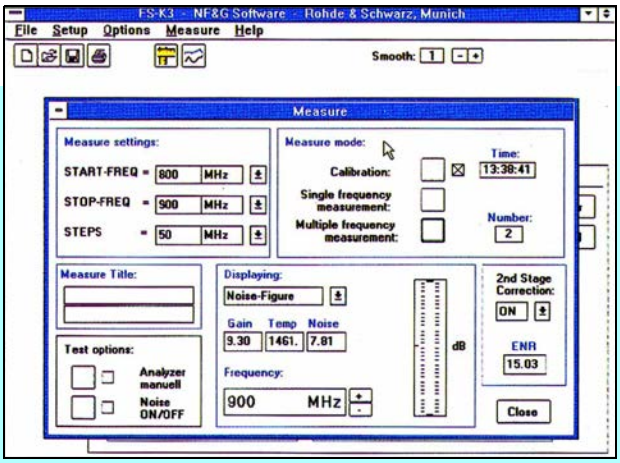

Two-tone measurements (1)
FSE facilitates intermodulation measurements with its wide intermodulation-free dynamic range, which reduces measurement errors. This feature is enhanced by the LOW DISTORTION mode, which ensures optimum RF attenuation. Evaluation of results is rapid and easy by means of markers and delta markers.

Harmonics measurements with split screen (2)
The split-screen function has been provided for the convenient analysis of results. In harmonics measurements, for example, the fundamental and the first harmonic can be displayed simultaneously with high resolution.

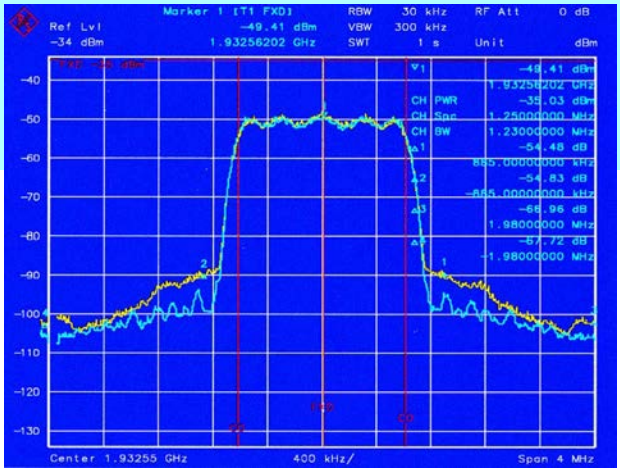

Low noise floor even in the microwave range (3)
Thanks to fundamental mixing FSEM features the same constantly low noise floor as an RF analyzer up to 26.5 GHz. As a consequence, FSEM offers not only a wide dynamic range, but also a considerably increased speed for measuring small signals in the microwave range: Larger resolution bandwidths and high sensitivity reduce sweep time while maintaining the S/N ratio. This is of great advantage when measuring spurious and harmonics alike.

FSE phase noise as a function of carrier spacing (4)
With a phase noise of –123 dBc/Hz at 10 kHz from the carrier, the synthesizer incorporated in FSEA 30 is ideal for measuring the phase noise of oscillators or the adjacent-channel power of radio equipment. FSEA 20, on the other hand, is ideal for applications where phase noise in the vicinity of the carrier plays a less important role. Thanks to the modular design of the instrument, FSEA 20, FSEB 20, FSEM 20 and FSEK 20 can easily be retrofitted with the synthesizers of models .30.

Noise figure measurements

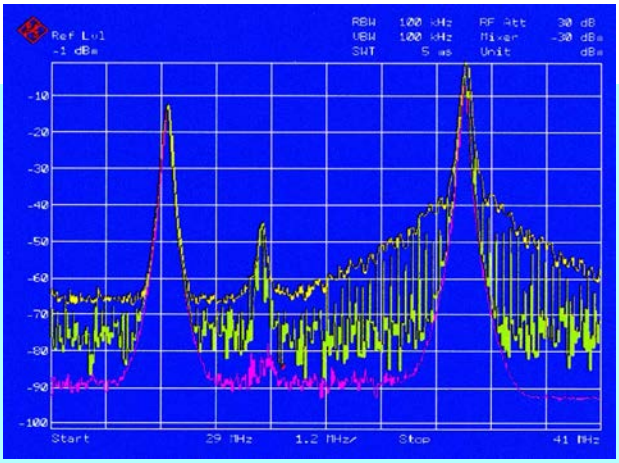

1

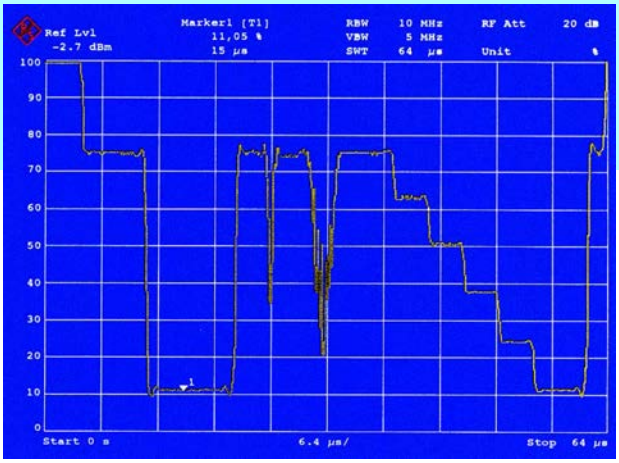

2

TV measurements

3

4

Noise Measurement Software FSE-K3 (1)

FSE-K3 turns your FSE into a noise measurement system offering the advantages of an analyzer (see also data sheet 757.2380):

- From the large number of resolution bandwidths available, you can choose the right one for your application, even for measurements on narrowband DUTs
- With ambiguous results, you can check your test system for EM pick-up or nonharmonics
- The lower frequency limit is 100 kHz
- Measurements on frequency-converting DUTs are supported with the use of an external generator

RMS detector: power measurement without correction factors as shown in **FIG 2** where the power of a CDMA signal in the transmission and the adjacent channels is measured. The two traces show the influence of the DUT on the adjacent-channel power. Measuring power and adjacent-channel power of digitally modulated signals requires a spectrum analyzer to be equipped with special detectors and test routines. FSE is the first and the only spectrum analyzer that features a real power detector with wide dynamic range – the RMS detector. Like a thermocouple power meter, this detector guarantees stable and accurate test results without any correction factors. Considerably higher test throughput is achieved than with the usual sample detector. Using the available default settings for ACP measurements in line with common standards (NADC, PDC, CDMA, etc) precise test results are obtained easily and fast.

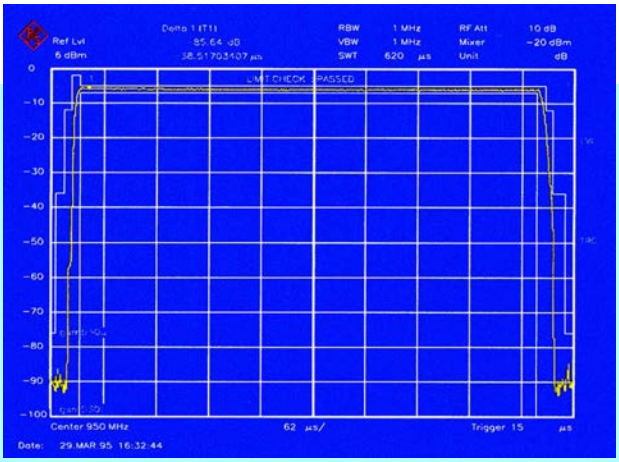

TV signal in zero span and TV trigger (3 and 4)

With a maximum resolution bandwidth of 10 MHz, implemented with the optional TV Demodulator FSE-B3, and the high resolution of 100 ns/div, FSE meets all requirements for the analysis of TV signals. In addition, FSE-B3 provides the following functions:

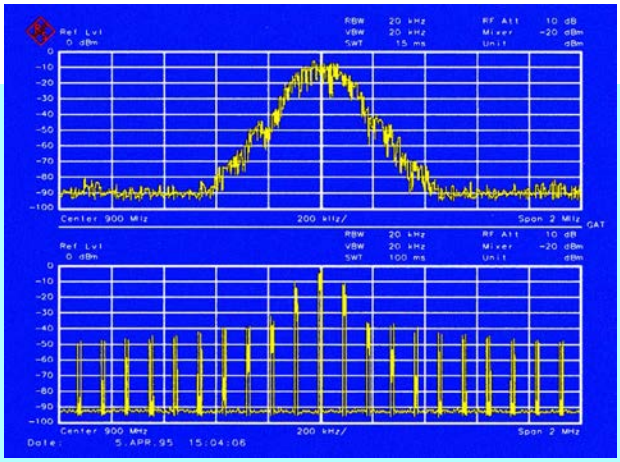

- Frame trigger
- Line trigger with selection of line

Applications

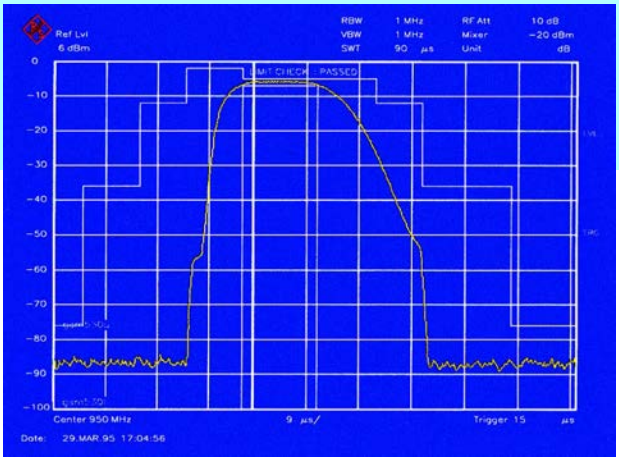

Mobile radio – digital and analog

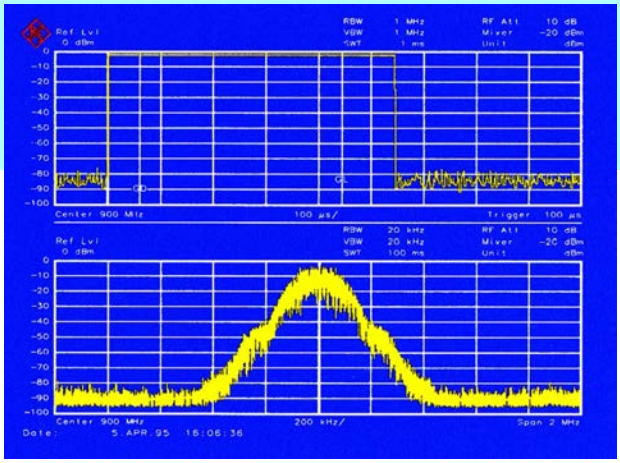

1

3

2

4

- CCVS output for connecting a monitor, adaptable to all standards

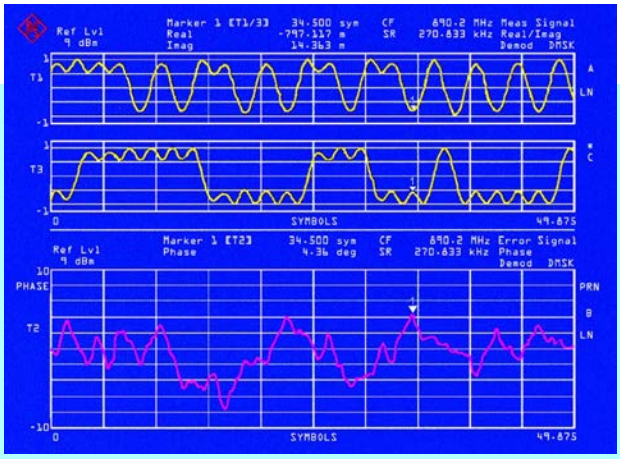

Moreover, the quasi-analog display provides luminance-signal information, enabling the detection of intermodulation products in the TV spectrum.

RF power trigger replaces external trigger (no illustration)
An internal broadband level detector (center frequency ±50 MHz) with a fixed switching threshold of approx. –20 dBm at the first mixer is used as a trigger source. With this detector it is possible, for example, to perform "Spectrum due to switching" and "Spectrum due to modulation" measurements to GSM specifications without an external trigger. Likewise, the detector replaces the external trigger needed in the gated sweep mode.

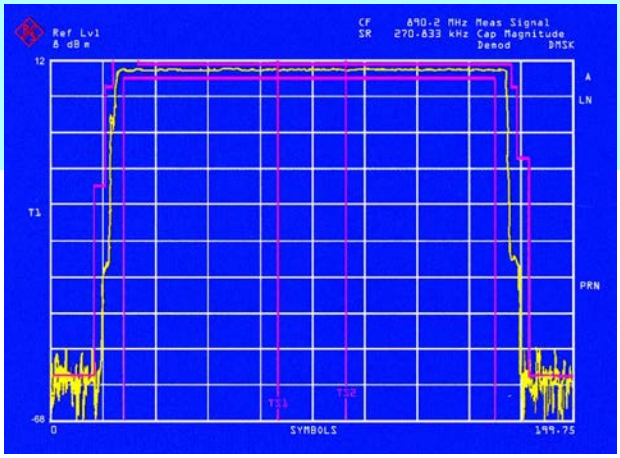

Gap sweep: simultaneous measurement of pulse rise and fall times with high time resolution (1 and 2)
The fast sweep time of 100 ns/div as well as the gap sweep and pretrigger functions of Spectrum Analyzer FSE make it possible to measure the rise and fall times of an RF pulse simultaneously and with high time resolution. The center of the pulse, which is of no interest, is blanked. Even at a resolution bandwidth of 1 MHz FSE offers a dynamic range of over 80 dB thanks to the high 1-dB compression point of +10 dBm.

Gated sweep (3 and 4)
The gated sweep function is indispensable for analyzing TDMA signals used in modern communication systems. With this function, the spectrum of burst signals can be investigated without any interference being caused by switching the signals on and off. The selected gate time determines over what interval a pulse is to be analyzed. Selection of the gate time is very easy and convenient in the time domain display (zero span) of the pulse.

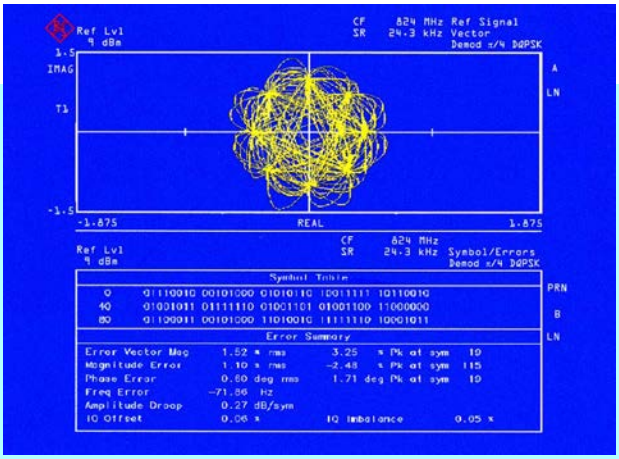

Vector signal analysis

1

2

3

1 I/Q signal and phase error measurements over 50 symbols of a GSM mobile

2 Measurement of GSM power ramps to standards with high-precision time reference through synchronization to mid-amble

3 Measurement of modulation error of π/4-DQPSK signals (NADC)

Universal analysis of digital signals

Spectrum Analyzer FSE in conjunction with the optional Vector Signal Analyzer FSE-B7 is ideal for demodulating and measuring digitally modulated signals with frequencies up to 3.5 GHz, 7 GHz, 26.5 or 40 GHz. This universal tool offers a wide variety of settings:

- Demodulation of all common mobile-radio signals
- Freely selectable symbol rates
- Type of filter
- Roll-off factor or BT product of filter
- Synchronization bit sequences
- Predefined, application-specific settings for all common standards, eg GSM, PCS 1900, NADC, CDMA (IS95)

Versatile display of results

- In-phase and quadrature signals
- Magnitude and phase
- Vector and constellation diagrams
- Eye and trellis diagrams
- Sum fault: amplitude, frequency, phase, vector

Power ramp measurements

To perform power ramp measurements on TDMA systems such as GSM or DECT in line with standards, reference must be made to synchronization sequences (pre- or mid-amble) in order to establish a time reference. Making such measurements to standard is not possible using conventional analyzers – it is no problem with FSE!

Accurate AM, FM and φM measurements

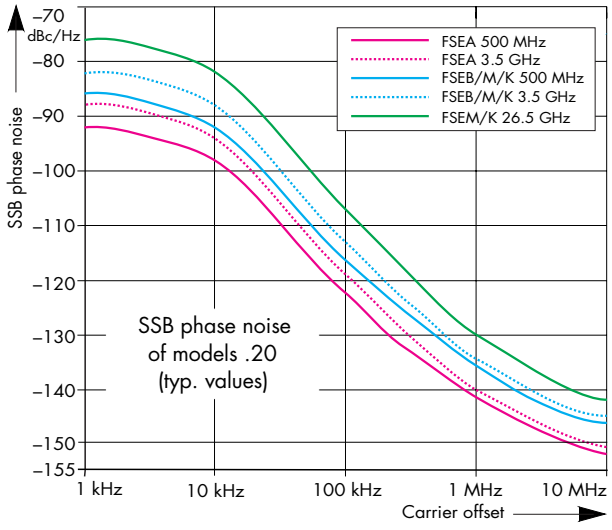

Featuring high-accuracy measurement of the modulation depth and frequency deviation coupled with the display of demodulated signals in the time domain, FSE not only enables testing of analog and dual-mode radio equipment but also the determination of fast transient response in frequency and amplitude (see separate data sheet Vector Signal Analyzer FSE-B7, order number 757.2167).

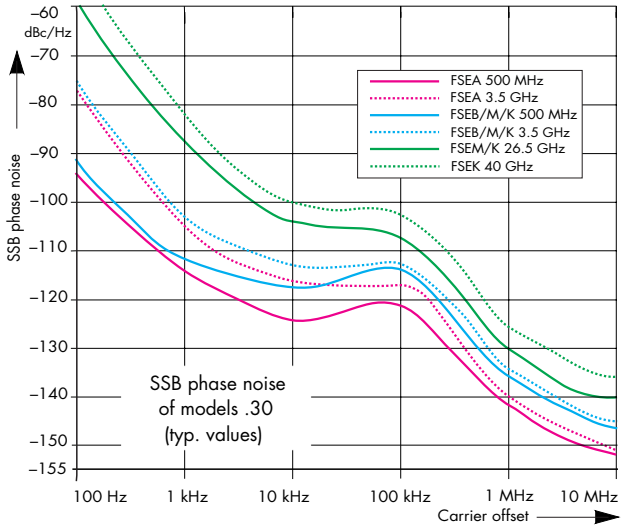

Spectrum Analyzer FSE and the optional vector signal analyzer provide universal test capabilities in one unit.

Specifications

	FSEA20	FSEA30	FSEB20	FSEB30	FSEM20	FSEM30	FSEK20	FSEK30
Specifications are guaranteed under the following conditions: 30 minutes warmup time at ambient temperature, specified environmental conditions met, calibration cycle adhered to, and total calibration performed. Data without tolerances: typical values only. Data designated "nominal" apply to design parameters and are not tested.

Bandwidth switching error								
1 Hz to 30 kHz/100 to 300 kHz	<0.2 dB/<0.2 dB							
1 to 10 MHz	<0.3 dB							
Total measurement error (0 to –50 dB, S/N >15 dB, span/RBW <100)								
<1 GHz	<1 dB							
1 to 3.5/7 GHz	<1.5 dB							
7 to 18 GHz	–	–	–	–	<2.5 dB[1])			
18 to 26.5 GHz	–	–	–	–	<3 dB[1])			
26.5 to 40 GHz	–	–	–	–	–	–	<3.5 dB[1])	
Pulse amplitude error (single pulses)								
Bandwidth <1 MHz/≥1 MHz	<0.5 dB, nominal/<2 dB, nominal							

Trigger functions

Trigger	free run, line, video, RF, external							
Delayed sweep								
Trigger source	free run, line, video, RF, external							
Delay time	100 ns to 10 s, resolution 1 µs min. (or 1% of delay time)							
Error of delay time	±(1 µs + (0.1% × delay time))							
Delayed sweep time	2 µs to 1000 s							
Gated sweep								
Trigger source	external, RF							
Gate delay	1 µs to 100 s							
Gate length	1 µs to 100 s, resolution min. 1 µs or 1%							
Error of gate length	±(1 µs + (0.05% × gate length))							
Gap sweep (span = 0 Hz)								
Trigger source	free run, line, video, RF, external							
Pretrigger	1 µs to 100 s, 50 ns resolution, dependent on sweep time							
Trigger to gap time	1 µs to 100 s, 50 ns resolution, dependent on sweep time							
Gap length	1 µs to 100 s, 50 ns resolution							

Audio demodulation

AF demodulation types	AM and FM							
Audio output	speaker and phone jack							
Marker stop time	100 ms to 60 s							
Squelch	adjustable by means of level line							

[1]) For RF frequencies >7 GHz: error after calling peaking function. For sweep times <10 ms/GHz: additional error 1.5 dB.

Specifications

	FSEA20	FSEA30	FSEB20	FSEB30	FSEM20	FSEM30	FSEK20	FSEK30
Inputs & outputs (front panel)								
RF input	N female, 50 Ω				adapter system, 50 Ω, N male and female, 3.5 mm male and female		adapter system, 50 Ω, N male and female, K male and female	
VSWR (RF attenuation >0 dB)

f <7 GHz	–		<2.0					
f <26.5 GHz	–	–	–	–	<3		<2.5	
f <40 GHz	–	–	–	–	–	–	<2.5	
Attenuator	0 to 70 dB, selectable in 10-dB steps							
Probe power supply	+15 V DC, –12.6 V DC and ground, max. 150 mA							
Power supply and coding connector for antennas etc (antenna code)	12-contact Tuchel							
Supply voltages	±10 V, max. 100 mA, ground							
AF output	Z_{out} = 10 Ω, jack plug							
Open-circuit voltage	adjustable up to 1.5 V							
Inputs & outputs (rear panel)								
IF 21.4 MHz	Z_{out} = 50 Ω, BNC female, bandwidth >1 kHz or resolution bandwidth							
Level	0 dBm at reference level, mixer level >–60 dBm							
Video output	Z_{out} = 50 Ω, BNC female							
Voltage (bandwidth ≥1 kHz)	0 to 1 V, full scale (open-circuit voltage); log scaling							
Reference frequency								
Output, usable as input	BNC female							
Output frequency	10 MHz							
Level	10 dBm nominal							
Input	1 to 16 MHz, integer MHz							
Required level	>0 dBm from 50 Ω							
Sweep output	BNC female, 0 to 10 V, proportional to displayed frequency							
Power supply connect. f. noise source	BNC female, 0 and 28 V, switch-selected							
External trigger/gate input	BNC female, >10 kΩ							
Voltage	–5 to +5 V, adjustable							
IEC/IEEE-bus control	interface to IEC-625-2 (IEEE 488.2)							
Instruction set	SCPI 1994.0							
Connector	24-contact Amphenol female							
Interface functions	SH1, AH1, T6, L4, SR1, RL1, PP1, DC1, DT1, C11							
Serial interface	RS-232-C (COM 1 and COM 2), 9-contact female connectors							
Mouse interface	PS/2 compatible							
Plotter	via IEC/IEEE bus or RS-232-C							
Plotter language	HP-GL							
Printer interface	parallel (Centronics compatible) or serial (RS-232-C)							
Keyboard connector	5-contact DIN female for MF-2 keyboard							
User interface	25-contact Cannon female							
Connector f. external monitor (VGA)	15-contact female							
General data								
Display	24-cm LC TFT color display (9.5")							
Resolution	640 × 480 pixels (VGA resolution)							
Pixel failure rate	$<2 \times 10^{-5}$							
Mass memory	1.44-Mbyte 3 1/2" diskette (built-in disk drive), harddisk							
Operating temperature range								
Nominal temperature range	+5 to +40°C							
Limit temperature range	+0 to +50°C							
Storage temperature range	–40 to +70°C							
Climatic loading	+40°C at 95% relative humidity (IEC 68–2–3)							
Mechanical stress								
Sinusoidal vibration	5 to 150 Hz, max. 2 g at 55 Hz; 0.5 g from 55 to 150 Hz; to IEC 68-2-6, IEC 68-2-3, IEC 1010-1, MIL-T-28800D, class 5							
Random vibration	10 to 300 Hz, acceleration 1.2 g_{rms}							
Shock	40 g shock spectrum, to MIL-STD-810C and MIL-T-28800D, classes 3 and 5							
Recommended calibration interval	1 year (2 years for operation with external reference)							
RFI suppression	to EMC directive of EU (89/336/EEC) and German EMC legislation							
Power supply								
AC supply	200 to 240 V: 50 to 60 Hz, 100 to 120 V: 50 to 400 Hz, class of protection I to VDE 411							
Power consumption	170 VA	180 VA	185 VA	195 VA	220 VA	230 VA	220 VA	230 VA
Safety	to EN 61010-1, UL 3111-1, CSA C22.2 No. 1010-1, IEC 1010-1							
Test mark	VDE, GS, UL, cUL							
Dimensions in mm (W x H x D)	435 × 236 × 460 (5 units of height)					435 × 236 × 570	435 x 236 x 460	435 x 236 x 570

Specifications

Increased Level Accuracy FSE-B22

Total level error	≤0.5 dB with 10 dB RF attenuation ≤0,6 dB with 20/30/40 dB RF attenuation
Specifications are valid for:	
Temperature range	20 to 30 °C
Frequency range	10 MHz to 2 GHz
Resolution bandwidths	5 to 30 kHz/300 kHz/1 MHz
Signal level	–10 to –50 dB below reference level
Stop frequency	≤2 GHz
Sweep time	≥3 x auto sweep time

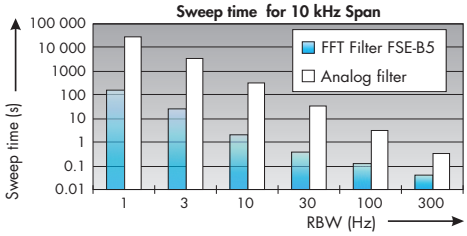

TV Demodulator FSE-B3

(All specifications apply to design parameters and are not tested)

Video output	
Output voltage into 75 Ω	1 V_{pp}
Video polarity	positive/negative (switchable, eg standard B/G, L)
Frequency response 0 to 4.43 MHz	–2 dB
Video S/N ratio	
(rms, to CCIR, level >3 mV)	55 dB
Nonlinearity in case of	
10 to 75% modulation	
Differential gain	10%
Differential phase	10 °
2-T-k factor	3%
Triggering	
TV trigger	vertical and horizontal TV sync signals, any line within a 625- or 525-line system
Standards	B/G, D/K, I, L, M

FFT Filter FSE-B5 (standard in models .30)

Resolution bandwidths (RBW)	
3 dB bandwidths, in 1/2/3/5 steps	1 Hz to 1 kHz
Bandwidth error, nom.	2%
Shape factor 60:3 dB, nom.	2.5
Display range for frequency axis	
Min. span	25 x RBW
Max. span	100 000 x RBW, max. 2 MHz
Level measurement error	
Additional total level error	
referred to RBW 5 kHz	<1 dB
Max. display range	100 dB
Immunity to interference	
Spurious response	≤100 dBm

FFT Filter FSE-B5

- High frequency resolution due to very small shape factor of 2.5
- Extremely short measurement time, up to 150 times faster than with conventional filters

1) Options FSE-B16 and FSE-B17 require option FSE-B15.
2) Cannot be retrofitted, factory-fitted only.

Important Hints before Operation:

For instruments without the computer function FSE-B15:

- The disks used must have been formatted by the FSE itself or by MS-DOS. Pre-formatted disks can cause errors.

For instruments with the computer function FSE-B15:

- The drives D: and Q: are reserved for system software and must not be altered. Any changes in the drives D: and Q: can cause function errors.
- When operating a PS/2 mouse, a mouse driver has to be loaded via the designated entry in the autoexec.bat file.
- The files AUTOEXEC.BAT and CONFIG.SYS are write protected. User-specific programs which are to be executed automatically during the system startup must be entered in the file C:\AUTOUSER.BAT. Network drivers for option FSE-B16 must be entered in the file C:\NETWORK.BAT.
- After switching on the instrument, the startup process can be interrupted if required. This is achieved by pressing any key on the external keyboard repeatedly until "ABORT SYSTEM BOOT [Y/N?]" is queried on the display. The instrument works then in the DOS mode.

For all instruments:

- Aborting a hardcopy is not possible when printout is in progress. Print jobs in the queue can be deleted before printout has been started by pressing the HARDCOPY START key until the message "Hardcopy in progress. Abort?" is displayed. The length of the queue is two jobs.

Safety Instructions

This unit has been designed and tested according to the standards outlined overleaf and has left the manufacturer's premises in a state fully complying with the safety standards.
In order to maintain this state and to ensure safe operation, observe the following instructions, symbols and precautions.

1. The unit may be used only in the operating conditions and positions specified by the manufacturer. Unless otherwise agreed, the following applies to R&S products:

   Pollution severity 2, overvoltage category 2, IP degree of protection 2X, altitude max. 2000 m.

   The unit may be operated only from supply networks fused with max. 16 A.

2. For measurements in circuits with voltages V_{rms} > 30 V, suitable measures should be taken to avoid any hazards.

   (using, for example, appropriate measuring equipment, fusing, current limiting, electrical separation, insulation).

3. If the unit is to be permanently wired, the PE terminal of the unit must first be connected to the PE conductor on site before any other connections are made (installation and cabling of the unit to be performed only by qualified technical personnel).

4. For permanently installed units without built-in fuses, circuit breakers or similar protective devices, the supply circuit must be fused such as to provide suitable protection for the users and equipment.

5. Prior to switching on the unit, it must be ensured that the nominal voltage set on the unit matches the nominal voltage of the AC supply network.

   If a different voltage is to be set, the power fuse of the unit may have to be changed accordingly.

6. Units of protection class I with disconnectible AC supply cable and appliance connector may be operated only from a power socket with earthing contact and with the PE conductor connected.

7. It is not permissible to interrupt the PE conductor intentionally, neither in the incoming cable nor on the unit itself as this may cause the unit to become electrically hazardous.

   Any extension lines or multiple socket outlets used must be checked for compliance with relevant safety standards at regular intervals.

8. If the unit has no power switch for disconnection from the AC supply, the plug of the connecting cable is regarded as the disconnecting device. In such cases it must be ensured that the power plug is easily reachable and accessible at all times (length of connecting cable approx. 2 m). Functional or electronic switches are not suitable for providing disconnection from the AC supply.

   If units without power switches are integrated in racks or systems, a disconnecting device must be provided at system level.

9. Applicable local or national safety regulations and rules for the prevention of accidents must be observed in all work performed.

   Prior to performing any work on the unit or opening the unit, the latter must be disconnected from the supply network.

   Any adjustments, replacements of parts, maintenance or repair may be carried out only by authorized R&S technical personnel.,

   Only original parts may be used for replacing parts relevant to safety (eg power switches, power transformers, fuses). A safety test must be performed after each replacement of parts relevant to safety.

   (visual inspection, PE conductor test, insulation-resistance, leakage-current measurement, functional test).

10. Any additional safety instructions given in this manual are also to be observed.

Safety-related symbols used on equipment and documentation from R&S:

						
Observe operating instructions	Weight indication for units >18 kg	PE terminal	Ground terminal	Danger! Shock hazard	Warning! High temperatures Warning! Hot surfaces	Ground

Patent Information

This product contains technology licensed by Marconi Instruments LTD. under US patent 4609881 and under the corresponding patent in Germany and elsewhere.

ROHDE&SCHWARZ

EC Certificate of Conformity

CE

Certificate No.: 9502052

This is to certify that:

Equipment type	Order No.	Designation
FSE-B1	1073.4990.02	Color Display
FSE-B10	1066.4769.02	Tracking Generator
FSE-B11	1066.4917.02	Tracking Generator
FSE-B12	1066.5065.02	Output Attenuator
FSE-B15	1073.5696.02/.03	Computer Function
FSE-B16	1073.5973.02/.03	Ethernet Interface
FSE-B17	1066.4017.02	2nd IEC BUS Interface
FSE-B2	1073.5044.02	7 GHz Frequency Extension
FSE-B21	1084.7243.02	External Mixer Output
FSE-B3	1073.5244.02	TV Demodulator
FSE-B4	1073.5396.02	OCXO 10 MHz and Low Phase Noise
FSE-B7	1066.4317.02	Signal Vectoranalysis
FSE-B77	1102.8493.02	Signal-Vectoranalysis
FSE-B8	1066.4469.02	Tracking Generator
FSE-B9	1066.4617.02	Tracking Generator
FSE-Z2	1084.7043.02	PS/2 Mouse

complies with the provisions of the Directive of the Council of the European Union on the approximation of the laws of the Member States

- relating to electromagnetic compatibility
  (89/336/EEC revised by 91/263/EEC, 92/31/EEC, 93/68/EEC)

Conformity is proven by compliance with the following standards:

EN50081-1 : 1992
EN50082-1 : 1992

Affixing the EC conformity mark as from 1995

ROHDE & SCHWARZ GmbH & Co. KG

Artisan Technology Group is an independent supplier of quality pre-owned equipment

Gold-standard solutions

Extend the life of your critical industrial, commercial, and military systems with our superior service and support.

We buy equipment

Planning to upgrade your current equipment? Have surplus equipment taking up shelf space? We'll give it a new home.

Learn more!

Visit us at **artisantg.com** for more info on price quotes, drivers, technical specifications, manuals, and documentation.

Artisan Scientific Corporation dba Artisan Technology Group is not an affiliate, representative, or authorized distributor for any manufacturer listed herein.

We're here to make your life easier. How can we help you today?
