Product Details: PMC-UltraSCSI
PMC-USCSI

Ultra SCSI PMC Module

Product Description

The PMC-UltraSCSI provides a high performance UltraWide SCSI (Fast-40) adapter solution for a PMC carrier board in VME, CompactPCI, or PCI-based systems. It is an ideal module for disk, tape, CD-ROM or other storage media and SCSI peripheral applications.

The module supports single-ended or differential signaling for asynchronous or synchronous SCSI operations.

Flexible physical I/O access is available via a 68-pin SCSI-III front panel connector or the PMC back panel P4 connector.

The PMC-UltraSCSI features the LSI Logic SYM53C875 UltraWide SCSI (Fast-40) controller, with SCSI SCRIPTS processor support. It allows bus transfer rates up to 40 MB/sec synchronous across a 16-bit bus. In addition, 4KB of on-chip static RAM is available for SCSI SCRIPTS instruction storage to control the SCSI device.
The PMC-UltraSCSI supports DMA with 536 bytes of FIFO. The FIFO has burst length of up to 128 transfers to allow maximum bandwidth. Interrupt is supported via PCI pin INTA#.

VxWorks, LynxOS, and Windows NT device drivers are available for the PMC-UltraSCSI (single-ended signaling only). The module is compliant with standard single-wide PMC specifications IEEE P1386.1 and PCI Specifications.
