# Product Description

The CP-340 mezzanine carrier board holds one PCI Mezzanine Card (PMC) with front - panel I/O support in a single 3U CompactPCI® slot. The CP-340 is ideal for use in high-performance industrial, COTS, and telephony CompactPCI systems that require I/O expansion using the PMC form factor.

Using the industry standard Intel 21154-BC PCI-to-PCI Bridge, the CP-340 supports a 64-bit data path at 66 MHz, for 512 MB/s operation. The PMC site supports bus mastering.

The CP-340 carrier board complies with the PICMG 2.0, version 3.0 CompactPCI specification.

## Key Features

3U CompactPCI carrier board holds one PMC

64-bit, 33/66 MHz, up to 512 MB/s operation

Full hot swap capability

Status LEDs for Power (green) and Hot Swap (blue)

Intel 21154-BC PCI-to-PCI Bridge

Supports standard (IEEE1386.1) PMCs

CompactPCI specification, PICMG 2.0, version 2.1 compliant

Front-panel I/O supports PMC site

5V PCI signaling for the PMC site (CP-340-5) or 3.3V PCI signaling (CP-340-3)

# PMC Slots

## Overview

A PMC slot is provided, as shown in Figure 1:

Figure 1: PMC Slot Assignments

## PCI Slots

Each slot is a hard-wired PCI slot and has front and back-panel I/O access as shown in Figure 2:

Slot	Card	Front-Panel I/O Location	Bus Master
4	PMC	On card	Yes

Figure 2: PMC Slot Compatibility Summary

## PCI-to-PCI Bridge

The PCI bridge chip, an Intel 21154-BC, is a transparent 32/64-bit, 33/66 MHz device. The PMC on the carrier is visible to the system CPU.

The wiring of the bridge to the PMC slots controls the mapping of PCI slot numbers to physical slots. The PCI slot for the PMC is 4.

The bridge implements the interrupt mapping for the PMC slot. This mapping is defined by the PCI specification.

The bridge implements the bus mastership control for the PMC slot. A two-level round-robin arbiter selects one master between slot 4 and the host PCI bus. Figure 3 lists the salient configuration registers:

Location	Value	Description
Vendor ID	0x1011	Intel, the manufacturer of the chip
Device ID	0x0026	21154-BC PCI to PCI Bridge chip
Revision	0x0005	21154-BC chip revision

Figure 3: PCI Configuration Registers

## CompactPCI Hot Swap

The CP-340 hot swap functionality is implemented using the “alternate register” method as defined in section 2.3.2.4 in the PICMG 2.1 R1.0 CompactPCI Hot Swap Specification. The 21154 PPB is not hot swap “silicon friendly”. That is, it does not have the hot swap Control and Status register as part of its configuration registers.

A General Purpose I/O (GPIO) register is located in the 21154’s configuration registers. This register has 4 bits, each of which can be programmed as input or output. Also, each of these 4 bits corresponds to an I/O pin on the 21154 PPB. Bit GPIO<3> is defined as the INS bit, Bit GPIO<2> is defined as the EXT bit, Bit GPIO<1> is defined as the LOO bit, and Bit GPIO<0> is defined as the EIM bit.

## Hot Swap Register

The Hot Swap register starts at offset 65H (GPIO Output Data) from the 21154’s PCI configuration space. The LOO and EIM bits are output only, while the INS and EXT bits are inputs as well as outputs. Therefore, the pins must be configured as input during read cycles and, whenever a write must be performed, the pins must then be set to output and then back to input. The reset configuration is input.

Figure 4 shows the Hot Swap register.

MSB								LSB								Bit
31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	Register
GPIO Input Data								GPIO Output Enable Control								Register
INS	EXT	X	X	X	X	X	X	1= INS out	1= EXT out	1= LOO out	1= EIM out	1= INS in	1= EXT in	X	X	Bits Definition

MSB								LSB								Bit
15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0	Register
GPIO Output Data								P serr   Event Disable								Register
1= INS set	1= EXT set	1= LOO set	1= EIM set	1= INS clear	1= EXT clear	1= LOO clear	1= EIM clear									Bits Definition

**Figure 4: Hot Swap Register**

# Connectors

## Overview

Connectors are fitted as shown in Figure 5.

Connector	Wired To	Description
J1	PCI Bridge	CompactPCI bus
J2	PCI Bridge	CompactPCI bus
J11, J12, J13	PCI Bridge	PCI bus for slot 4

# Specifications

Form Factor	3U CompactPCI
PMC Sites	One
Carrier Interface	CompactPCI, PICMG 2.0, version 2.1 compliant
PCI	PCI Specification, Revision 2.2 compliant
PMC Interface	IEEE1386.1 PMC
PCI Bridge	Intel 21154-BC PCI-to-PCI Bridge
PCI Bus Master	PMC slot through a transparent bridge
I/O Access	Front panel
Power Requirements	+3.3 VDC, 90 mA max Additional power consumed by PMCs
Dimensions	100 mm x 160 mm
Weight	0.26 kg (0.56 lb)
Environmental	Operating temperature: 0° to 70° C Humidity: 5% to 95% non-condensing Storage: -40° to +85°C

# Repair

## Service Policy

Before returning a product for repair, verify as well as possible that the suspected unit is at fault. Then call the Customer Service Department for a RETURN MATERIAL AUTHORIZATION (RMA) number. Carefully package the unit, in the original shipping carton if this is available, and ship prepaid and insured with the RMA number clearly written on the outside of the package. Include a return address and the telephone number of a technical contact. For out-of-warranty repairs, a purchase order for repair charges must accompany the return. SBS Technologies will not be responsible for damages due to improper packaging of returned items. For service SBS Technologies products not purchased directly from SBS Technologies, contact your reseller. Products returned to SBS Technologies for repair by other than the original customer will be treated as out-of-warranty.
